PALL MALL

Reports by Her Majesty's Secretaries of Embassy and Legation, on the Manufactures, Commerce, &c., of the Countries in which they reside.

Italy.

Report by Mr. West, Her Majesty's Secretary of Legation.

Turin, July 5, 1863.

THE statistical information compiled by the Minister of the Interior enables me to offer some remarks respecting the territory and the amount and distribution of the population of the Kingdom of Italy as at present constituted.

The fifty-nine provinces or departments into which it is divided are enumerated in the annexed Table, together with the superficies and population. It will be seen that the population, amounting to 21,703,710 inhabitants, is very unequally distributed.

Provinces and Prefectures.	Superficies in Square Chilos.	Population.	Population per Square Chilo.	Provinces and Prefectures.	Superficies in Square Chilos.	Population.	Population per Square Chilo.
1. Alessandria ..	5,052·95	637,629	126·10	32. Lucca	1,450·34	242,542	167·23
2. Ancona	1,140·16	257,122	224·73	33. Macerata ..	3,136·28	239,411	76·33
3. Aquila	6,544·44	339,555	51·87	34. Massa	1,177·58	147,838	125·26
4. Arezzo	3,309·20	222,654	67·28	35. Messina ..	4,158·08	378,003	90·90

28. Girgenti ..	3,290·46	252,763	76·81	59. Trapani ..	2,599·45	205,556	79·07
29. Grosseto ..	4,396·97	82,540	18·77				
30. Lecce	8,588·72	448,465	49·88	Total ..	255,617·29	21,703,710	84·90
31. Livorno	315·39	113,309	327·55				

The Lombard provinces contain the largest per-centage, and those of the Island of Sardinia the smallest.

The six most populous cities are—

	Inhabitants.		Inhabitants.
Naples, with	417,436	Turin, with..	179,610
Milan, „	219,482	Genoa, „	119,610
Palermo, „	186,170	Florence, „	114,500

Although these figures are official, I believe that a considerable increase has lately taken place. Turin, for instance, now contains 200,000. There are 22 towns, containing a population of over 25,000, and less than 100,000; and 20 contain from 20,000 to 25,000 inhabitants; 33 towns contain a population below 20,000 and above 15,000, and 7,658 below the latter amount. The smaller towns, therefore, are most numerous, owing to the decided preponderance of the agricultural population. According to the most recent Returns the births exceed the deaths in the proportion of 100 to 84; thus the annual increase would be 118,000. The average of life is 33 years, which is, I believe, less than that in England and France. In former times certain exemptions from taxation and premiums were accorded to fathers of a certain number of children in order to promote as much as possible marriage and the increase of population. These Laws and Decrees are curious, as showing the importance formerly attached to this subject. They have been gradually rescinded, and were finally abolished in 1862.

The whole superficies of the 59 departments contains 25,561,729 hectares, of which 3,969,279 are composed of mountains, rivers, roads, and cities.

The 21,592,450 hectares are divided as follows:—

Old Provinces	5,333,845	Romagna	963,135
Lombardy	1,680,948	Marches	924,575
Modena	488,176	Naples	6,255,320
Parma	525,320	Umbria	945,075
Tuscany	2,073,958	Sicily	2,402,098

And the number of proprietors is 4,153,645. About 6 hectares of land, therefore, may be apportioned to each.

The distribution of the proprietors and the populations over the kingdom is as follows:—

Region.	Population.	Proprietors.	Region.	Population.	Proprietors.
Old Provinces	4,079.678	1,000,000	Romagna	1,014,582	87,137
Lombardy	3,027,018	521,900	Marches	902,970	151,858
Modena	643,887	95,000	Umbria	492,829	83,900
Parma	468,636	80,000	Naples	7,061,952	1,400,000
Tuscany	1,792,243	133,850	Sicily	2,221,744	600,000

It appears, therefore, that the number of proprietors in Piedmont and Sicily is a little less than a fourth of the population; in Lombardy, Umbria, Parma, and Modena about a sixth part; in Tuscany and the Romagna three-tenths; in the Marches a ninth; and in Naples between a fourth and a fifth. Property, therefore, is more broken up in Piedmont, Sicily, and Naples; not so much so in Lombardy, the Emilia, and Umbria, and is very much concentrated in Tuscany and the Romagna.

Generally speaking, small properties preponderate throughout the kingdom. To enter into the causes of this and trace the effect it may have had in retarding agricultural progress would occupy too much space in a purely statistical Report.

The approximate net income derived from the 21,572,450 hectares is calculated at 1,008,000,000 francs, which gives an average value of 51 francs 31 centimes per hectare.

The following is the value of land in the different parts of the Kingdom:—

	Net Revenue, per hectare. Fr. c.		Net Revenue, per hectare. Fr. c.
Old Provinces	36 65	Romagna	57 10
Lombardy	89 53	Marches	43 26
Modena	62 47	Umbria	26 45
Parma	50 44	Naples	47 95
Tuscany	40 98	Sicily	41 63

Landed property pays taxes and imposts to the amount of 170,716,878 francs. Each hectare is therefore burthened with a tax of 7 francs 90 centimes. This sum is, however, an average; property in the different provinces paying according to the following rates:—

	Per hectare. Fr. c.		Per hectare. Fr. c.
Piedmont	6 19	Romagna	14 22
Lombardy	21 61	Marches	6 24
Modena	11 4	Umbria	3 47
Parma	10 94	Naples	6 55
Tuscany	7 0	Sicily	4 95

Thus it appears that landed property in Naples and Umbria pays the minimum of the taxation, and that in Lombardy and the Romagna the maximum, land in the former province paying more than double than that in Modena and Parma, four times as much as in Piedmont, Marches, Tuscany, and Sicily, and about three times as much as in the Neapolitan provinces. If the provincial and communal charges are not taken into account, the taxation will be found as follows—of the income—

Piedmont pays . ..	one-tenth.	Romagna, pays . ..	one-tenth.
Lombardy	over one-seventh.	Marches	one-eleventh.
Modena	one-ninth.	Umbria	one-tenth.
Parma	one-seventh.	Naples	over one-ninth.
Tuscany	one-eleventh.	Sicily	one-eleventh.

I shall conclude these observations by stating that the landed property in Italy is burthened by charges and mortgages to the enormous amount of 4,694,493,619, or about 188,000,000*l*. Each hectare on an average, therefore, is mortgaged to the amount of 217 francs 41 centimes, represented by a capital of 1,167 francs 7 centimes. Thus more than a fifth of the whole landed property of the kingdom is under mortgage.

I have in a previous Report given some statistics of a similar nature as the above, but I am now enabled to give them in a more accurate form, and I believe they may be considered as correct. I need scarcely remark that such a state of things requires most careful legislation with a view to ameliorate the condition of the landed interest, and to stimulate the natural production of the soil.

I shall now endeavour to give a fuller account of some of the natural productions of the soil than I have hitherto been enabled to do.

Wood.—Throughout Italy the calculation is 1 hectare of woodland to 6·47 open. The Province of Leghorn contains 1 hectare of wood to 1·76 open land.

Massa-Carrara	1 to 2·32	Bergamo	1 to 3·32
Genoa	1 to 2·43	Florence	1 to 3·71
Perugia	1 to 2·74	Arezzo	1 to 4
Porto Maurizio	1 to 2·77	Parma	1 to 4·42
Sassari	1 to 2·75	Reggio (Emilia)	1 to 4·34
Como	1 to 2·82	Siena	1 to 4·74
Cagliari	1 to 2·52	Novara	1 to 4·49
Brescia	1 to 3·26	Aquila	1 to 5·02

The other communes average from 1 to 6 to 1 to 12 and 24 hectares. Considering the extent of forest land and the quality of the timber, it is surprising that more care has not been taken to prevent the wholesale destruction of trees, and that attention has not been given to the introduction and cultivation of many foreign trees which would doubtless thrive well in so favourable a climate. The forest laws are of no avail to protect the woods belonging to the communes, who, blind to their own interests, suffer the mountain-sides gradually to be denuded, taking no thought for the future. It must be remembered, also, that Italy is almost entirely dependent on her woods for fuel, which has arisen to such an exorbitant price as to prevent the poorer classes in the winter months from obtaining it.

Grain.—It is calculated that the average annual production of grain in Italy is 35,000,000 ettolitres—a quantity insufficient to meet the demands of the population. Italy imports, therefore, considerable quantities from Russia, Egypt, and from America. An hectare will produce from 15 to 27 ettos, and the quantity of seed per hectare is 1·80 to 2·80 ettos. It is certain that the agricultural produce might be enormously increased, and that Italy would become a large grain-exporting country. The heavy burthens on landed property make it necessary to offer every facility for obtaining foreign capital on easy terms, and this will be done in some measure by the institution of the "Credito Fondiario."

On the Cultivation of Cotton and Rice in Italy.

The cultivation of cotton in Italy dates as far back as the year 1000. It appears at that time to have been one of the chief agricultural productions of the

country, and to have been extensively grown in the Island of Sicily. The Venetians cultivated it in the Island of Cyprus, and produced annually more than 6,000,000 lbs. It was, in fact, the only cotton which competed with the East Indian cotton previous to the introduction into Europe of the American produce. During the wars of the Emperor Napoleon I its cultivation increased considerably in Italy; but on the re-establishment of peace, and the consequent throwing open of foreign markets, it fell off. As long as the Continental system remained in force it was grown even in the northern provinces, about Bologna, Ferrara, Verona, and the Milanese—a fact which proves at least the capabilities of the soil of most parts of Italy for its production. The region best fitted for it, however, seems to be south of a line drawn from Tronto, on the Adriatic, to Piombino, on the Mediterranean, latitude 43° north, extending to the southernmost point of the Island of Sicily, and including the Island of Sardinia. This region contains 154,000 square kilometres, of which it is said 22,000 kilometres could be brought under cotton cultivation. The population consists of about 10,000,000. An hectare, it is calculated, will produce from 500 to 1,200 lbs. About Naples and Salerno as much as 1,400 lbs. have been obtained. A systematic cultivation would perhaps produce an average of 900 lbs. per hectare.

Two species of cotton have usually been sown in Italy, namely, "Gossypium Herbaceum" and "Gossypium Siamense." The question, then, at once arises as to whether these two species grown in Italy can ever successfully compete with the American or even East Indian produce in the European market. A favourable report appears to have been made on some samples sent to England, but this cannot be taken as satisfactorily answering the question. Careful practical experiments can alone prove how far any successful competition can be anticipated. The Italian Government have now turned their attention to this subject, owing to the decided increase which has taken place in the cultivation of cotton in the Neapolitan provinces within the last two years. Under the old Protective system, and previous to the American war, the Neapolitan provinces produced 7,000,000 lbs. annually. When the high duties ceased with the introduction of the Italian Tariff the produce fell off to about one-half, but it is thought that this year's crop will give over 7,000,000 lbs.

I will now state some of the arguments urged by persons, certainly capable of forming an opinion on the subject, in favour of an extension on a large scale of cotton cultivation in Italy, with a view of successfully competing with the American produce.

It is argued that no grower in America can produce cotton unless he can sell it at 4*d.* per lb., or 88 centimes the kilogramme; and that profit cannot be made under the sale of 5*d.* per lb. Cotton could be grown in Italy with profit at 88 centimes the kilogramme. An hectare produces 450 kilogrammes, which sold at this price would realize 396 francs. Now the expense of cultivation is about one-half of this sum, so that there would be a net profit of 180 francs per hectare. It is further urged that whereas the price of cotton will probably henceforth be 6*d.* per lb., or 33 francs per kilogramme, this profit will be increased to 300 francs per hectare. Thus it is sought to be proved that the cost of cultivation in Italy is less and profit greater than in America. Many other arguments are brought forward to show the great advantage which agriculture in general would derive from cotton-growing. Vast tracts of land now uncultivated would be turned to profitable account. An improved system of labour would be introduced, and a most valuable article of export be created. An abundant population and a low price of labour are natural advantages which Italy is said to possess for this peculiar cultivation.

These arguments are doubtless plausible. There is, however, the one question which has not been satisfactorily decided, namely, is the quality of the cotton capable of competing with American produce in the European market? If not, cotton-growing in Italy must end in failure and loss.*

Rice is more extensively cultivated in Italy than in any other part of Europe, although the date of its introduction is comparatively recent. Its cultivation for sanitary reasons has always been more or less restricted by legislative measures, and the question as to whether it is really pernicious or not to the health of the surrounding populations has ever been and still is seriously discussed.

* Since the above was written, I have obtained the following information respecting the growth of cotton in Sicily:—Not less than 20.000 acres of land are under cotton cultivation this year, and the yield is expected to reach 100,000 bales of 300 kilos each.

The rice which is grown in Italy must be cultivated under a system of irrigation. There does not appear to be sufficient humidity in the air to admit of the successful cultivation of the species "mountain rice" ("riso di montagna"), which was brought by M. Poivre from Cochin China to the Mauritius, from whence it was subsequently brought to Europe where it is proved to have germinated and come to maturity in climates possessing the requisite amount of humidity. Neither the Greeks nor Romans appear to have cultivated rice, although it is certain they knew of such produce as coming from Asia by the Red Sea to the ports of the Mediterranean. The Arabs are supposed to have cultivated it, and to have introduced it into Egypt and the southern parts of Europe with which they came into contact, but nothing is certain as to its existence in Europe until its introduction into Spain by the Moors in 1324, although a certain Peter Crescentius mentions it as growing in the marshy lands about Bologna as early as 1301. There are legislative enactments extant of Francesco Sforza and Ludovico the Moor, which prove that it was cultivated to a considerable extent in the Milanese in the fifteenth century.

In the year 1585 the Spanish Governor of Milan, the Marquis Aymonte, prohibited it as a pestiferous production.

Notwithstanding, however, all efforts to restrict its extension, it continued to spread throughout Italy, especially on the coasts of the Adriatic about Venice and Ancona, and in the valley of the Po.

In Spain and Portugal sufficient care and attention were not bestowed on its cultivation as to render the crop important. It was grown to some extent in some parts of France until Cardinal Fleury put a stop to its cultivation, and at the present time it is by no means a profitable speculation.

In Italy, however, the contrary is the case, and the crop is most remunerative, but it is a matter of serious consideration for the Government to decide the question as to its pernicious effect on the health of the population, and if necessary to adopt the most judicious measures to prevent the evil consequences consequent on an undue extension of its cultivation near great towns.

As before said, rice in Italy flourishes only under irrigation. It must be kept under water during the whole period of its vegetation, and in consequence there are only particular districts suitable for its production, and which will not produce other crops. Indeed, such lands could only be employed for the growth of rushes and canes. Wherever, therefore, it is possible to turn such lands into rice-grounds the proprietors will do so. And here the question naturally arises as to whether lands under rice cultivation are more unhealthy than marshes and swamps.

The rice-grounds in Italy may be divided into the following classes:—

1. Lands which are always more or less under water, and which are too wet for other crops of any kind.

2. Lands which can be irrigated at pleasure, and which admit of a system of cropping.

3. Lands which retain a certain amount of moisture from the rains. These latter are to be found in parts of central Italy, but the rice cultivation here oftentimes ends in complete failure.

4. Lands near the mouths of the Po, which are inundated at certain periods with the water which the rise of the Adriatic keeps back.

The first yield 50 per cent. fine rice; the second, 40 to 45 per cent.; and the others from 35 to 36 per cent. On the lands about Vercelli it is calculated that the flow of water over the land necessary is 0·92 litres per hectare. In the more sandy soils this quantity must be augmented to 1·25 litres per hectare. In the first instance, therefore, there is a daily flow of 79·5 cubic metres of water, and in the second as much as 107·4 cubic metres.

The depth of this latter quantity on an hectare would not be more than 1 centimetre, which would be insufficient to produce the requisite flow, to obtain which the lands are divided into compartments, and the water passed from one to the other. A gentle flow is generally considered best, as the action of the sun on the water is conducive to the growth of the plant.

The best rice-grounds are those about Novara and Vercelli, and the Lomellino, some parts of the valley of the Po, and about Pavia. The cropping system prevails in the Lomellino, where there is a considerable quantity of chalk in the soil, as follows:—4 years' rice; 1 year's corn without manure; 1 year's oats with manure, and in the spring clover; 4 years' meadow when red and white clover are sown. In the more sandy soil where the absence of chalk does not admit of the growth of clovers, the meadow course is not adopted.

Much depends upon the temperature of the water. That of the Po near Chiavasso is considered most suitable. The waters of the Ticino and Sesia are also good, while the Dora Baltea is too cold. The rice is nearly always under water to the depth of 16 to 18 centimetres, never exceeding 50 centimetres. When the plant is sickly, the land is sometimes laid dry. Great attention must be paid to weeding, which is done by women and children in the water. The harvest takes place in August or September. The fields are then laid dry and the rice is reaped, tied in bundles, and then thrashed. The grain has, however, an outer coating, which it is necessary to remove, and this is done by the operation called "brillare il riso." There is room for much improvement as regards this operation, by the adoption of improved machinery. The quantity of rice produced per hectare varies considerably.

In Northern Italy a hectare is calculated to produce from 18 to 60 ettolitres, yielding from 35 to 50 per cent. white rice, or "riso brillato." In the Novarese and Lomellino the produce of a hectare is worth 450 francs, upon which there is a net profit of 280 francs. About Vercelli, Biella, and Casalasco, the net profit is about 240 francs.

The following is a Table of the produce of the produce of rice in Italy:—

Italian States.	Superficies.	Produce.	Italian States.	Superficies.	Produce.
	Hectares.	Ettolitres.		Hectares.	Ettolitres.
Continent	63,768	637,680	Modena	6,314	92,042

Roman States	6,933	208,192	Total	119,247	1,434,634
Tuscany	..	..			

From this Table it appears that the average production per hectare is a little more than 12 ettolitres. The annual produce being 1,434,634 ettolitres, and the average having been lately 28·91 francs per ettolitre, the total value of the crop can be set at 41,475,268 francs. This value might be largely increased by a more extensive cultivation. There are many parts of the Tuscan and Neapolitan Provinces admirably suited to the growth of rice, besides many portions of the Adriatic Coasts: 100,000 hectares more could easily be brought into cultivation. The question, therefore, as to whether the cultivation of a crop which is so renumerative is really so injurious to the health of the population as to call for legislative measures to restrict its greater extension, becomes a very important one. It has lately been fully treated in the Report of the Ministry of Commerce on the presentation to the Chamber of Deputies of a law respecting rice cultivation in Italy.

The conclusions come to appear to be, that if proper care is taken to prevent the water from becoming stagnant, and the system of alternate cropping is more generally adopted where it is possible, the health of the peasants will not suffer more than operatives engaged in other branches of industry not considered healthy. The marshes and swamps over which the fatal miasma is supposed to hang, lose much of this character when brought under rice cultivation. The necessity of obtaining a constant and regular flow of water prevents the possibility of the existence of stagnant pools and permanent swamps which are generally supposed to nourish the deadly fevers of Italy. The existence of malaria in districts formerly thickly inhabited and doubtless extensively cultivated, but now waste and barren, and in many cases marshes, would seem to be an argument in favour of bringing them again under cultivation, and thereby accumulating a population. It is true that the Greeks and Romans did not cultivate rice, but since it is generally thought that there is nothing pernicious in the plant itself, its cultivation could not add to the miasma existing, but on the contrary, for the reasons given before, diminish it.

It is proposed, therefore, in the new law which is to abrogate all previous legislation, decrees, and enactments respecting rice cultivation, to fix a certain distance from towns and habitations at which it may be cultivated. Certain regulations will be enforced as to the construction of houses near or about the rice-grounds. Great latitude is given to the local Government in carrying out the prescribed regulations according to the peculiarities of each district, and no general law is laid down applicable without exception to the whole of the rice-grounds in Italy.

Wine.—The annual production of wine is calculated at 28,034,000 ettolitres, which at 20 francs per ettolitre gives a value of 560,068,000 francs. According to tests made of the Italian wines during the exhibition at Florence, it seems that the

quantity of alcohol is—maximum, 14 per cent.; minimum, 4 per cent.; average, 9 per cent.; which is, I believe, less than that in the wines of France.

Tobacco.—The cultivation of tobacco is permitted under certain restrictions in different provinces. In Sicily, however, no restrictions exist. According to the Returns of the Ministry of Finance, under the jurisdiction of which Department the tobacco cultivation and sale is placed, the Government monopoly obtained, in the year 1861, 20,000 quintals of native-grown leaf, worth 1,600,000 francs, and purchased 100,000 quintals foreign, worth 12,600,000 francs. The native produce is calculated to supply only a sixth of the total consumption.

The quality of the leaf grown in Italy is tolerably good, and by declaring the cultivation free the Government would encourage another branch of industry, and manufacture cigars at least as good as the miserable production which they at present offer for sale.

The whole system of agriculture is capable of great improvement, and much may be done by improving the breed of sheep and cattle, and the establishment of associations on a large scale for this purpose. English capital and English enterprise applied to agricultural speculation in Italy could not fail, under judicious management, of meeting, not only with success, but with large remuneration.

(Signed) L. S. SACKVILLE WEST.

Greece.

Report by Mr. Rumbold, Her Majesty's Secretary of Legation.

Athens, July 10, 1863.

Population.

ACCORDING to the census taken on the 12th of March, 1861, the population of Greece then amounted to 1,096,810 inhabitants.

The preceding census, taken in 1856, presents the figure of 1,062,627 inhabitants, which, compared with the above figure, shows an increase of 34,183 inhabitants in five years, the annual addition to the population being 6,836 inhabitants, or 643 per 100,000.

I have other data by me, according to which the population consisted of 998,266 inhabitants in 1851, of 960,236 is 1845, and in 1836 (the first year in which a census of the Kingdom was taken) of 751,077 inhabitants. Taking the nine years' interval between 1836 and 1845 we shall find an annual increase of 23,239 inhabitants, in a great measure due to immigration. After the first establishment of the Kingdom, and again taking the ten years' interval between 1845 and 1856, we shall find an annual increase of 10,698 inhabitants. The population, therefore, would not seem to be progressing in a satisfactory ratio. Still it would not be safe to argue from these figures that the rate of increase is steadily diminishing. The censuses taken before the year 1856 can hardly be relied upon for exactness, and, probably, the only correct census of the population of Greece yet taken is that of 1861. Its operations were performed under the direction of the "Bureau d'Economie Publique," reorganized by the Law of April 5, 1859, and presided over by M. Jean Soutzo, honourably known as one of the first financiers and statistical writers of Greece.

In so small a population as the above it is both easy and interesting to ascertain the occupation and social standing of each member of the community. The two annexed Tables (Nos. 1 and 2) give a division of the inhabitants according to their trades and professions. The first is taken from a work descriptive of Greece in 1840; the second from the official papers respecting the census of 1861.

The class of agriculturists forms one-eighth of the entire population of the kingdom. The large number of shepherds speaks but little in favour of the material development of the country. They roam at large in the trackless wilds of the Morea and Continental Greece, and in times of trouble furnish ready recruits to the bands of brigands that disgrace the soil of Greece.

The Government and communal employés amounted in 1861 to 8,752. This would probably not be a correct figure at present, the Governments which have succeeded each other since the late Revolution having, in many instances, doubled and trebled the number of functionaries in various offices. Of the 42,680 boys who in 1861 attended school, but few will reach man's estate without putting forward claims to such Government employment. It were much to be desired that the same attention should have been paid to the moral as to the mental training of the Greek people.

Land.

The entire superficies of the kingdom is reckoned at 46,429,000 stremmata,* or 45,429 square kilometres. No general cadastral survey of the country has as yet been attempted. The vineyards, olive grounds, currant plantations, &c., have alone, to some extent, been measured out and valued. It is thus impossible to know with any precision the cultivated area of Greece. The clumsy machinery of the dîme tax, or tax of the tenth of the agricultural produce levied in kind, alone affords some means of arriving at a conclusion on the subject. Nothing can be more vague than the delimitation of property in Greece. Landed proprietors themselves are often at a loss to determine the limits or even the site of their property. A case recently came under my notice where the owner of a piece of waste land could not with any certainty ascertain its position. All he knew was that he was the owner of some ground situated between the Pnyx and the Hill of Philopappus; and an offer of purchase made to him by a friend of archæological tastes who wished to make excavations, fell to the ground in consequence of the inability of the proprietor to point out the exact spot.

About one-third of the country consists of mountains and rocks. One-fifth is covered with forests, in which great havoc is yearly made by the wandering shepherds, who ruthlessly set fire to the woods in order to obtain more pasture-land for their flocks. Probably one half of the entire superficies of the soil is available for cultivation, and of this barely half has been turned to account. Yet with the climate and the richness of the soil the agriculture of Greece ought to thrive, whilst at present it is in the rudest, most hopeless condition. In order to reclaim it from its present state it will, above all, be necessary to alter the system of taxation, and to construct roads. As one of the many instances of the bad effect of the want of communications it may be mentioned here that though the country is in many parts rich in forests, one of the chief articles of importation is timber for ship-building and other purposes.

Produce of the Soil.

Any inquiry into the statistics of production in Greece is stopped at the outset by the barbarous land tax or dîme, levied in kind. The same obscurity and doubt exist on this subject as have already been pointed out in the question of the division of the land. No statements respecting the produce of the soil, or the capabilities of Greece for supporting its population, have as yet been officially published. The system pursued towards agriculture is possibly felt to be so vicious as not to admit of open inquiry. It amounts, in fact, to a Government monopoly bearing most heavily on the whole agricultural population, and putting a stop to all enterprise, and to any attempt at improvement. The principal evils of this state of things have lately been graphically described by Mr. Finlay in his able Memoir on "the rude condition of agriculture in Greece." But it may be remarked here on the authority of M. Delyanni, who, though at present Minister for Foreign Affairs, is intimately acquainted with the internal economy of Greece, that, financially speaking, no tax can be more disastrous, since the arrears of payment on the dîme alone amount to 100,000,000 drachmas since the year 1830. From the year 1845 to 1861 the revenue derived from the tenths, including the rent charge on national lands, had increased only from 5,500,000 to 7,473,700 drachmas; yet, as shown above, 140,000 inhabitants had been added to the population during that period.

* About 2½ stremmata are equal to an English acre.

The agriculturist is being constantly undersold in the market by the Government sales of grain; the want of roads so materially increases the cost of transport as to discourage all attempts at selling the grain at any distance from the place of production; and it is a known fact that where there would be more than enough to feed the entire population foreign grain imported from the shores of the Black Sea competes successfully with the native produce.

The annexed Tables (Nos. 3 and 4) show the production for the years 1857 and 1858. The former may be considered as an average year; the latter was one of great dearths, and large importations of foreign grain took place. These Tables have not been published, and I am indebted for them to a private source. I have thus been unable to obtain any of a more recent date. The harvest this year is fortunately most abundant. The price of wheat averages from 6 to 11 drachmas the kilogramme;* that of barley, from 3 to 5 drachmas the kilogramme.

Notwithstanding the excessive dryness of the climate and the torrid heat of summer, the soil when turned up, and only superficially raked as by the rude plough of the time of Hesiod, to this day used by the Greek husbandman, is generally found to be most fertile. A proprietor in Eubœa bought some land which had been under cultivation, but had been left fallow for some time previous to his purchase. Although contiguous to his former property, and the soil being to all appearance similar, the crops on his new acquisition were much heavier and yielded superior grain. When the causes of this difference were inquired into it was found that the former owner had cultivated madder or "garance," a plant largely used for the dye of the nether habiliments of the far-famed "fantassin" of France, and which requires a far more searching investigation of the soil than the superficial scratches which constitute the furrows of Greek husbandry. As in Eubœa, so in other parts of Greece. Even beneath the desolate stony wastes of Attica in many places lies all the wealth of a virgin soil. Remove but the hard, sun-dried surface, and a rich brown loam will turn up, at sight of which the hearts of our English farmers would be gladdened. But nothing is done; no water is brought from the neighbouring ranges of Parnes and Pentelicus to refresh it; no hand is raised to weed out the stones and cut down the rank overgrowth of evergreens and brushwood; and all the year round the cold blasts from the north sweep over the dreary plain, and the pitiless sun pours down its scorching rays on a parched stony desert. The old myth of Deucalio is forgotten indeed.

Further Tables annexed to this Report (Nos. 5, 6, and 7) show the produce of the vineyards, olive groves, currant plantations, &c., in the year 1858, and contain an enumeration of the cattle, beasts of burden, &c., in the kingdom in 1859, together with a comparative statement of the rearing of cattle, &c., from 1852 to 1858. According to these Tables a large increase in all kinds of live stock seems to have taken place in 1859. I have not been able to procure more recent data on these subjects. As regards the currant and cotton crops, however, I am indebted to Her Majesty's Consuls for some interesting information.

Currants.—The cultivation of the currant plant in the Morea is rapidly increasing. My informant, Mr. Wood, of Patras, says that "new plantations are yearly made where the ground is suitable, and where the peasants can obtain leave from the Government, or are enabled to purchase land and clear it of brushwood."

In 1858 the currant plantations covered an area of 153,058 stremmata; this year Mr. Wood reckons the land planted and in full bearing at 150,000 stremmata, besides 50,000 stremmata in various stages of bearing. The currant vine is seven or eight years before producing a full crop, and the average yield of a stremma of land is about 500 lbs. The yearly expense of cultivation, including sulphuring, is about 30*s.* per stremma, and the average price paid for currants last year was 11*s.* per 100 lbs, leaving about 25*s.* per stremma for interest on the value of the land.

In 1858 the currant crop amounted to 69,295,450 lbs. (Venetian), or 32,408 tons; in 1860 it amounted to 37,366 tons, and in 1861 to 32,660 tons. Mr. Wood observes, however, that no proper calculation as to the progressive increase of the crop of currants can be made because of the oidium which attacked the vine in 1852 and 1853. Even now this blight is kept out only by the repeated use of sulphur during the vegetation of the plants, and by powdering the fruit with it two or three times during the growth.

The quantity of currants exported from Greece of the crop of 1862 amounted

* 8½ kilos equal to 1 Winchester quarter.

to 35,903 tons, besides about 250 tons made use of for distilling purposes on the spot.

The crop was shipped as follows :—

	Tons.		Tons.
To the United Kingdom	30,906	To America	400
Germany	740	Marseilles	94
Trieste	3,753		
		Total	35,903

Besides the above, 4,000 tons were destroyed in the spring of 1862 by a very severe frost. The crop was shipped unusually early last autumn, on account, partly, of the fine quality and moderate price.

The crop this year promises still better. The vineyards have not been as carefully cultivated as usual, capitalists being unwilling, in the unsettled state of the country, to lend out money for purposes of cultivation ; but, notwithstanding this drawback, Mr. Wood considers that a crop of 45,000 tons may reasonably be looked for.

The National Assembly have recently come to a decision affecting the currant trade, which furnishes a characteristic insight into the relations which have hitherto subsisted between the governing and the governed in this country. With a view to encourage the cultivation of currants in the extensive plain of Pyrgos the Government in former days offered the land for sale free of the dîme, which was replaced by a yearly tax of 3 per cent. The lands thus sold now produce a very large amount of fruit, but the payment of the tax has been so successfully evaded that the arrears of taxes in that district are said to reach 70,000,000 drachmas.

In order to put an end to this system of fraud the Assembly has now decreed that the growers in the district of Pyrgos shall be subjected to the duty paid in other districts.

The duty has been thus reduced :—

	Drachmas.
Last year the dîme tax was	15
Export duty	3
Total per mille (1,000 Venetian lbs.)	18

Now the duty on all Greek-grown currants amounts to :—

	Drs.	c.
Dîme tax	7	50
Export duty	3	0
Total	10	50

The duty raised on currants this year is expected to amount to 1,000,000 drachmas.

Cotton.—It was but natural that the late events in America should direct public attention in this country, as elsewhere, to the cultivation of the cotton plant.

In 1858 the entire cotton crop throughout the country amounted to 738,680 okes, or about 2,000,000 lbs. I understand from Mr. Vice-Consul Merlin that since then, in Livadia (Northern Greece), the chief cotton-growing district, "every nook and corner has been sown ; and it is hoped that this year's crop in that province will produce 5,000,000 lbs. of cotton instead of 1,500,000 lbs.

The Government have made laudable efforts to encourage the cultivation of this valuable plant, and have sent 8,000 okes of cotton-seed to Patras to be distributed gratuitously. Mr. Consul Ongley, however, states that the plantations of American cotton-seed this year have not done well ; he attributes their failure to the late ripening of the fruit and to the climate, which is not sufficiently warm for that description of cotton : 49,788 lbs. of cotton have been shipped this year from Patras.

Since the above was written I have been informed that in several parts of Greece, and especially in Livadia, the cultivation of the cotton-plant has been seriously hampered by the want of hands and the high rate of labour. Should this state of this continue it is feared that many cotton-planters in Livadia will be prevented from bestowing on their plantations the unceasing care they require up to the time of gathering, which takes place in August. The Minister of the Interior has in consequence addressed a circular to all the Prefects, requesting them to make known to the labouring classes in their respective jurisdiction, this great demand for labour in Livadia, which will insure to any labourers going there work up to the 15th of September, with wages at 3 drachmas a day, exclusive of food.

Tobacco is much grown in Greece, the best qualities being produced in the plains of Livadia, Calamata, and Argos. It is cultivated also on high lands, as it requires no water, and receives sufficient moisture from the night dews. The annual produce in 1842 was calculated at 450,000 okes. This has more than doubled since, the production in 1858 having reached 1,069,835 okes, valued at 894,444 drachmas.

Valonea, or the cups of the acorn of the Levantine or Valonea oak (*Quercus Ægilops*) is one of the chief and most valuable productions of Greece. The crop in 1858 amounted to 93,000 cwts. against 60,000 cwts. in 1838.

The production of *Silk* sank to a low ebb after the war of independence, many of the mulberry trees having been destroyed during the struggle; but it has by degrees resumed its former position, as is proved by the quantity produced in 1858, which amonnted to 62,622 okes against 66,000 okes produced in 1816 under the Turkish rule. The quality of Greek silk is, however, very inferior; it is chiefly exported to France, where it is used in the manufacture of ribands.

(Signed) HORACE RUMBOLD.

Baden.

Report by Mr. Baillie, Her Majesty's Secretary of Legation, on the Wine Trade of Baden.

Carlsruhe, July 1864.

I PURPOSE to consider in the following Report the state of the Baden wine trade, and in the course of the inquiry to make a few observations on the probable influence which a reduction of the import duties on French wines is likely to exercise on its future development.

The superficial area devoted to the cultivation of the vine in Baden has considerably diminished during the last forty years. In the period 1820-30 the area comprised 75,000 morgen or Baden acres, of which 15,000 were situated in the plains.

This number has been gradually reduced up to the present time, though in the last ten years the decline has been much less rapid. The vine is now scarcely to be seen in the plains, it has given place to other kinds of produce which have been found to yield a better return.

The number of morgen of vineyard area is stated in the latest official statistics at 51,090 acres.

From the following Tables may be seen the progress which has been made in this branch of agricultural industry since the year 1837, and in the two decennial periods 1837-46 and 1852-61 :—

	Production.	Total Value.	Average Prices per Ohm.
	Ohm.	Florins.	Fl. kr.
1837 ..	356,994	2,522,322	7 8
1838 ..	248,087	2,799,339	11 5
1839 ..	324,747	3,515,762	10 50
1840 ..	523,463	4,442,648	7 50
1841 ..	102,068	1,452,071	14 13
1842 ..	299,600	4,681,408	15 37
1843 ..	289,594	3,290,488	11 22
1844 ..	303,882	4,599,819	15 8
1845 ..	179,284	3,137,806	17 31
1846 ..	525,467	9,807,010	19 13
Average of 10 years.	315,320	4,027,860	12 46

Years.	Production.	Total Value.	Average Prices per Ohm.
	Ohm.	Florins.	Fl. kr.
1852 ..	302,159	3,021,590	10 36
1853 ..	291,130	3,493,560	12 36
1854 ..	92,836	2,320,900	25 30
1855 ..	211,647	4,435,342	20 54
1856 ..	258,557	5,532,834	21 18
1857 ..	514,857	10,932,131	21 12
1858 ..	825,124	11,220,508	13 36
1859 ..	461,871	8,653,943	18 42
1860 ..	394,608	5,256,228	13 18
1861 ..	270,121	6.974,562	25 48
Average of 10 years .	362,301	7,570,935	18 24

These Tables show that while the increase of production has more than kept pace with the diminution of area under cultivation, the value of that production and the average prices have risen very considerably in the period 1852-61 as compared with 1837-46.

This remarkable progress is a striking proof of the success which has attended the efforts of Baden wine-growers to improve the quality of their wines, while at the same time it shows that better methods of cultivation have had the effect of augmenting the actual yield of the vines.

There is scarcely a district where the finest description of grapes have not been introduced, and where some of the choicest sorts of wines are not produced. Even the shores of the Lake of Constance, which at one time were proverbial for yielding the most ordinary and unpalateable wines, now produce some which rank with any in Baden.

The manufacture of sparkling wines is rapidly increasing in Baden and throughout Southern Germany. Upwards of 2,000,000 bottles are said to be annually produced, above the half of which are exported abroad. The finest sorts of grapes are required for this manufacture, and the demand for them thereby augmented.

Exportation.—There is no means of determining the real quantity of Baden wines exported to foreign countries.

The latest official statistical Tables published at the end of last year state the amount of the wine, must, and cider exported over the Baden frontier in the years 1859, 1860, and 1861 as follows:—

Towards.	1859.		1860.		1861.	
	In Casks.	In Bottles.	In Casks.	In Bottles.	In Casks.	In Bottles.
	Centners.	Centners.	Centners.	Centners.	Centners.	Centners.
Austria	60	..	20	..	..	
Switzerland	96,928	158	95,313	421	103,017	796
France	12,780	300	6,899	195	2,805	408
Netherlands	12,412	1,443	22,469	3,275	4,550	673

It appears from this Table that Switzerland imports a considerable proportion of the wines passing from Baden.

The principal Baden wines engaged in the trade with Switzerland are Margräfler and Kaiserstühler wines. The finer kinds are preserved in a pure state; but the inferior sorts are used, especially in Basle, for mixing with the cheaper wines of Alsace: in the other Cantons the mixing is less common.

The Kaiserstühler wines are much in demand for converting into sparkling wine, and they are even, I am told, imported into France for manufacture into champagne.

The following is a Table showing the export of the above wines into Switzerland in the years 1841-60. Previous to 1851 the two wines were classed together: since that year, as will be observed, the Returns have been given separately.

The Baden ohm, the measure employed in the Tables, is equivalent to about 40 gallons, in weight 3½ German centners.

It will be observed that the average of the exports is considerably higher in the latter as compared with the former ten years.

Years.	Margräfler Ohm.	Kaiserstühler Ohm.	Total Ohm.	Years.	Margräfler Ohm.	Kaiserstühler Ohm.	Total Ohm.
1841	..	..	14,944	1853	24,858	15,520	40,378

1852	14,600	3,834	18,434	Average .	..	..	17,380

The trade in Baden wines to North Germany is acknowledged to have much improved of late years. This may be accounted for by the gradual amelioration in the quality of Baden wines, and also by the increased facilities of railway communication.

The trade has, however, to struggle against various obstacles, and is still very fluctuating.

A Baden wine merchant attributes this to the fact that the majority of the wines for which there is a demand in the North, both white and red, are not well suited for bottling or for long journeys. For old wines and the choicest sorts there is next to no demand. The newer wines are apt to leave a deposit in the bottles, which frequently awakens prejudice against them. The greater number of his orders, he adds, are for wines averaging in price 33 florins the ohm.

As regards the quantity of wine engaged in this trade only an approximate estimate can be given.

South Germany exports about 107,782 ohm, or 4,311,280 gallons, annually into the Northern Wine Steuerverein. Calculating that Baden produces upwards of 25 per cent. of the total quantity of wine grown in the South German Zollverein States, a rough estimate of the probable share of the exports which falls to Baden may thus be formed.

A serious obstacle to the development of the trade with North Germany is the tax levied on South German wines in Prussia and the other States (viz., Luxemburg, Hanover, Saxony, Electoral Hesse, Brunswick, Oldenburg, and Thuringia), forming the Northern Wine Tax Union or Steuerverein.

It was originally intended as a compensation for the tax on the production of wine in Prussia; but it amounts in reality to more than double that tax, as may be seen by the following comparison of the two taxes.

The tax on production is levied in six different classes, the highest class being 4 florins 22 kreutzers to the Baden ohm.

The average of the six classes is:—On wine, 2 florins 15 kreutzers per Baden ohm; on wine must, 3 florins 58 kreutzers per Baden ohm.

The tax on Southern wines ("Uebergangs Steuer") is:—On wine, 4 florins 57 kreutzers per Baden ohm; on wine must, 3 florins 58 kreutzers; more than double the average of the six classes of the tax on production, and even considerably more than the highest class.

The tax on South German wines yielded in 1859, 267,244 thalers; in 1861, 277,155 thalers 10 silber-groschen.

It is, however, not merely the amount of the tax, but the formalities also attendant on its collection which impede the trade. The intervention of a dispatcher is also required, or the receiver must attend himself to these formalities. A private individual, rather than subject himself to such inconvenience, either contents himself with Prussian wine, or employs a Prussian wine-merchant, who is sure to furnish him with dear wine, and very possibly with an adulterated article into the bargain.

The universal outcry in Baden against this tax does not, therefore, seem unreasonable.

Prussia has, indeed, offered to reduce the tax very considerably when the Franco-Prussian Treaty comes into force; but even then, notwithstanding the boon conferred, the machinery of collection would remain unaltered. I cannot but think that a tax which runs so counter to the general principles of the Zollverein must at no very distant period be abolished altogether.

It is, however, worthy of remark that notwithstanding this and other minor obstacles of the South German wine trade, the importation of South German wines into the Northern Wine Steuerverein is greater than that of foreign wines into the Zollverein, as will be seen by the following Table.

The importation of foreign wines and must of all kinds into the Zollverein was, in the under-mentioned years :—

	Centners.		Gallons.		Centners.		Gallons.
1856 ..	272,676	=	3,000,000	1859 ..	281,075	=	3,212,240
1857 ..	276,591	=	3,161,040	1860 ..	240,795	=	2,751,920
1858 ..	261,867	=	2,922,720	1861 ..	210,498	=	2,439,760

The annual import of South German Zollverein wines into the Wine Steuerverein, which contains a population of 24,000,000, being, as before stated, about 107,700 Baden ohm, or 4,311,200 gallons.

As the taste in North Germany is strongly in favour of French Bordeaux wines, I can only account for this by supposing that the South German wines are very extensively used, as is the case in Switzerland, for mixing with foreign wines.

Another curious fact is the increased disproportion between the consumption of wine in the South and in the North of Germany.

M. Mohl, in his Report of the Franco-Prussian Commercial Treaty, estimates the consnmption of home, Zollverein, and foreign wines at Wurtemberg at about 165,000 Wurtemberg eimers, or 13,200,000 gallons annually, and in the other South German Zollverein States at a similar rate in proportion to the population. He also calculates that the consumption of wine in the Northern Steuerverein of 24,000,000 population cannot amount to more than 180,000 to 190,000 eimers, or 14,400,000 to 15,200,000 gallons annually. If this be so, it is not much larger than that of Wurtemberg alone.

The last point on which I have to remark in connection with this subject relates to the probable effect of a reduced scale of import duties upon the Baden wine trade.

The Baden Government as being the most interested in the matter from the proximity to France, was appointed to fix the scale of wine duties for the Treaty with that country, and accordingly an inquiry was instituted with a view to determine the very point on which I am now engaged.

The result of the inquiry was, that Baden might safely admit the importation of French wines on the same terms as they are allowed in England by the Franco-English Commercial Treaty.

According to this, as 1 gallon is equal to $2\frac{1}{2}$ Baden maas, the duty of 1*s.* on the gallon would be equivalent to 24 florins to the Baden ohm of 100 maas ; the present Zollverein duty on the ohm being 29 florins 16 kreutzers.

It was the opinion of competent persons, at that time, that a still further reduction might be allowed if other corresponding advantages could be obtained from France; and I have lately been informed that the Baden wine trade, and indeed the whole of the South German wine trade, has incomparably more to fear from the competition of Austria than from that of French wines, and as far as Baden is concerned, that the Swiss would even be more dangerous rivals than the French.

I am further informed that the wine duties as they at present stand in the Tariff of the Franco-Prussian Treaty were fixed with especial reference to Austrian and Swiss wines, and if it had only been a question of protection against French wines alone, they would have been willing to reduce the Zollverein wine duties considerably more.

As the Baden Government cannot be supposed to be indifferent to the prosperity of a branch of industry which forms so large a resource of the agricultural population in Baden as the wine culture does, and on which so much capital and labour has been successfully expended, I think the above statement may be safely depended upon against the opinion of the Protectionist Party, who predict the most disastrous consequences to the German wine trade from the operation of the Franco-Prussian Treaty.

I need, however, scarcely observe that the opposition which has been raised to the above Treaty is almost entirely political.

A striking instance of this appears in a passage in M. Mohl's chapter on wines in his Report on the Franco-Prussian Commercial Treaty. He says :—

"The Treaty is so much the less needed as a Customs Union with Austria would supply Germany with Hungarian, Tyrolese, and Austrian wines.

"Even if these wines came into competition with Zollverein wine, free trade with Austria would confer advantages of quite another kind upon Germany, very different from those which could be obtained from France, which, for all the reasons before-mentioned, would in reality only operate to our injury.

"The competition, moreover, of Austrian wines, owing to the distance, would not be so dangerous to the principal wine districts of Germany, viz., the region of the Rhine and its tributaries, as French competition, which in the west lies at our door, and in the north has the advantage of the sea."

It is evident that the protection afforded by distance, even as regards the wine districts he mentions, is already reduced to a minimum by the increased facilities of railway communication, and M. Mohl must be well aware that the danger to the greater part of the Zollverein wine industry, from a freer admission of Austrian wines, is far greater than he would lead it to be supposed from the above passage; but closer political union with Austria would make amends for all, even for the sacrifice of the German wine industry, a result which in all probability would follow, if the dream of the Protectionist Party, namely, Customs Union with Austria, free trade within the Union, and high protective duties towards foreign countries could ever be realised, and German wines exposed to the competition of Austrian wines without the protection of any duties at all.

I believe that few impartial persons in Baden apprehend any detriment to the wine trade from the operation of the Franco-Prussian Treaty, whereas many believe that it will be greatly benefited by it, if the tax upon Southern wines is removed in North Germany.

Baden wines are very useful for mixing with foreign wines, and to this fact is due, to a great extent, the improved exportation of pure Baden wine both to North Germany and to Switzerland. On the other hand, the admixture of French wines is said to improve the quality of Baden wines. They keep better than in their pure state, and are thereby rendered more fit for exportation to distant markets such as America and England. On this ground the import of pure French wine, such as took place before Baden joined the Zollverein, and which will infallibly be revived whenever the Treaty comes into operation, will no doubt be very advantageous to the export trade.

Baden wines are light, dry, and wholesome, and possess qualities which in themselves are a certain protection against foreign rivals, and are always likely to secure their popularity with a large class of persons. A comparison of the exportation into Switzerland of German and French wines, of which a large portion of the former are Baden wines, seems to afford a proof of this, especially as the Swiss duties on German and French wines are precisely the same.

Into Basle alone were imported:—

	1859.	1860.
	Centners.	Centners.
French wines	245,267	167,564
German wines	80,792	77,728

On the other hand, it is considered that the Baden wine industry would suffer if the import duties were fixed so low as to admit a large increase of the cheap, highly alcoholized French wines. The fear is that the national taste, which is now well satisfied with the light Baden wines, might gradually be modified in favour of the stronger but less wholesome wines of France, grounded upon the fact that even under the present scale of duties a considerable import of that class of French wines, especially from the Roussillon district, takes place to satisfy the wants of that portion of the population who value wine chiefly in proportion to its strength.

One effect of the Franco-Prussian Commercial Treaty will certainly increase the importation of Bordeaux wines into the Northern States of the Zollverein; but it is generally acknowledged, even by the most timorous wine merchants, that the removal of the tax on South German wines will amply compensate for any increased competition they may have to contend with in the North.

The manufacturers of imitated champagne predict the most disastrous consequences to their interests from the admission of real champagne on more liberal terms—especially as, under the new Tariff, the duties on wine in bottles are not as

hitherto proportionably higher than on wine in casks; but it is to be observed that a reduction of 50 per cent. will only make a difference of 15 kreutzers on the half maas; which, compared with the price of 3 florins 30 kreutzers, will scarcely be sufficient to increase the consumption of genuine champagne to such an extent as to greatly lower the prices of the German imitated article, which is 60 per cent cheaper. A certain diminution of profits may, however, perhaps take place.

On the whole, I cannot but think that the French-Prussian Treaty will greatly benefit Germany, by stimulating trade and commerce, by giving rise to the introduction of more capital, and, by developing the resources of the country, increase eventually the national wealth; and therefore every branch of industry which is not condemned by its own intrinsic weakness may be expected to reap part of the general advantage, and the wine industry among the rest.

(Signed) EVAN P. M. BAILLIE.

Prussia.

Report by Mr. Lowther, Her Majesty's Secretary of Embassy.

Mr. Lowther to Earl Russell.

My Lord, *Berlin, July* 28, 1864.

IN conformity with existing regulations I have the honour to transmit herewith to your Lordship my Half-yearly Report on the Trade and Commerce of Prussia, as contained in the annexed thirty-one inclosures, in which will be found an account of the receipts of the Zollverein from export and import dues during three quarters of 1863; a Table showing the amount of the total receipts of the Zollverein, 1863; and a Table showing the increase and decrease of the import and export dues of the Zollverein in 1863 as compared with those of 1862; receipts of the Zollverein from dues on beet-root sugar from September 1 to December 31, 1863; amount of transit dues levied in the Zollverein from wine must and tobacco in 1863; amount of dues from beer in the Zollverein during the same period; receipt of the Zollverein for the first quarter of 1864, with a Table comparing them with those of 1863; an account of trade from December 1863 to June 1864 at the following Prussian towns—Siegen, Memel, Bromberg, Tilsit, Bielefeld, Stralsund, Stettin, Görlitz, Elberfeld, Düsseldorf, Dortmund, Crefeld, Aix-la-Chapelle, Königsberg, Dantzig, Thorn, Glogau, Halle, Magdeburg.

Owing to the continuance of the war in America, the unsettled state of Poland, the war between Germany and Denmark, and the late period at which the navigation opened in the North of Germany, this has been so far a bad commercial year.

I have included in my Report some statistics relative to the number of vessels which arrived at and sailed from the Prussian ports in 1863; the traffic on the River Oder from 1839 to 1863; the traffic on the Ruhr from 1814 to 1863; the dues levied on sugar and beet-root sugar in the Zollverein from April 1, 1863, to March 31, 1864; as well as some statistics of the town of Berlin.

I have, &c.

(Signed) W. LOWTHER.

Receipts of the Zollverein in three Quarters of 1863.

The receipts from import and export dues in the Zollverein amounted in the first three quarters of 1863 to 18,458,893 thalers; during the same period of 1862, they amounted to 18,880,294 thalers, showing a decrease in 1863 of 421,401 thalers.

The not inconsiderable decrease in 1863 appears more remarkable as, from the

tively state of trade, it was expected there would have been a more favourable result in the last quarter. The circumstances unfavourable to trade were the war in America, the disturbances in Poland, and the unfavourable state of the water in the navigable rivers of Germany. In the summer months, more particularly from the middle of July, the water was so low that vessels could only carry a fourth-part of their usual cargo. The decrease in receipts of importance was in cotton yarn of all sorts, cotton goods, raw sugar for home refineries, and cattle, more particularly lean swine; there was also a decrease in a smaller degree in woollen goods of all sorts, unwrought tobacco-leaves, treacle, timber for building and other timber, and several other articles.

The export of sulphate of zinc has not diminished, though it has to enter into great competition with that article exported from Spain.

Receipt of Export and Import Dues in the first Nine Months of 1863, as compared to those for same period in 1862.

Receipts of the Zollverein in 1862 *and* 1863.

According to the provisional calculation, the receipts of the Zollverein were for 1862—

	Thalers.
From Import Dues	25,703,236
From Export and Transit Dues	143,191
Total	25,846,427

The total receipts for 1863 were—

	Thalers.
From Import Dues	25,574,880
From Export Duties	166,284
Total	25,741,164

showing a decrease in 1863 in import dues to the amount of 128,356 thalers, an increase in export dues to the amount of 23,093 thalers, and a total decrease in toll dues to the amount of 105,263 thalers.

Receipts of the Zollverein from Import and Export Dues in 1863 *as compared to* 1862.

The revenue of the Zollverein from import and export dues shows a deficit or falling-off, in comparison to that of last year (1862), and after the surplus has been deducted, of 105,108 thalers; and this deficit in import duties amounted to 128,356; the increase of export dues amounted to 23,248; total of deficit, 105,108. Thus the result of the receipts as compared to the previous year did not amount to $\frac{1}{2}$ per cent.

The total receipts from import dues, in 1862, was 25,703,236 thalers; in 1863 it was 25,574,880 thalers; showing a diminution, in 1863, of 128,356 thalers.

With regard to this unfavourable result, as compared to that of the former year, it is to be remarked that, although trade appeared to promise some activity early in the year, these expectations were not realized. Trade suffered generally very much from the state of politics, more particularly from the war in America, and the continued disturbed state of Poland. Speculation was stopped and trade was limited to merely supplying the requirements of the neighbouring States. Added to this came the increasing political anxiety towards the end of the year, as well as the crisis relative to the Zollverein itself. On the other hand, the receipts from the import dues at the end of the third quarter showed a rise of more than 2 per cent.; and as this rise fell in the fourth quarter to $\frac{1}{2}$ per cent., there seems to have been good grounds for expecting a more favourable commercial year.

With regard to the share of the single States in the result of receipt of dues, it would appear from the comparative Tables that there was, in 1862, a diminution in Wurtemberg to the amount of 10 per cent.; in the Grand Duchy of Hesse, of 6 per cent.; in Oldenburg, of 3 per cent.; in Hanover, of 2 per cent.; in Prussia, Bavaria, Electoral Hesse, and Frankfort-on-the-Maine it was less considerable.

With regard to the increase in receipt of dues, this took place chiefly in Luxemburg, but not to the extent that it did in 1859. In Baden and Nassau the receipts exceeded those of the previous year by 7 per cent.; in Thuringia the receipts increased 2 per cent.; in Saxony and Brunswick there was but a very slight difference.

On looking at the list of goods on which dues have been paid, it is seen that a diminution of dues took place in bleached and unbleached cotton yarn, and on cotton goods. There was also a diminution of dues upon raw sugar for refineries. An attempt had been made in the previous year to introduce raw sugar for refineries, in opposition to the beet-roots for that purpose, but the competition failed. In 1862 the dues paid upon raw sugar amounted to three times as much as those paid in 1861, owing to the bad harvest of beet-roots, as well as to the reduction on the duty upon Indian sugar and the low prices of the raw article. In the third quarter of 1863 the amount of the dues received was less than 10 per cent.; and in the fourth quarter of the year the amount was even smaller.

There was also a falling-off of dues paid upon coffee, cattle, cotton of all sorts, unwrought tobacco leaves, and various other articles of less importance.

There was an increase of receipt of dues from wine in casks, rails for railways, fresh and dried southern fruits, herrings, meat, spices, and other articles of less importance. The wholesale wine merchants were not inclined to give large orders in consequence of the unfavourable vintage in France which produced high prices, and also in consequence of the expectation that the Franco-Zollverein Treaty would have come sooner into operation. Herrings were imported in large quantities, owing to the large quantities taken and the low prices. Southern fruits and spices, owing to the good harvest, were low in prices, and large quantities were imported. There is an increase in the importation of meat owing to the increased use of bacon and suet from America, which is proportionably cheaper than in this country.

The receipts of Prussia were less than in 1862, about ½ per cent. As regards the single provinces there was an increase in Silesia, and a decrease in East Prussia, Posen, and Saxony. The falling-off in the receipts in Silesia was caused by the diminution of dues paid upon cattle (more particularly on lean swine) and upon cotton yarn; in East Prussia it was caused by that of raw sugar for refineries, the increased importation in the previous year having caused a considerable increase in the dues paid; in Posen, from cattle of all sorts; in Saxony, from cotton yarn, raw coffee, unwrought tobacco leaves, and raw sugar for refineries; in the Rhenish provinces, from cotton yarn, raw iron, iron goods, and unwrought tobacco leaves; and in Brandenburg, from cotton yarn and raw sugar for refineries.

With regard to the increase of receipts which took place, there were above 10 per cent. in Pomerania; in West Prussia they were less, and in Westphalia they were the same as the previous year. The increase in the province of Pomerania was caused by the increased importation of raw iron, iron goods, wine, and herrings; in Westphalia, by raw iron, coarse wrought iron goods, and wine.

II.—*Export Duties.*

The increase, as compared to that of last year, was 23,218 thalers. The increase of receipts from export dues in the States of the Western Union is chiefly owing to the increased exportation, by Frankfort-on-the-Maine, of raw hides, sent chiefly to France and Belgium. The decrease in export dues which took place in the Eastern Union was caused chiefly by the disturbances which continued in Poland.

Receipts of the Zollverein in the first Quarter of 1864.

The receipts from import and export dues in the first quarter amounted to 4,896,263 thalers; during the same period, in 1863, they amounted to 5,170,395 thalers; so that there was a falling off to the amount of 274,132 thalers.

It is to be remarked that, in the first quarter of 1863, the navigation was not interrupted, whilst, in 1864, it was entirely closed during January and February; and only opened again late in March.

Trade, in 1863, suffered from the war in America and the disturbed state of Poland; in 1864 the war with Denmark was added to these complications.

There was an important falling-off in the receipts from dues on raw sugar for refineries and raw iron; and, to a smaller extent, in one- and two-threaded cotton yarn, wine in casks, and bottles, meat, herrings, and various other articles. With regard to sugar, the prime cost of the raw sugar is not in a just proportion to that of refined sugar; and with regard to raw iron, the uncertain state of politics had a depressing effect upon the inland foundries and the high prices paid in England for raw iron had a great influence upon the decreased import of this article. The increase of dues took place chiefly upon raw coffee, for, in consequence of the large demand for this article, the old stocks were cleared out and new ones had to be supplied for them.

COMPARISON of the Receipts of the Zollverein during First Quarter of 1863 and 1864, from Import and Export Dues.

Account of Trade from December 1863 *to June* 1864 *at various Towns.*

Siegen.—The iron trade, on the whole, may be considered as satisfactory in 1863, and though the prices were occasionally low there was a continual demand and constant occupation. By the introduction of the Bessemer system into Germany, cast steel can be produced at a small expense, chiefly in fuel, and the new foundries at Essen, Bochum, Hörde, and Schleiden are being constructed and worked on this system. The proof of the general action which was given to the iron trade of Siegen is to be found in the fact of the works being continually employed, and that the produce found a ready sale. The siderites not wanted at Siegen were sent to Hoehdahl, Kupferdreh, Stelle, Hattingen, Duisburg, Oberhausen, Reuss, and Siegburg, where large quantities are taken. Not very much business was done in raw iron, and though there were, during some months, large sales of raw iron in England, the prices in Rhenish Westphalia remained low. The foundries of the Mark sell raw iron generally at from 12½ to 13 dollars the tonne, while in England and Scotland it is paid 67*s.*, and a higher price expected. The rolling works of Siegen found full employment; the produce was from 1 to 2 thalers lower than the previous year, but this loss was covered by the reduction in the price of coal and raw iron. Wrought-iron works and machinery were fully occupied.

The future development of the iron trade of Siegen and of Rhenish Westphalia depends very much upon political contingencies. A general war would produce a most disastrous effect in reducing the amount of produce, and in diminishing the prices; but should there be no great political changes the iron and steel trade promise to become very important, but it will be first necessary to have a closer connexion by railway: there is also general want of water, and of a connection by water.

There was but little business done in leather, and the manufactured produce does not stand in any just proportion with the raw material.

During the months of January and February there was a great improvement in the mining operations. The state of trade in raw iron was less satisfactory, as there was a fall in price to the amount of half a thaler per 1,000 pounds. The demand for sheet iron was so great it could not be satisfied. There was an increase in the price of raw hides, but the manufactured leather goods did not find a ready sale.

Wheat was sold per 100 lbs. at 3 thalers 5 silver-groschen; rye at 2 thalers 15 silver-groschen; barley 2 thalers 10 silver-groschen; oats at 2 thalers 5 silver-groschen; potatoes at 25 silver-groschen.

There was an improvement in the sale of ores, as well as in the prices, but a fall in the prices of raw iron, 13 to 13½ thalers per 1,000 lbs. There was also a good sale of copper and lead in March, at good prices.

Memel.—From the position of Memel very little business can be done in the winter months, and though during the month of December last the communication with the sea was open there were so few vessels that freights were too high to allow

heavy goods, such as wood, to be exported. The weather, too, was most unfavourable, and vessels were known to have spent four weeks in reaching Elsinore, and many were obliged to take refuge in Sweden and Denmark. The alarm, too, of a maritime war made the vessels either remain at Memel, or undertake longer voyages, such as to America.

The chief business done was in flax; the supply was unusually large, and the prices paid were not high. There was a supply of 21,000 centners Szameiter (4 brand), which was paid on an average 13 thalers. The flax was very much bought by Scotch peeple who left it at Memel until the freights were lower, and there was less risk in its transport. The flax trade was better than it had been for some years, and the spinners in 1862 and 1863 realized from 40 to 50 per cent. They have also large orders for further supplies. Owing to the want of cotton there is a very large demand for linen goods, and it is calculated that it will not fall off even should the war in America cease. There were two shipments of flax to England of 2,387 centners, and one of 374 centners to Stettin.

The supply of grain was small, 20 lasts of wheat at from 55 to 60 silver-groschen; 55 lasts of rye at from 35 to 39 silver-groschen; 42 lasts of barley at from 27 to 33 silver-groschen; 65 lasts of oats at from 18 to 21 silver-groschen. There was no export of grain during the month of December, and the prices remained the same.

Little business was done in the wood trade in the month of December; 13 vessels were employed in the export of sold wood, of which 9 were destined for England, and 4 for Belgium. The wood shipped consisted of 5,153 deal balks, 6,983 sleepers, 4,290 planks, 1,416 boards, 325 pieces of round timber, 1,210 oak staves. The traffic of the harbour consisted in the arrival of 11 vessels, and the departure for the sea of 23.

With regard to the general trade of Memel in 1863 it may be looked upon, notwithstanding the difficulties with which it had to contend, as a good year. No very great improvement in its trade can be expected as long as it is cut off from railway communication. The total export of Memel in 1862, as compared to 1863, shows a decrease to the amount of 5,000 lasts (104,931 lasts against 110,021 lasts), and this was chiefly in wood, but there was an increase in the export of grain to the amount of about 2,000 lasts; of rags of about 600 lasts; of linseed of about 600 lasts; of various other goods to about 1,300 lasts. There was a diminution of export of flax of about 600 lasts as compared with 1862. The most considerable falling off was in the export of oil cake, as there was but small demand for England. There was an increase in the import of salt to the amount of 2,000 lasts, and a decrease in the import of coal to the amount of 5,000 lasts. The total amount of vessels which were at Memel was, in 1862, 940, of 120,478 lasts; in 1863, 963, of 112,814 lasts; the number of vessels discharged was in 1862, 886 of 110,722 lasts; in 1863, 930 of 106,539 lasts.

Political events during the month of January weighed so heavily upon all the ports of the Baltic during January that there was little business done. The stores, with the exception of flax, were low, and the stock of wood was smaller than usual. The amount of flax in store was great and increasing daily; early in the month there was no sale for it, owing to the very high prices of freights, &c., and later, from fear of meeting with Danish vessels; so that the stock of flax amounted to 26,670 centners. The price maintained itself at 13 thalers per centner (4 brand), but there was no demand for it in England, as it appears that England now takes flax during the winter from Riga. It is an article which is apt to get damaged in the winter on its road up to Memel, and to be unfit for sale

The total amount of grain sent to Memel in January and February was 30 lasts of wheat, 80 of rye, 65 of barley, 110 of oats, 23 of peas; there was no export of grain.

The prospects for the wood trade were worse than usual. Trusting to a demand from England the prices had been kept up, but no purchases were made, and the unusually high freights rendered business still more difficult.

In January 9 vessels left Memel with wooden goods, of which 8 went to England, and 1 to Belgium. The total amount of the shipments was 2,972 deal balks, 252 ufers, 3,287 sleepers, 2,168 half sleepers, 5,414 planks, 60 oak axle trees, 1,702 oak staves; only 3 ships came into Memel in the month, and 12 left it.

The connection by steamer between Memel and Königsberg began about the end of March, but there was not the same amount of traffic that there generally is at that period, and the prices demanded for freights were very high. There are great complaints at Memel of the difficulties experienced by people sending goods to Russia, the endless formalities which have to be gone through causing a great

loss of time as well as of money. Towards the end of March there was more activity in the trade, an increased demand for goods, and higher prices were paid. the supply of wheat amounted to 25 lasts, of rye to 130 lasts, of barley to 38 lasts, of oats to 100 lasts. The supply of rye from Poland is not so large as it was. There were exported 62 lasts of rye to Sweden. Four vessels were occupied in taking flax, of which 14,065 centners went to England. During March, 2,605 centners of rags were sent to England, and further supplies were expected later in the month. Owing to the want of vessels and the very high freights paid, there was no export of wood. Only 25 vessels came to Memel, and 5 left it. Of the 25 which arrived 16 brought ballast, 1 salt (2,540 centners), 6 coals (24,396 centners), and 2 piece-goods. The supply of coal to the Russian railway at Kowno was very small, owing to the Russians cutting down the trees in the neighbourhood of the railway and using the wood for fuel for the engines. Memel derived great advantage from the blockade, in April, of Dantzic and Pillau, inasmuch as there was a large influx of neutral vessels, about 150. The wood trade did not derive as much benefit from this as other trades, as wood has to be carried in vessels adapted to the purpose. The wood exported was 1,919 deal balks, 1,672 sleepers, 840 planks, 65,216 boards, 89 oak balks, 213 shock clapboards, 2,868 oaken staves. The supply of Szameiter flax amounted in April to 4,500 centners, sold at 12½ thalers per centner, 4-brand. There was a good demand for Scotland for Memel flax; 35,749 centners of flax were sent in 9 shipments to England. There were shipped 676 lasts of rye in 18 shipments to Norway; 149 lasts of rye in 3 shipments to Sweden; 48 lasts of rye in 1 shipment to Denmark; 217 lasts of rye in 3 shipments to England; 77 lasts of rye in 1 shipment to Holland; 372 lasts of rye in 4 shipments to Holland; 77 lasts of barley in 2 shipments to England; 92 lasts of barley in 1 shipment to Belgium; 259 lasts of oats in 1 shipment to England; 58 lasts of peas to England; 3 lasts of peas to Norway; 134 lasts of peas to Holland; 500 lasts of linseed in 4 shipments to England; 166 lasts of linseed in 2 shipments to Belgium; 57 lasts of linseed in 1 shipment to Holland.

With regard to imports, there came 26,826 centners of salt in 6 shipments. The fifth-part of the vessels, 23 in number, brought coal to the amount of 150,830 centners. The supply of Norwegian herrings was greater by 10,197 tonnen than has ever been known. The Norwegian vessels that bring herrings generally take back rye.

Bromberg.—Towards the beginning of the new year there is generally a falling off in trade, owing to merchants being employed in other ways; but the dulness had never reached such a point as that experienced in last December, and more particularly in the corn trade, and though the supplies were large there was no demand either for home consumption or for export. The foreign reports of the wheat were discouraging, and there was no desire to buy, though the prices were low. Rye and summer grain were entirely neglected, and only little business was done in them at low prices. It has been roughly calculated that about 3,500 wispel of wheat and about 2,000 wispel of rye and other grain remained in store; and in looking back to the past year it must be confessed it was a bad one and an unprofitable one as regards the corn trade. Nearly all articles suffered a considerable and continued depreciation. The prices paid at the end of December 1862 for wheat were 72 thalers, for rye 42 thalers, for peas 38 thalers, for barley 32 thalers, for oats 20 thalers, for oil-seeds from 100 to 104 thalers, per wispel; at the end of December 1863, the prices for wheat were from 48 to 54 thalers, for rye from 28 to 30 thalers, for peas from 30 to 32 thalers, for barley from 28 to 30 thalers, for oats 20 thalers, for oil-seeds from 82 to 84 thalers, per wispel of 25 scheffel. At the beginning of the year 1863, there were hopes of a rise in the price of wheat, in consequence of the expected peace in America; but notwithstanding the continuation of the war, and the diminution of the exports from there, the prices took a falling direction, and there was no demand for the best qualities—those produced at Kujavien; the prices paid were from 20 to 25 thalers per wispel. All other sorts of grain continued in the same proportion. The same thing occurred with regard to oil-seeds, notwithstanding the favourable weather.

In consequence of the good potato harvest of 1862 there was a large supply of spirit, but there was small demand for the article with the exception of the period when troops were collected on the frontier. The produce of the year was about 1,150,000 quarts, of which about 240,000 quarts were exported, and a supply remained of 170,000 quarts at the beginning of the year. The principal markets for this article are Königsberg and Kujavien. There was an expectation that in

consequence of the opening of the line of railway of Bromberg and Warsaw, a trade might have been opened with Poland, but the disturbances there put an end to these expectations. That there is a great increase in the trade of Bromberg may be seen from the fact that in 1854 there were 291,000 centners of goods, and in 1862, 628,000 centners, delivered at the station. This may also be seen in the flourishing state of the manufactories and industrial institutions; the demand for bricks is so great that they can hardly be supplied at 15 thalers per 1,000. The new factories are chiefly lime-kilns, saw-mills, fulling-mills, tan-mills, and brick-kilns.

The state of politics, the alarm of a blockade, the bad state of the weather, the high freights, and the general alarm, had the effect of putting an end to all business during March. About 100,000 quarts of spirits of wine were sent to Berlin.

Tilsit.—Every branch of trade at Tilsit was depressed during the month of January; the daily sinking prices of grain discouraged buyers and sellers, and so, little business was done. There were paid for rye from 30 to 33 silver-groschen; for wheat, from 47 to 58 silver-groschen; and for oats, from 15 to 20 silver-groschen per scheffel, according to quality. The prices, too, at the markets were so low that proprietors would not sell at the present prices, and so, small quantities of grain were sent; moreover, there is considerable difficulty in sending the grain, owing to the state of the roads. The market prices varied from 55 to 60 silver-groschen for wheat; from 30 to 35 silver-groschen for rye; from 15 to 20 silver-groschen for oats; from 25 to 28 silver-groschen for barley; from 35 to 38 silver-groschen for peas; and from 8 to 12 silver-groschen for potatoes per scheffel.

There were no supplies of linseed, owing to the communication being cut off with the Polish frontier. There were in store about 200 lasts of wheat, 140 lasts of rye, 150 lasts of barley, 250 lasts of oats, 25 lasts of peas, and 12 lasts of vetches. There was a small sale of linseed oil to the provinces at 13 thalers per centner. There were bought for England 2,000 centners of linseed cake, at 55 silver-groschen per centner. Refined rape-seed oil kept its price at 13 thalers per centner; the sale was small: and the price of rape-seed cake fell to 50 silver-groschen per centner in consequence of the low price of grain. There were considerable supplies of flax, and 1,000 centners were sold for Memel and Insterburg at from 80 to 87½ silver-groschen per 31 Zoll lbs.

There was a good sale of wood for railways.

The frontier trade with Russia was limited, and was chiefly confined to hard-ware. Russian paper rubles were eagerly bought for Memel, and were paid from 28 silver-groschen 7 pfennings to 28 silver-groschen 10 pfennings.

There is nothing very favourable to report of the trade of Tilsit during the month of March. There was but very little business done in corn, owing to the the prospect of a blockade of the ports of the Baltic; consequently there were no orders from Memel and Königsberg. Prices remained similar to those of February. There were in stock 350 lasts of wheat, 400 of rye, 200 of barley, 550 of oats, 60 of peas, 20 of vetches, 15 of beans, and 280 of linseed. Towards the end of the month, as the prospects of a blockade diminished, there was a demand for certain articles; 50 lasts of barley went to Memel, as well as 120 lasts of linseed, 5,000 centners of linseed cake, and 1,000 centners of flax. The price of the linseed cake bought at Memel for England was 55 silver-groschen, and later 51 silver-groschen per centner. There was no great business in flax; it was paid from 72½ to 75 silver-groschen per 31 Zoll lbs. Spirits of wine fell to 13⅓ thalers per 8,000 per cent. tralles. The wood trade was confined to a few orders for the Tilsit Railway.

In the month of April there were sent from Tilsit to Memel 200 lasts of rye, 200 lasts of barley, 10 lasts of oats, 180 lasts of linseed, 25 lasts of peas, 10 lasts of beans and vetches; there were sent to Königsberg 100 lasts of rye, 15 lasts of peas, 900 centners of thimotheum. The prices rose very little in March, and were:—Wheat, 55 to 61 silver-groschen per scheffel; rye, 32 to 37 silver-groschen per scheffel; barley, 26 to 30 silver groschen per scheffel; oats, 18 to 22 silver-groschen per scheffel; white peas, 35 to 39 silver-groschen per scheffel; grey peas, 32½ to 35 silver-groschen per scheffel.

The supplies by land were more considerable, but still small. The supplies at the end of April amounted to 400 lasts of wheat, 550 of rye, 80 of barley, 700 of oats, 20 of peas, 12 of vetches, 160 of linseed. About 7,000 centners of linseed cake were sent to Memel at 52½ silver-groschen per centner. Flax was paid from 72½ to 76 silver-groschen per 31 Zoll lbs., and 1,600 centners were sent to Memel; 500 to Riga at 8⅔ to 9 thalers per centner. There was but little business in wood.

Bielefeld.—There was a small demand in January and February for linens, damask, and drill. A factory lately established at Borgholzhausen of sail-cloth finds a good outlet for its produce in England. There was a good sale of flax. Politics had a depressing effect upon velvet and silk goods, as there were few buyers, and those at low prices. There was a tolerable sale of raw silk, and the sale of furniture plush was satisfactory.

The trade in grain was limited. The prices at the end of January were—for wheat, 85 Zoll lbs., 71 silver-groschen; for rye, 80 Zoll lbs., 52½ silver-groschen; for barley, 70 Zoll lbs., 50 silver-groschen; for oats, 50 Zoll lbs., 30 silver-groschen; for potatoes, per 100 lbs., 20 silver-groschen.

During March there was but little change in the linen trade. The sale of sail-cloth was impeded by the German-Danish war. The price of flax rose. There was an improvement in the sale of velvets and silks, owing to the alarm of a general war having passed away.

There is a large manufactory of cigars at Bielefeld, which is in a flourishing condition. During April there was no change in the linen trade, which suffers from the Danish war. The large prices till now given in England for sail-cloth appear to have ceased.

Stralsund.—The year 1863, like 1862, was not a productive or profitable year, either to the merchant or the agriculturalist of the Stralsund district. The spirit of enterprise was impeded by a feeling of insecurity and alarms of war, having already to contend with considerable competition, owing to the low prices of corn; thus the favourable results from the abundant harvest were not realized. Early in the year 1863 it was hoped that the low prices of grain would rise; and there was an expectation that the war in America would cease, in which case a considerable quantity of the superfluous grain of the Northern United States would find a market in the South. Stralsund merchants consequently bought large amounts of grain, at from 60 to 80 thalers per wispel, and kept them till the middle of the year. The hope that they might be demanded for England, Belgium, and other countries, was not, however, realized, except in a small degree, as regards Belgium, for a short time. Speculators were consequently considerable losers; and as the prospects of the harvest in England were good, hopes of high prices vanished. The autumn brought with it prospects of a war with Denmark, and dealers had to sell with loss; and at the end of 1863 the price of wheat was 10 to 15 thalers lower per wispel than it had been at the beginning. The same changes took place with regard to other kinds of grain. The fall in rye was even greater. The harvest having been good there were large quantities for export; but as there was no demand, prices continued falling till they were 10 to 12 thalers lower than at the time of harvest.

Though trade and agriculture did not flourish, shipping and ship-building were satisfactory. The number and tonnage of the vessels was on the increase. Every year sees an increase in the number of vessels employed in general trade, and there is an improvement in the way in which they are built and managed. The war with Denmark must of necessity have a prejudicial effect upon the shipping trade.

The following statistics show what was the trade and shipping of Stralsund and Greifswald during 1863:—

I. Stralsund. (A.) Shipping and Import.—On the 1st of January there were laid up for the winter 67 sailing-vessels and 3 steamers. In the course of the year there arrived 502 vessels, of which 383 had cargoes, 79 ballast, and 40 empty. The ships had the following flags:—

	Vessels.	Normal Lasts.		Vessels.	Normal Lasts.
Prussian	385	18,163	English	10	885
Danish	47	1,894	Mecklenburg	5	807
Hanoverian	27	721	Norwegian	3	60
Swedish	13	444	Russian	1	65
Dutch	11	502			

Of the 383 vessels which brought cargoes, 118 coming from Newcastle, Hartlepool, Sunderland, Middlesbro', Grimsby, Tayport, Hull, Charlestown, Grangemouth, Alloa, Ayr, Dysart, Dundee, Burntisland, and Inverkeithing, brought 29 chaldrons of whet-stones, 1,006 keel of coal, 63 tons of coke, 10 tonnen cement, 5,360 centners anchors and chains, 326 centners iron bars, 252 centners coarse iron ware, 3,036 centners raw iron, 503 centners of soda, 20 tons fire-proof clay, 27,000 fire-proof

stones, 56 centners bleaching powder, 82 centners white lead, 102 centners coal tar, 25 centners of steel, 48½ centners drugs, 1,298 centners clay pipes, 12 centners vermillion, 26 centners chalk ("schlemmkrude,") 500 iron rails, 3,050 small iron plates. One vessel from Port Madoc brought 150 tons of slates; 13 vessels from Hamburgh, Lübeck, and Oeland brought 5,690 bags of guano, 512 centners raw hides, 177 centners lignum vitæ, 62 centners mahogany, 32 bails of cork-wood, 12 centners of oil of turpentine, 37 centners of raw coffee, 12 centners of veneer, 11 centners of rice, 2 centners of spices, 141 centners of treacle, 71 centners of chemical produce, 4 centners of steel, 720 centners of wine, rum, and brandy, 4 centners of tin plate, 232 centners of iron ware, 14 centners of photogene, 12 centners of wooden nails for shoes, 11 centners of sand paper, 14 centners of cane for chairs, 93 centners of fine soap, 150 centners of paper, 8 centners of horn-tips, 1,000 scheffel of apples, 1,500 horns of cattle, 18,570 tiles, 19 centners of clay piping; 2 vessels from Bremen brought 3,800 flag-stones; 3 vessels from Leer brought 1,177 centners iron bars, 360 centners iron ware, 450 centners coal; 3 ships from Flensburg brought 184 young cattle; 2 ships from Kiel brought 1,497 scheffel rye, and 677 scheffel wheat; 8 ships from Copenhagen brought 615 centners treacle, 159 centners pitch, 1,242 centners rape-seed cake, 190 centners train-oil, 40 centners salt-fish; 6 vessels from Bergen brought 5,281 tons of herrings, 50 tons of train-oil; 6 vessels from Stockholm, 65 tons of pitch, 115 tons of tar, 30 tons of Indian red, 2,904 centners of iron bars; 3 vessels from Riga brought 14,000 mats, 6,497 poods of hemp; 3 vessels from St. Petersburgh 600 poods of oil, 1,244 poods of pot ashes, 31 tons of linseed, 11 centners of stearine; one vessel from Jacobstadt brought 601 tons of tar; 12 vessels from Antwerp and Harlingen with 591,300 roofing tiles and 43 barrels of carriage grease; 2 vessels from Rotterdam and Dortrecht, with 573 iron rails; 1 vessel from Bordeaux with 641 centners of wine, 13 centners of rum, 10 centners of vinegar, 46 centners of paper, 10 centners of soap, 7 packets of fruits; 16 vessels from Königsberg and Kolberg with 14,670 scheffel of rye and 8,559 scheffel of linseed; 183 vessels from Rügenwalde, Kolberg, Stolpmünde, Westerwieck, Calmer, Monterös, Nordköping, and Carlsham, with 2,628 lasts of planks, boards, laths, and poles, 275 beams, 572 klafter of fire-wood, 2,505 centners of tar and pitch, 65 centners of iron, 108 horses, 294 pigs, 460 centners drinking-glasses.

(*B.*) *Shipping and Export.*—In the course of 1863 there left 334 ships, of which 209 had cargoes, 65 ballast, and 60 empty.

The ships left under the following flags:—

	Vessels.	Normal Lasts.		Vessels.	Normal Lasts.

The above cargoes consisted of 471,728 scheffel of wheat, 23,269 scheffel of rye, 143,995 scheffel of barley, 4,493 scheffel of oats, 14,539 scheffel of malt, 21,307 scheffel of rape seed: 679,331 scheffel of grain, 1,870 centners of rags, 673 centners of seeds, 1,870 centners of old iron, 705 tons of herrings, 290

centners of sea-grass, 1,822 centners of flour, 1,084 centners of treacle, 24,341 scheffel of potatoes, and 5,106 centners of oil cake. There were also sent in several sloops to Copenhagen 373 klafter of fuel wood, and to Sweden 16,000 wall of fresh herrings.

The total amount of grain exported by sea was 9,057 lasts and 56 scheffel; and exported to the interior to Berlin, Stettin, Demmin, Wolgast and Anklam, 90 lasts of barley, 340 lasts of oats, 115 lasts of malt, 798 lasts of rape-seed, making 1,343 lasts, and a grand total of 10,400 lasts 56 scheffel. Treacle 1,000 centners; sugar, 1,009 centners; rags, 4,728 centners; bones, 4,255 centners; lime, 1,180 centners; guano, 830 centners; oil, 1,210 centners; oil-cake, 1,850 centners; wool, 180 centners; tar, 228 tons; building-wood, 15,300 cubic feet.

There were in winter quarters 78 sailing-vessels and 1 steamer.

On the 1st of January, 1863, the shipping consisted of 176 vessels, of which 12 were lost at sea, and 5 sold; 15 new vessels were built, and 2 were bought.

II. Griefswald. (A.) Navigation and Imports.—At the beginning of the year there were in winter quarters 19 ships, of 1,930 lasts. In the course of the year there were built 11, of 1,734 lasts, and there arrived 152 vessels of 9,014 lasts, making a total of 182 vessels of 12,678 lasts.

Of the ships which left there were—

1835	4,713	11	1852	5,407	$22\frac{7}{8}$
1836	2,917	27	1853	3,116	$46\frac{3}{4}$
1837	3,656	24	1854	3,336	$71\frac{3}{4}$
1838	1,871	$66\frac{1}{2}$	1855	4,262	$43\frac{3}{4}$
1839	3,650	$63\frac{1}{2}$	1856	1,835	50
1840	6,129	$55\frac{3}{4}$	1857	4,125	$49\frac{1}{2}$
1841	6,303	1	1858	2,039	$8\frac{3}{4}$
1842	4,761	$25\frac{1}{2}$	1859	3,029	21
1843	3,827	31	1860	3,510	18
1844	6,154	$13\frac{3}{4}$	1861	4,258	$4\frac{1}{4}$
1845	5,902	$47\frac{3}{4}$	1862	1,939	27
1846	4,904	$8\frac{1}{4}$	1863	3,655	64

(Total of 34 years, 149,692 lasts $62\frac{3}{8}$ scheffel, giving an average of 4,402 lasts $54\frac{3}{4}$ scheffel.)

The supplies of grain from Rügen could not be sent during January and February on account of the ice; and the supplies sent by land were only small, and were paid the following prices at the market:—

	Thalers per wispel.		Thalers per wispel.
Wheat	45 to 55	Oats	21 to 23
Rye	28 to 30	Peas	30 to 32
Barley	24 to 27		

Wheat, 45 to 55 thalers per wispel; rye, 28 to 30 thalers per wispel; barley, 24 to 27 thalers per wispel; oats, 21 to 23 thalers per wispel; peas, 30 to 32 thalers per wispel.

Stettin.—During the month of March the trade of Stettin, with but few exceptions, felt the oppression of the warlike aspect of things, and the month of March witnessed the continuation of this depression. The corn trade felt this most, as there was no demand from England, the supplies continued coming, and there was a general panic. All purchases were made under the impression of danger from blockade. The prices paid were at Stettin per 85 lbs. yellow wheat 44 to 50 thalers; 83 to 85 lbs. yellow spring $50\frac{1}{2}$, $\frac{3}{4}$, $\frac{1}{2}$ thalers; May and June 52 thalers; June and July $53\frac{1}{2}$ thalers; July and August $54\frac{1}{2}$, $\frac{3}{4}$, 55 thalers; August $55\frac{1}{2}$ thalers; September and October $56\frac{1}{2}$, 57 thalers. The prices were low for rye, and the supplies small. There is a decrease in the export of rye from Poland to Stettin. The prices paid for rye at the end of the month were per 2,000 lbs. $30\frac{1}{2}$ to $31\frac{1}{4}$ thalers; spring $31\frac{1}{4}$ to 31 thalers; May and June $32\frac{1}{2}$ to $32\frac{1}{4}$ thalers; June and July 34 to $33\frac{3}{4}$ thalers; July and August $34\frac{3}{4}$, $\frac{7}{8}$, 35, $34\frac{3}{4}$ thalers. In barley and oats there was but little business, and the offers exceeded the demands. The prices paid at the end of March per 70 lbs. were 25 to 26 thalers, for barley; for oats per 50 lbs. 21 to $21\frac{1}{2}$ thalers; for spring oats 22 thalers per 47 to 50 lbs. Complaints from the Rhine and France caused a rise in the price of rape-seed oil, but this did not last. There was a fall in the price of spirits. There was a slight demand for sugar. Trade in wood cannot improve as long as the blockade exists. Undertakings with shares during the last

year appear to have been profitable, not only giving a large dividend, but by the increase of their reserve fund. The Prussian National Insurance Company paid 15⅓ per cent., the Stettin Towing Company 8 per cent., the New Steamer Company 7½ per cent., the Stettin Portland Cement Company 15 per cent., and the Stettin rolling-mills 20 per cent. The results of the business done by the Sea Insurance Companies were less satisfactory, and were much behind those of 1862, the Pomerania giving only 5 per cent, the Union 3⅔ per cent.; the former having given 18 per cent., the latter 6½ per cent. in 1862.

Very little business was done in April and May. The stock at the end of April amounted to 30,000 wispel of grain, and there were brought in during the early part of May 5,547 wispel of wheat, 6,390 wispel of rye, 1,257 wispel of barley, 2,126 wispel of oats. The chief exports were to Berlin and Hamburgh. The Danish blockade putting an end to all shipping business.

Görlitz.—The business done in cloth at Görlitz, the chief article of trade, was favourable not only to the merchant but to the manufacturer, and it was considered in all respects as most satisfactory, the only drawback being the absence of speculation with America. The connection with the East, with Italy, Sweden, Norway, and the States of the Diet have produced good sources for trade, and even towards the end of the year some business was done with America. There was also during the whole year a considerable business done in linen and cotton. Owing to the high price of cotton, perhaps, there was only a fourth of the business done in cotton goods, but the deficiency was made up by the business done in linen—a result produced by the employment in many instances of goods made of linen which were formerly made of cotton. This change has been of considerable advantage to the weavers who left the cotton for the linen business, as the wages have increased from 1½ to 1¾ and 2 thalers per man weekly. It is true that the railway in course of construction in the neighbourhood of Görlitz has considerably raised the prices wages. The opening of this railway will give a considerable impetus to the trade, and new factories are in course of course of construction, the factories can be easily supplied with the Waldenburg coal. The manufacture of cloth has made considerable progress during the last year, as may be seen from the improvement and enlargement of the existing factories, and the construction of new factories. The same thing has taken place at Spremberg, where formerly the manufacture of cloth was limited to certain qualities; but now most of the factories produce various coloured cloths made from French patterns. Spremberg consumes 35,000 to 40,000 centners of wool, producing 175,000 to 200,000 pieces of cloth. Factories have also been constructed at Muskau. Machine factories and iron foundries, which supply the machines used in the neighbourhood and the railways and agricultural implements, have found active employment during the whole year. On the other hand, there has been but very small demand for railway carriages. The principal establishment supplies about 600 carriages of all sorts. In less important branches of trade the business done was satisfactory. Although there was no diminution of activity in the cloth-works, as far as employment was concerned, up to March, yet the warlike aspect of Germany made itself felt, particularly with regard to German trade. This was seen at the Frankfort-on-the-Oder fair, where German cloth was quite neglected. Other articles of trade were not so much affected by the warlike turn. There was a decided improvement in the cloth trade during the month of April, and there was more export of this article to America.

Elberfeld.—The warlike position of affairs, and the possible consequences of it, could not fail to have effect upon the general trade. The effects of the Frankfort fair were less satisfactory, and there were great complaints of want of sales, particularly in the Zollverein; Elberfeld will probably have to make reductions in some of its branches of industry which supply goods to Europe, in order not to have too large a stock of goods on hand. At the beginning of the war in America the export from Elberfeld was small; it has since increased, and is now satisfactory. It was chiefly of silk goods and cloth. There has been full employment for the silk factories of Elberfeld and Langenberg, as well as for the cloth factories of Lenneper and Hückeswagen. There was but little business in raw articles. Woollen yarn fetched high prices; and there was a fall in the price of cotton goods and silk goods. There were 26,747 lbs. of silk prepared in the drying establishment during the month of February in 264 numbers, and there was a sale of 6,000 lbs. less than in January.

During the month of April the complaints of the dulness of trade were very great. The stocks increased, and there was no sale. The high exchange on

America stood in the way of export trade. The amount of silk prepared at the drying establishments was 34,597 lbs. in 289 numbers.

Düsseldorf.—The report from Düsseldorf states, that during the latter part of 1863 there was considerable business done in the coal trade, and that this branch of industry had been much improved by the acceptation by the 2nd Dutch Chamber of a proposal to do away with an import duty on fuel. There was a want of workmen in general. The iron trade was flourishing, and the number of orders given would give occupation for some time. This was also the case with the wrought iron trade. The demand for cloth was so great that it was necessary to procure additional hands. But the establishments which were in any way connected with cotton, such as spinners, weavers, dyers, were growing daily worse, in consequence of the high price of raw material; and such of them as still have employment are working up their old supplies. The tobacco trade was flourishing, and the manufacture of cigars was producing good results. There is only one important sugar refinery which appears to work with advantage. The navigation, which was in full swing in December, and which was only impeded by the want of water in the Upper Rhine, was put an end to by the frost.

There was no very great change in the always variable coal trade of Düsseldorf: large quantities could have been supplied had there not been a scarcity of workmen. The transport of it by the Rhine was stopped by the frost in February, and the prices remained low, as was also the case with regard to raw iron. The iron rolling works, wrought iron works, cauldron factories, and machine factories, were fully employed, and had orders which would occupy them for some time. Screw makers and makers of tacks could not meet the demands. But chemical products did not find a ready sale. The prospects of the cotton industry were bad, but there was considerable activity in the cloth workers.

Up to the middle of April, there was a continued demand for coals, but no improvement in the prices. The iron trade was fully employed in March, and the orders continued. Sheet iron, iron bars, and wire tacks are sent by Holland to Stettin, and there was a great alarm lest the blockade of the ports in the Baltic should have put an end to this trade, but up to the middle of April the orders had not been countermanded. The demand in America for fine cloths had caused an improvement in this line of business, and large orders had arrived; and there had been a consequent demand for fine wool. There was no improvement in the cotton trade. Leather workers found full employment, as did the cigar and tobacco merchants.

Dortmund.—There was an increase in the amount of orders in the iron trade during 1863 generally; but there was a decrease in the demand for objects connected with railways, owing probably to the scarcity of railways now in process of being made. A rise in the price of iron is expected, as demands will probably be made for countries not belonging to the Zollverein which used to get their supplies from England.

Though there was in general an increase in the demand for coal, there was a fall in price; the attempts in single districts to raise the prices in the autumn were of no avail as regards the greater business. The trade in coal to the North of Germany is much impeded by the local railway arrangements, and the trade to the East is too small to be of much consequence.

The corn trade in 1863 was but very small, owing to the competition of America; the results of the harvest may be seen from the following figures:—

Wheat gave an increase of 11 per cent.; rye, of 13 per cent.; barley, of 6 per cent.; oats, of 1 per cent.; potatoes, of 19 per cent., above the average of the last ten years.

The prices in December 1863, were—For wheat, 2 thalers 13 silvergroschen per scheffel of 85 lbs.; for rye, 1 thaler 24 silvergroschen per scheffel of 80 lbs.; for barley, 1 thaler 15 silvergroschen per scheffel of 70 lbs.; for oats, 1 thaler 1 silvergroschen per scheffel of 50 lbs.; for potatoes, 20 silvergroschen per scheffel of 100 lbs.

During the month of March, notwithstanding the great competition, the coal trade was good, but the prices continued low. Great attempts are being now made to separate the coal, which is much facilitated by the use of a machine for this purpose, as it often happened that at the foundries such large pieces were found that they were not able to use them; such pieces are now sold for railway-engine purposes at 10 thalers per waggon (90 scheffel), which brings a profit of 2 thalers per waggon. A reduction of the freights for coal on railways has been of use, and trains carrying coal direct to Berlin have been arranged.

The iron trade was flourishing, and there was a greater demand for iron beams used in building houses.

The prices of grain were as follows—For rye, per scheffel of 80 lbs., 1 thaler 20 silvergroschen; for wheat, per scheffel of 85 lbs., 2 thalers 10 to 2 thalers 12 silvergroschen; for barley, per scheffel of 85 lbs., 1 thaler 13 silvergroschen; for oats, per scheffel, 1 thaler 3 silvergroschen; for potatoes, per scheffel, 20 silvergroschen.

In consequence of the good yield of rape-seed in the previous year, and particularly of the amount of oil, the prices took a downward tendency.

The state of the iron trade of Dortmund and its neighbourhood has not altered for some time. It has been calculated that there has been an increase of the production of raw iron to the amount of 10 per cent. in 1863 over that of 1862. One Company supplies in one month 2,250,000 lbs. of iron. The price usually paid is $12\frac{1}{2}$ to $12\frac{3}{4}$ thalers per 1,000 lbs., giving a profit of 2 thalers per 1,000 lbs.

Large quantities of tin plates are sent from the Rhine and Westphalia to England. There was considerable business during March and April in coals; there was a considerable supply sent to Holland; and owing to the high price of water-carriage, German coal is now taken instead of English. Larger prices are paid for gas coal.

The prices of grain were—For wheat, per scheffel of 85 lbs., 2 thalers 12 silvergroschen; for rye, per scheffel of 80 lbs., 1 thaler 21 silvergroschen; for barley, per scheffel of 70 lbs., 1 thaler 23 silvergroschen; for oats, per scheffel of 50 lbs., 1 thaler; for potatoes, per scheffel of 100 lbs., 20 silvergroschen; for hay, per scheffel of 100 lbs., 1 thaler 5 silvergroschen; for straw, per scheffel of 100 lbs., 20 silvergroschen.

During the month of April the demand for coal was so great that the supplies were nearly exhausted, which caused a rise in the price to the amount of 4 pfennings per scheffel.

Crefeld.—The silk factories of this district were, during the month of December, generally well employed, although the sale to the North, and to the States of the Zollverein, was naturally depressed by the apprehensions of war; and the war in America had a considerable effect in reducing the sale to that country. The prices of raw silk did not diminish in December; the price of European silk, in respect to quality, stands at a lower price than the Asiatic; the latter is consequently much less used than the former. In the drying establishment of Crefeld 67,544 lbs. were prepared. There was but little change in the trade of this article at Gladbach in the neighbourhood of Crefeld. With the continued want of cotton, and the high price of such as can be got, little business is done, and, consequently, there were but few manufacturers who were able to make any profit.

Trade in grain and flour was tolerably lively: according to the market reports of January the prices paid were for wheat 200 lbs., 5 thalers 25 silvergroschen; for rye, per 200 lbs., 4 thalers 15 silvergroschen; for barley, per 200 lbs., 4 thalers 15 silvergroschen; for oats, per 200 lbs., 3 thalers 26 silvergroschen; for potatoes, per 100 lbs., 17 silvergroschen. The amount of winter seeds was satisfactory.

The silk factories of Crefeld during the month of January had but little occupation; and though there was some employment for the factories of velvet and velvet ribbons, the European and North American complications caused the smooth and figured stuffs to suffer, and the trade feels the effects of the bad state of the Exchange at New York.

The prices of silk fell a little. There were prepared in the drying grounds 60,631 lbs. of silk, chiefly Italian, as the prices of the Asiatic silk were comparatively high. There was a slight fall in the prices of grain in January and February.

According to reports received from Yokohama of the 30th of January, it appears there is a great scarcity of fine silk. The Japanese merchants state they were obliged to sell large quantities of silk of superior quality to the silk factories of Kioto, and that they had to send silk to Nagasaki. There were exported in January 1,538 bales of silk.

There was but slight change in the trade of Crefeld during the month of March as regards silk. Velvets were sent to England. There were prepared in the drying grounds 60,913 lbs. of silk in March, of which 11,000 were Asiatic silk. The number of workmen in the factories of Gladbach was reduced; the prices of grain were for wheat, 200 lbs., 6 thalers; for rye, 200 lbs., 4 thalers 5 silvergroschen; for barley, per 200 lbs., 4 thalers 15 silvergroschen; for oats, per 200 lbs., 4 thalers 6 silvergroschen; for potatoes, per 100 lbs., 18 silvergroschen.

During April there was more activity in the silk trade. The velvet factories were in full employment, and the prices generally were good; 68,000 lbs. of silk were prepared in the drying grounds, chiefly European, as the prices of Asiatic silks were too high; there were 14,500 lbs. of Asiatic.

Aix-la-Chapelle.—During the month of March, the orders given to cloth factories and such branches as belong to them were so great that it was supposed they would find ample employment for some time. The same success attended the iron and coal trades. There was less demand for needles, but judging from the increase of building, Aix may be said to be in a flourishing condition. During the month of April trade and commerce were satisfactory, but at the same time there is a great desire to see an end put to the war in America, as a large amount of cloth is sent to both North and South America. Spinners found ample employment, particularly those that prepare the yarn ("streich-yarn") for the cloth workers. The demand for yarn is not confined to Prussia, as it is also much taken for England, and particularly for Scotland. The improvement in the machinery and the care exercised in the treatment of the labour causes the demand to be made more in proportion for the middling and coarser sorts than for the finer, particularly as the finer are too expensive. The middling and coarser wools are also more chosen, and on this account large quantities of La Plata and Cape wools are used; there is also a great use made of the so-called artificial wool ("Kunstwolle"), such as shoddy of flannel and unfulled rags, and mungo of fulled and used cloth articles. From these a small coarse substance is made, but which, from the excellence of the machinery, produces a good appearance at a small price. The finer sorts of wool from Silesia and other Provinces of Prussia which ten or fifteen years since were paid 150 thalers are now sold at 110 thalers, but coarser and middling wool, which formerly was sold at 40 thalers, now finds a ready sale at 60 thalers. This is partly owing to a change of taste, but also to the fact that the machinery is now able to produce a superior article from the primary matter. There was considerable activity also in the coal trade, and a want rather than a surplus of coal was expected. There was full employment for the iron trade in all its different branches, with the exception of articles used for railways. There is a large business done at Aix in needles which are sent to all parts of the world except France, where they are prohibited. Large looking-glasses are made at Aix-la-Chapelle as well as plate glass, and the demand for the latter was considerable. A large number of hands are employed in making cigars, and they found full employment, The silver produced last year by the Stolberg Company amounted to 7,500 lbs., valued at 223,000 thalers.

Königsberg.—The following statistics from the years 1861, 1862, and 1863 show the benefit that Königsberg has derived from the construction of the Oberland Canal.

There was a diminution, in 1863, of rafts of wood sent down the canal in consequence of the large supplies which had been already sent in 1861 and 1862; added to this, the supply of wood was not so large as usual in the winter of 1862-63.

The goods sent down the stream to Elbing were:—

In the critical state of politics during the months of January and February it was not to be expected that much business would be done. There was a large supply of grain from the interior in January; but as the chances of maintaining peace with Denmark decreased, and the chances of war with England increased, together with the probability of a blockade, so did the spirit of enterprise diminish, and the prices fell. At the end of January they were:—

Wheat	per scheffel of 121–133 lbs.	50–60	silvergroschen.
Rye	,, 117–125 lbs.	31–34	,,
Barley	,, 104–113 lbs.	26–29	,,
Oats	,, 70– 90 lbs.	18–26	,,
Grey peas	per scheffel	34–40	,,
White peas	,,	39	,,
Beans	,,	40–48	,,

The trade in spirits remained during the month dull, and the prices varied between 13 and 13$\frac{1}{6}$ thalers per 8,000 per cent tralles. The flax trade was also very limited. The greatest buyers are the German spinners, but they cautiously wait till politics are more settled. At the flax fair which took place on the 3rd, 4th, and 6th of February at Braunsberg, no flax was bought by German spinners, and the large supply of 8,000 centners remained unsold. The prices at the end of the month were from 14$\frac{1}{2}$ to 15 thalers for Russian flax, and 15 to 16 thalers for Oberland flax. The shipments too during the month were inconsiderable, and the land transport was rendered more difficult by the ice not being thick enough to bear the carrying waggons sent to Pillau.

The shipment consisted of:—

To England—Wheat	922	lasts in	5	vessels.	To Holland—Wheat, rye, linseed	132	lasts in	1 vessel.
Peas	380	,,	4	,,	To Denmark—Rye	28	,,	1 ,,
Beans	100	,,	1	,,	To Norway—Rye	30	,,	7 ,,
Barley	73	,,	1	,,	To Sweden—Rye	170	,,	4 ,,
Vetches	225	,,	1	,,				
Linseed	200	,,	1	,,				
Flax and tow	528	,,	3	,,	Total			29 vessels.

There was a stagnation of trade in the months of February and March owing the continuation of the war with Denmark, and the certain prospect of a cessation of communication for trade purposes with the sea. The price of produce, particularly grain, was low, as foreign merchants who buy are not willing to buy the goods "free on board," but require the sellers to undertake the "freight and costs." Thus there was little business done with foreigners; and such as was done, was with the stipulation "free of blockade." There is a large store of grain at present at Königsberg. Red wheat, which was paid in March at 53$\frac{1}{2}$ to 59 silvergroschen per scheffel, could now be sold for England at 67 to 69$\frac{1}{2}$ silvergroschen, the sellers undertaking freight and costs. Sweden and Norway seemed inclined to buy. No great supplies were sent to the market owing to the small prices offered; with the exception of rye and barley there was a fall in prices, and at the end of February the prices paid were for:—

Wheat	per scheffel of 117–130 lbs.	44–59	silvergroschen.
Rye	,, 114–126 lbs.	32–35$\frac{1}{2}$	,,
Barley	,, 98–113 lbs.	24–30	,,
Oats	,, 70– 90 lbs.	16–24	,,
Peas, white	per scheffel	37–40	,,
Peas, grey	,,	38$\frac{1}{2}$	,,
Beans	,,	40–46$\frac{1}{2}$	,,

Trade in spirits remained during February unanimated, and was chiefly confined to the requirements of the province. The large supplies from Königsberg and West Prussia found only a poor sale at $12\frac{5}{8}$ to $13\frac{1}{6}$ tralles per 8,000 per cent tralles. There was some business done in linseed oil, which was sold at 13 thalers per centner for soap refineries. There was a considerable demand for flax from the Silesian and Westphalian spinners during all February, but owing to the high prices asked not much business was done. There were considerable supplies of flax by railway from Russia, which remained in store at Königsberg unsold. Such as was sold was taken at the following prices: Russian flax 15 thalers per centner; Slanitz 11 to 12 thalers per centner; Oberland crown flax from 15 to 16 thalers per centner. The navigation was free earlier than usual, about the middle of March, and towards the end of that month some business was done in grain. There was a rise in the price of wheat to the amount of 4 to 6 silvergroschen, and of rye to the amount of 2 to 3 silvergroschen per scheffel. Large supplies were sent in from the country and from the small market towns, and it was expected there would be a great deal of business done, provided there was a reduction in the prices of freights, which were unusually high. There were some commissions for wheat from England, for rye from Holland, Norway, and Sweden.

At the end of the month the prices paid were—

Wheat ..	per scheffel of 124–130 lbs.	$53\frac{1}{2}$–$60\frac{1}{2}$	silvergroschen.
Rye	„ 117–127 lbs.	32 –$35\frac{1}{2}$	„
Barley ..	„ 102–112 lbs.	27 –$31\frac{1}{2}$	„
Oats ..	„ 50– 54 lbs.	16 –20	„
White peas ..	per scheffel	36 –40	„
Grey peas ..	„	34 –40	„

There was little demand for spirits, and the price was $12\frac{5}{6}$ to 13 thalers per 1,000 per cent. tralles. About 500 lasts of linseed were bought on English account towards the end of the month. The prices were—

Fine linseed ..	per scheffel of 108–112 lbs.	70–85	silvergroschen.
Middling ditto ..	„ 104–110 lbs.	50–70	„
Ordinary ditto ..	„ 96–106 lbs.	35–50	„

Business in oils was more active. Linseed and rape-seed oil were bought for Rhenish and South German account. Prices paid were 13 thalers 5 silvergroschen per centner for linseed oil, and $11\frac{1}{4}$ thalers per centner for rape oil. There was little business in hemp, but more in flax, which is bought for the Bohemian and Silesian spinners. The prices paid per centner were—

	Thalers.		Thalers.
Russian flax	$15\frac{1}{2}$–16	Polish	9–11
Oberland Kron	16 –17	Fine flax-tow	10–11

There came from Norway 20 ship-load of herrings, which sold for $5\frac{1}{2}$ thalers the tonne. The vessels took back with them rye.

During March, 94 vessels arrived at Pillau and 19 left it. Freights were unusually high.

Trade increased a little after the beginning of April, the high price of freights having attracted neutral vessels. The Danish blockade was less felt at Königsberg, in consequence of its connection by water with Memel. Coals, iron, herrings, and Colonial produce, in consequence of the increased expense of traffic abroad, rose in price; and Russian and Polish goods were taken to Memel instead of coming to Königsberg. The corn trade in the early part of April received a considerable impulse from the feeling for wheat, which was better in the English markets; and there was so large a demand for rye for Sweden and Norway that the large number of vessels coming from there were occupied in carrying it. The notification of the blockade had but little effect upon the prices. At the end of April the prices were—

Wheat ..	per scheffel of 124–132 lbs.	55–65	silvergroschen.
Rye	„ 117–126 lbs.	34–$38\frac{1}{2}$	„
Barley ..	„ 108–113 lbs.	29–31	„
Oats ..	„ 50 lbs.	19–21	„
Peas, white ..	per scheffel	38–42	„
Peas, grey ..	„	36–42	„
Beans ..	„	43–46	„

From 2,500 to 3,000 lasts of grain of all sorts were sent for shipment by Memel, chiefly wheat and rye. Owing to the high prices, there was little business done in flax; some 3,000 to 4,000 centners were sent in the course of the month to Silesia,

Bohemia, and France, at prices from 10 to 12 thalers per centner. Norwegian ships brought herrings, before the opening of the blockade, to the amount of 28,000 tonnen, and vessels from Scotland to the amount of 2,000 tonnen; the former were sold at from $6\frac{2}{3}$ to $6\frac{5}{6}$ thalers per ton; the latter, at $8\frac{2}{3}$ to $8\frac{5}{6}$ thalers per ton. There was a good traffic with ships in the Pillau harbour, when it is taken into consideration that none could enter after the 19th.

There arrived with—	Ships.	There arrived with—	Ships.
Ballast	91	Cement and tiles	4
Gun-metal	8	Salt	2
Herrings	46	Pitch	1
Coals	28	Wine and plaster	1
Iron	3		184

There left 245 vessels:—

	Lasts.	Vessels.		Lasts.	Vessels.
For England—			For Denmark—		
Wheat	2,655	19	Rye	39	1
Peas	461	7	For Holland—		
Oats	643	7	Rye	2,457	32
Barley	474	4	Wheat	339	5
Beans	106	1	Peas	247	2
Oil-cake	162	3	Linseed	29	1
Rags	120	1	Hemp	46	1
For Norway—			Barley	389	4
Rye	2,982	67	For Belgium—

During the early part of January the communication by water with the Haf was entirely put an end to by the frost, which, joined to the continued dulness of the English market, had a depressing effect upon the corn trade; the shipments, therefore, during that period were of very little importance. The prices paid for grain were, in January,—for wheat, 55 to 70 silver-groschen per scheffel; for rye, 34½ to 37 silver-groschen per scheffel; for peas, 38 to 42 silver-groschen per scheffel; for barley (small), 30 to 32½ silver-groschen per scheffel; for barley (large), 31 to 35 silver-groschen per scheffel; for oats, 22 to 23 silver-groschen per scheffel.

The price of spirits of wine was 12¾ thalers per 8,000 per cent.

There were imported by railway, in January, 4,418 lasts of wheat, 889 of rye, 287 of barley, 54 of peas, 11 of oats. The amount of grain in store at the end of January was 16,400 lasts of wheat, 2,810 of rye, 460 of barley, 180 of oats, 530 of peas, 1,060 of rape, 190 of linseed, making a total of 21,630 lasts.

There arrived in the Neufahrwasser 19 sailing-vessels and 10 steamers. There sailed 64 sailing-vessels and 15 steamers. Of the vessels which sailed 49 took grain, 22 wood, 6 various goods, 2 ballast.

Up to the middle of April the fear of a blockade appears to have had a very depressing effect upon trade. The river navigation opened the middle of March.

The prices paid for various kinds of grain were:—

For wheat, from 55 to 69 silver-groschen per scheffel; for rye, from 35¼ to 37 silver-groschen; for peas, from 36 to 42½ silver-groschen; for barley (small) from 27 to 30 silver-groschen; for barley (large), from 28 to 33 silver-groschen; for oats, from 22 to 24 silver-groschen.

The price of spirits of wine was 12 1/12 thalers per 8,000 per cent.

There were sent during the month of April, by river, 2,289 lasts of wheat, of which 366 from Poland; 785 lasts of rye, of which 222 from Poland; 74 lasts of barley; 55 lasts of rape seed. There were sent by railway 3,162 lasts of wheat, 1,403 of rye, 431 of barley, 19 of oats, 66 of peas, 23 of vetches. The stock at the end of March consisted of—

	Lasts.		Lasts.
Wheat	18,120	Peas	630
Rye	3,820	Rape and turnip	680
Barley	920	Linseed	100
Oats	140		24,410

During March there came into Neufahrwasser—

Sailing-vessels	92
Steamers	13
	105

There left it—

Sailing-vessels	23
Steamers	16
	39

Of the vessels which left, the cargoes were 36 grain, 3 various goods.

The blockade which took place on the 19th of March produced a fall in the price of wheat of 15 to 20 florins per last; but, as buyers were not wanting, it soon rose again; it was the same case with rye. The prices at the end of the month were,—for wheat, 55 to 68 silver-groschen per scheffel; rye, 36½ to 38½; peas, 39 to 43; small barley, 28 to 31; large barley, 29 to 33; oats, 22 to 24 silver-groschen per scheffel.

Spirits of wine rose in price, and was paid up to 14 thalers per 8,000 per cent.

There were sent to Danzig during April, by river, 7,000 lasts of wheat, of which 4,371 lasts from Poland; 3,804 lasts of rye, of which 2,325 from Poland; 640 lasts of barley; 302 lasts of oats; 150 lasts of peas, of which 90 from Poland; 1,890 deal balks; 4,648 sleepers; 495 shoek willow bands for casks; 94 shoek of staves. By railway, 1,423 lasts of wheat, 912 lasts of rye, 461 lasts of barley, 28 lasts of peas, 21 lasts of vetches.

The stock of grain at the end of April was—18,150 lasts of wheat, 3,820 lasts of rye, 460 lasts of barley, 110 lasts of oats, 660 lasts of peas, 390 lasts of turnip and rape seed, and 90 lasts of linseed, making a total of 23,680 lasts.

During April there came by the Neufahrwasser 142 sailing-vessels and 13 steamers; total, 155 vessels. There left 170 sailing-vessels and 19 steamers; total, 189 vessels. Of the vessels which arrived, 108 had ballast, 23 herrings, 10 coals, 6 salt, 3 slates, 2 railway rails, 3 various goods, 2 ballast. Up to the end of April 309 vessels had arrived; at the same period in 1863 there had arrived 790. The wood trade suffers more than others from the war and blockade, as the export takes place in native ships, and seldom in those of foreign countries. The supply of wood from Poland was considerable.

Thorn.—There was a general tendency to fall in the prices of grain during the month of January, with the exception of wheat, for which there was a slight demand between the 5th and 12th of January. The fear of war caused a slight demand to be made in England, which had the effect of causing some large steamers to carry it to Danzig. Rye went at low prices to Berlin and Stettin. The harvest or yield of grain in general, and more particularly of rye, was very good in 1863. The large supply of grain, the state of the political horizon, and the alarm as to a general war and a blockade, put an end to all speculation. Prices at Thorn are entirely influenced by prices abroad.

Wheat in January was paid from 36 to 50 thalers per 25 scheffel, but rose in the middle of the month to 38 to 52 thalers, and at the end of the month was 34 to 38 thalers. Rye early in January was paid from 26 to 28 thalers, and at the end of the month 25 to 26½ thalers per 25 scheffel. Peas for cooking were from 28 to 30 thalers; fodder, 26 to 28 per 25 scheffel; barley, large, 25 to 27 thalers; small, 20 to 24 thalers; oats, 16 to 18 per 25 scheffel. The supplies were considerable, and a large portion of them went direct to the railway, as the proprietors, since the construction of the railway and the bridge, now send their wheat to Danzig. The supplies in January were, of wheat, 800 lasts, of rye 600 lasts, of peas 50 lasts, of barley 50 lasts, of oats 5. There were exported by railway, of wheat 590 lasts, of rye 350, of peas 7. There were put in store 200 lasts of wheat, 300 lasts of rye, 43 lasts of peas, and 50 of barley.

The month of March brought but slight variation in the already low prices of grain. The transport by water began early in March; the freight by water being low, more is sent by that means than by railway.

There were sent by water in March—

	Lasts	Scheffel.
Wheat	886	42
Rye	814	47
Peas	7	10
Total grain	1,708	39

There were sent by railway early in March—

	Lasts.
Wheat	110
Rye	78
Peas	6½
Barley	3½
Oats	8
Total grain	206

There were shipped in March—

	Lasts	Scheffel.
Wheat	996	42
Rye	892	47
Peas	13	40
Barley	3	30
Oats	8	0
Total grain	1,914	39

There were shipped since the beginning of the year—

	Lasts	Scheffel.
Wheat	2,018	42
Rye	1,466	47
Peas	31	40
rley	20	30
ts	8	0
Total grain	3,545	39

The supplies during the month of March amounted to—

	Lasts.
Wheat	600
Rye	500
Peas	10
Oats	10
Total grain	1,120

The stock at the end of March was—

	Lasts.
Wheat	1,000
Rye	800
Peas	110
Barley	45
Oats	40
Total grain	1,995

The prices paid at the end of March were, for wheat, 36 to 50 thalers per 25 scheffel; rye 24 to 26 thalers; peas 26 to 28 thalers; barley 20 to 26 thalers; oats 17 to 19 thalers.

Notwithstanding the blockade there was considerable business in grain during April, owing to a demand at the Berlin market. Rye rose from 3 to 4 thalers per wispel. Wheat rose from 5 to 6 thalers per wispel. About 400 barges of grain, coming from Poland and going to Danzig, were taken to Berlin and Stettin.

There were shipped by water—

	Lasts	Scheffe
Wheat	320	40
Rye	587	20
Peas	44	41
Total grain	952	41

By railway—

	Lasts	Scheffel.
Wheat	23	50
Rye	10	30
Peas	4	0
Total grain	38	20

There were exported since the beginning of the year—

	Lasts	Scheffel.
Wheat	2,363	22
Rye	2,064	37
Peas	76	21
Barley	24	30
Oats	8	0
Total grain	4,536	40

The stock amounted to 760 lasts of wheat, 400 of rye, 64 of peas, 40 of barley, 30 of oats. The imports supplied amounted to 100 lasts of wheat, and 200 of rye.

Glogau.—If up to the end of April there was less business done as regards goods and manufactures in general, the explanation of this may be found in the state of politics and the low prices of grain. There was a very small demand for cloths in February, but it was a little better in March; and though the cloth factories have at present enough occupation, the prices of wool remain low. This is explained by the use of refuse of wool for new manufactures, and in the increased use of Australian wool.

In the beginning of May the cloth factories had full employment and extensive orders. The sugar refineries did not do so good a business, and the expectation that the high prices of raw sugar would produce a corresponding price for refined sugar was not realized.

Halle.—There was a general dulness in trade at Halle, owing to the alarm of war in January. About 50,000 centners of sugar was bought at good prices, and towards the end of the month raw sugar was paid from $11\frac{3}{4}$ to 13 thalers, raffinade $16\frac{1}{2}$ to $17\frac{3}{4}$ thalers, per centner. There has been lately established a factory of photogène at Merseburg, in this neighbourhood; it was expected that it might

meet with great competition with the American petroleum, but it has been found that it can be mixed with great advantage, and makes what is called solar oil. The demand for this article is now so great that it cannot be supplied fast enough. The price of solar oil was, in the spring of 1863, 7 thalers per centner, but was in February 1864, 9 and 9½ thalers per centner. Photogène cost at the same period 10½ to 11½ thalers per centner. A middling sort of paraffin is taken for candles, and the better sorts do not find a ready sale. Paraffin of the best quality is sold at 33 thalers per centner; middling quality, at from 30 to 24 thalers per centner; lower sort, 24 to 18 thalers per centner. It is not expected that the market will be overstocked with this article, as only a limited quantity of the substance can be extracted from the brown coal.

During the month of February there was little change in the business of this neighbourhood, and all branches of trade felt the effects of the pressure of the political circumstances. The only exception was wheat starch, in which more business was done at tolerable prices; at the end of the month the price paid was 6 thalers per centner. Caraway-seed, of which there was only a small supply, rose to 9⅙ thalers per centner. There was a small export of wheat to the Rhine, and of barley to North Germany. The alarm as to a blockade prevented there being much demand for barley on English account.

There was more or less demand during the whole month for raw sugar, and the high prices paid for Colonial sugar in London and beet-root sugar in France caused some speculation in this article for export. There was a sale of about 53,000 centners of raw sugar. The prices for refined goods were not in just proportion to those for raw goods. On the 29th of February the prices, according to quality, were—for raw sugar, 13¼ to 12 thalers per centner; for raffinade, 17¾ to 16¼ thalers per centner. During the month of March trade was dull; there was some demand for wheat to the Rhine and South Germany. Prices were—for wheat, 50 to 53½ thalers per wispel; rye, 32 to 35 thalers per wispel; barley, 29 to 31 thalers per wispel; oats, 21 to 22 thalers per wispel.

This country produces a large amount of caraway-seeds and starch; the latter was sold at 4⅔ to 5¾ thalers per centner; the former, at 9 thalers per centner. There was but little change in the price of sugar, of which about 50,000 centners was sold. It is calculated there are in the 70 factories about 120,000 centners of raw sugar. On the 31st of March the prices were—for raw sugar, 13⅓ to 12 thalers per centner; for refined sugar, 17¾ to 17⅛ thalers per centner; melis, 17 to 16¾ thalers per centner.

There was a demand in April for wheat for the Rhine and for South Germany. The reduction of the duty in England on the import of sugar was also beneficial, and there was a sale of 50,000 centners. There was a demand, too, for woollen goods; many factories formerly employed in making cotton goods now work woollen and half woollen. Arms are supplied from Halle to Italy, Wurtemberg, Nassau, and the Russian Government.

Magdeburg.—The corn trade in April seemed to take a better turn, and there was a greater demand for wheat from South Germany, for rye from Hanover; Westphalia and the western parts required more, and there was an increased demand from Hamburgh for large supplies of wheat for Belgium, France, and Scotland. Better prices were paid for barley for England. During the seed time only small supplies came from the country.

Only little business was done in sugar early in the month of April, raw as well as refined. It is calculated there must now be a supply of 290,000 centners of raw sugar in the province and in the factories of the Anhalt Duchies; a rise in the price is expected of raw sugar as well as of refined, before the new season sets in. About 85,000 centners of raw sugar were sold in March.

There was a great dulness during April in all branches of trade, with the exception of grain. There was a sale of raw sugar to the amount of 50,000 centners. The export of spirits of wine to Italy has ceased, and it is stated that this is caused by the bad feeling which exists in Italy towards Austria, and which prevents Italians taking goods from Prussia.

Statistics of the Town of Berlin, taken from official sources.

In 1863 there were born 11,885 males, of whom 1,988 were illegitimate; 11,416 girls, of whom 1,893 were illegitimate; total of legitimate, 23,301; total of illegitimate, 3,881; showing a proportion of 1 in 6 illegitimate. There died 9,399 males, of whom 1,079 were illegitimate boys; 8,203 females, of whom 2,045 were illegitimate girls; total, 17,602, of which 3,124 illegitimate children; to every 8 deaths 1 illegitimate child. There were born 5,699 more than died; in 1862 there were born 21,364 children, and in 1863, 23,301; increase in 1863, 1,937. There died in 1862, 15,060; in 1863, 17,602; showing an increase in 1863, of 2,542. The population of Berlin increased from births by 5,699 persons, by ingress, 7,218; total, 12,917. At the end of 1862, the total amount of the population of Berlin was, including 3,805 military, 539,103. The present amount, including the above 12,917, is 552,020.

There were married in 1863, 6,562 pairs. Of strangers there came to Berlin, foreigners, 45,690; of people of the country, 80,923; of journeymen, 6,529, total, 133,142.

Of newspapers there were announced at the bureau, 151; 9 appearing twice in the day; 16 appearing once a day; 3 appearing 3 times a week; 7 appearing twice a week; 64 appearing once a week; 9 appearing twice a month; 43 appearing once a month.

There were submitted to the theatrical censorship, 191 new pieces.

The consumption of meat was, according to the number of animals brought into the town, 47,249 oxen; 136,338 pigs; 68,715 calves; 274,174 sheep; making a total of 526,476 head of cattle for slaughter. According to the calculation made, there were used 525,916 centner of meat, on an average one centner per person.

Of public vehicles there were licensed on the 1st January, 1863, 40 omnibus lines, 279 omnibuses, 1,584 cabs (droschkies), 496 carriages standing at gates of the town, making a total of 2,395; to which were added in the course of 1863, 15 omnibuses, 208 droschkies, 14 carriages standing at the gates, making a total of 237; and a grand total of 40 lines of omnibuses, 1,792 droschkies, 510 carriages standing at the gates; total, 2,596. Of fines there were 490, and there were paid compensation for fines in 1862, 204,583 thalers; in 1863, 94,170 thalers; showing a diminution in 1863 of 10,412 thalers.

The police attending to morals ("Sittenpolizie") had to do with 1,019 women under their control, with 8,705 not under their control, making a total of 9,724; in 1862 with 8,732, giving an increase of 992. There were of suicides 56 men, 17 women; total, 73; by strangulation, 10 women; from shooting, 25 men; from stabbing, 2 men; from cutting the throat, 2 women; from poison, 6 men, 11 women, total, 17; from jumping out of the window, 1 man; from putting themselves on the lines of the railway, 1 boy; total, 90 men, 40 women, and 1 boy; grand total, 131. There were murdered, 2 men, and 1 woman.

Netherlands.

Report by Mr. Ward, Her Majesty's Secretary of Legation, on the Finances of the Netherlands.

The Hague, January 11, 1865.

THE Finances of the Netherlands have now for some years been in a very prosperous condition. The nation has not only been able to close the accounts for many years past (one only excepted) with a considerable balance, but has redeemed a large portion of the public debt, and has expended over and above the considerable sums requisite for maintaining the public works upon which the existence of the country may be said to depend, many millions of florins on others which might have been constructed by means of loans without prejudice to considerations of well-understood economy. And yet it may be a matter of surprise to some to learn that the ordinary revenue of the country has fallen short of what is necessary to meet its

ordinary expenditure for years by an amount of nearly one-seventh. The differenc is more than made good by the profits of the management of the property of th country in the Eastern Archipelago, a property nominally and in theory under th control of the Sovereign, without the interference of the Legislature, but in point o fact accounted for to the latter by the responsible Minister of the Colonies.

In order that an idea may be formed in England of the amount of relie afforded by the Colonial Budget to the public burdens, we might imagine th Chancellor of the Exchequer, in his statement to the House of Commons, announcing that he should require 70,000,000*l.* for the charges of the year, but that he shoul not call upon the taxpayer to furnish more than 60,000,000*l.*; nay, that he ha reasonable expectations of realizing so ample a profit that he could undertake t redeem 10,000,000*l.* of the national debt, and at the same time to lay out a millio or two in the construction of harbours of refuge or other useful public works. Th income-tax and great part of the malt-tax might be dispensed with under suc flourishing prospects; and, in point of fact, the people of the Netherlands enjo without perhaps being fully sensible of their good fortune, a relief from equivalen burdens.

We may now consider first what their ordinary expenditure is, and what th extraordinary, understanding by those expressions such charges on the one hand a are indispensable for the purposes which all Governments have to carry out, and o the other, such as might be omitted without prejudice to the public service, or b provided for by loans, as being either directly remunerative, or indirectly conducive to the material prosperity and resources of the country: and in the second place the ordinary and extraordinary sources and amount of the public income. For thi purpose reference will be made to the results of the year 1863, being the latest fo which the actual expenditure is ascertained, as distinguished from the Estimates comparing them, as the case may require, with those of the year subsequent t 1850.

The whole charge for the maintenance of the Courts of the Sovereign, the Quee Mother, and the Prince of Orange, is now 900,000 florins. The increase on this hea since 1850 has been 100,000 florins, the income allowed to the Prince of Orange.

Next in order is the charge for the High Departments of the State, namely, th two Chambers of the States-General, the Council of State, the Audit Office, th Office of the Chancellor of the two Orders of Knighthood, and the Royal Cabinet The Members of the First Chamber are not paid for their services, but they receiv an allowance for travelling expenses and their residence at the Hague. Th Members of the Second Chamber receive an annual allowance of 2,000 florins each besides their travelling and lodging expenses. As the number of Members i augmented in proportion to the population of the country, this item has been pro gressively increasing. The whole expenditure under these heads was in 186 570,135 florins (about 49,200*l.*), being in excess of that for 1851, 37,500 florins.

The charge for the Diplomatic and Consular Establishments, and for th Ministers' salary and allowance for representation, together with pensions an miscellaneous disbursements of the Department, was 491,738 florins (about 41,000*l.*) 20,000 florins more than in 1851.

The Roman Catholic Church Establishment costs to the State 662,957 florins including the expenses of Administration, 16,433 florins. This is a charge whic naturally increases with the increase of the population; accordingly in 1851 it i found that the sums appropriated to this Department was 530,816 florins.

The administrative expenses of the Department of Protestant Worship amoun to 18,622 florins; but both in this and the corresponding office for the Affairs of th Roman Catholic Church, considerable reductions have been effected, mainly by th suppression of the Ministers at the head of the two Departments in 1862. Th amount of State support afforded to the several Protestant Churches is 1,449,53 florins, and to the Jews, 35,239 florins, which, together with pensions and othe charges, makes a total of 1,717,230 florins for this Department, exceeding that fo 1851 by a little more than 100,000 florins. The entire expenditure on Publi Worship then, amounts to 2,380,187 florins (about 200,000*l.*).

The salaries of Judges and Magistrates and Officers attached to the differen Courts of Justice, and the other expenses of those Courts, are defrayed with a sum of 1,163,665 florins. The cost in matters connected with the prosecution of offender amounted to 202,307 florins, and such part of that of the police and the executio of the game laws as is borne by the State to 286,743 florins. The charge for prisons penitentiaries, and houses of detention, was 635,691 florins, making, together wit

he maintenance of buildings, pensions and some other trifling charges, the whole xpenditure of the Department of Justice 2,826,995 florins (about 236,000*l.*) against ,074,229 in 1851.

In order to carry out the distinction between ordinary and extraordinary xpenditure, it will be necessary to make a deduction from the total sum carried to he account of the Department of the Interior for 1863 of the following items, amely, for the improvement of the port of Rotterdam by opening a new channel f the Maas, 114,665 florins, and for railways, 10,000,000 florins, together with one hat belongs more properly to the military expenditure of the country, namely, the ost of enlistment of conscripts and the national guard, to the amount of 55,350 lorins; making altogether, 10,170,015 florins. The remaining charges of the)epartment are as follows:—

	Florins.
Salary of Minister, Secretary and Clerks, and expenses of the office	184,871
Expenses of Provincial Administration	557,272
Expenses connected with the Public Health	60,849
Miscellaneous, belonging to the Internal Administration	7,881
Staff of Civil Engineers and Public Works	4,454,737
Education	784,195
Arts and Science	134,452
Maintenance of the poor	215,738
Official Gazette, and publication of the Proceedings of the Chambers	61,155
Industrial Establishments	95,176
Telegraphs	467,680
Pensions, &c.	276,079
Unforeseen Expenses	13,155
	7,313,240

(About £612,000.)

The cost of the navy of the Netherlands, as far as it is defrayed out of the evenue of the mother country, was, in 1863, 8,473,287 florins (about 707,000*l.*). The charge of that portion of it which is employed in active service in the Eastern Archipelago is borne by the budget of their Eastern Possessions. The Marine)epartment is also charged with the expenses of the pilotage service, lights and eacons, hydrography, and quarantine, to the amount of 911,577 florins, in addition o the cost of the military marine as above, so that the total is 9,394,864 florins. The whole charge of this branch of the public service for 1863 exceeded that for 851 by 4,320,000 florins.

The army and the other establishments connected with the defence of the ountry by land required an expenditure of 12,336,790 florins (about 1,300,000*l.*), howing an increase of two and quarter millions of florins over 1851.

The Colonial expenditure of the Netherlands, as far as it is carried to the ccount of the mother country, consists of the following items:—

	Florins.
Colonial Office	133,833
On account of the East Indian Possessions	240,799
Deficit on Management of West Indian and Coast of Guinea Colonies.. ..	2,378,520
Pensions	9,810
Unforeseen Expenses	15,396
	2 778,358

(About £240,000.)

The charge for the interests of the National Debt amounted to 28,908,269 lorins (about 2,410,000*l.*). Since the year 1850 this amount has been largely educed, the sum required for the same purpose in 1851 being 36,238,509 florins. The capital of the debt has been diminished since that period by the following tems:—

	Capital.	Saving of Interets.
	Florins.	Florins.
2½ per Cents.	143,622,630	3,590,565
3 per Cents.	17,960,118	538,803
3½ per Cents.	7,326,000	256,410
4 per Cents.	40,996,000	1,639,840
Id. Colonial Debentures	14,748,500	589,940
Exchequer Bills	9,799,950	391,998
Loans for Public Improvements at various rates ..	9,290,258	442.152
Charges on the public domain redeemed	..	23,590
Annuities	..	81,400
Interest on securities given by persons accountable to the public	..	18,600

A deduction, however, must be made for a capital of 1,893,500 florins 2½ per Cents., placed to the credit of the Crown domain, so that the sum of 7,525,964 florins represents the total diminution of this head of expenditure since 1850. The sums applied to the foregoing reductions were supplied by appropriations from the ways and means of the successive years to the amount of 37,216,306 florins; from the surplus of the services of the years from 1850 to 1861 inclusive, together with that of 1863, 117,126,796 florins; purchase money of State property, 16,359,362 florins; from the fund for security of the loan for draining the Haarlemmermeer, 911,323 florins; amount reverting to the State from the Orphan Chamber, 129,240 florins; part payment of redemption of the Scheldt dues, 9,253,133 florins; total 181,266,160 florins.

The remainder of the expenditure under the Department of Finance was as follows:—

	Florins.		Florins.
For the Department	284,079	Pensions, &c.	1,217,959
Management and Collection of the Revenue	3,931,239	Unforeseen Expenses	1,798
Post Office	1,199,920		
Mint	33,378		6,668,373
	(About 566,000*l.*)		

Miscellaneous unforeseen expenses appertaining to all the Departments of State, 46,356 florins.

RECAPITULATION OF THE ORDINARY EXPENDITURE FOR 1863:—

	Florins.		Florins.
Royal Household, &c.	900,000	Army	12,336,790
High Departments of State	570,135	Colonies	2,778,358
Foreign Department	491,738	Interest and charge of National Debt ..	28,908,269
Public Worship	2,380,187	Finance Department	6,668,373
Justice	2,826,995	Unforeseen Expenses	46,356
Home Department	7,313,240		
Navy	8,473,287	Total florins	74,605,305
Other charges of the Marine Department	911,577		

EXTRAORDINARY EXPENDITURE,

	Florins.		Florins.
Improvement of the port of Rotterdam ..	114,665	Compensation to Slave Owners in the West Indies	9,654,000
Railroads	10,000,000		
Redemption of debt	13,648,184	Total	33,416,849

The ordinary receipts of the revenue for 1863 were as follows:—

	Florins.		Florins.
Land Tax	10,427,747	Post Office	2,153,000
Personal Tax	7,414,982	Telegraphs	425,253
Licenses on trades and professions ..	3,084,173	Lottery	413,203
Excise	18,798,053	Game and fishing licenses	113,343

Plate Duties	275,355	Miscellaneous	1,318,832
National domain, viz.:—			
Ordinary 546,314		Total Ordinary Receipts ..	65,031,148
Belonging to War Department 88,334			
Road and Canal Tolls .. 707,738			
1,342,386			

EXTRAORDINARY RECEIPTS.

	Florins.
Colonial surplus for 1862	28,587,358
From Colonial surplus for 1863, viz.:—	
Payment for interest of debt charged to the East Indian Possessions ..	9,800,000
And—	
Payment to defray deficit on the management of the other Colonies ..	2,634,716
First instalment of redemption of Schelt Dues	5,713,880
From sales of national property	300,000
Surplus of the service of 1860	5,927,439
Part of surplus of 1861	167,180
Total extraordinary receipts	53,130,573
Add ordinary receipts	65,031,148
Total receipts	118,161,721
Deduct ordinary expenditure 74,605,305	
„ extraordinary expenditure 33,416,849	
	108,022,154
Surplus of 1863	10,139,567
But deducting from the ordinary expenditure, namely	74,605,305
The ordinary receipts	65,031,148
The deficiency on this account is	9,574,157

From the foregoing account of the extraordinary receipts of the year, it appears that 41,022,074 florins have been contributed by the East Indian possessions. It is, however, necessary to point out that this sum does not represent the favourable balance of the same year.

Previously to the year 1859 it had been the practice to appropriate to the Ways and Means of the current year the estimated surplus of the East Indian Revenue. It was, however, considered objectionable to reckon upon a resource of unascertained amount, and accordingly in the Estimates for the year 1859 credit was taken only for a balance of 3,800,000 florins belonging to the Indian Revenue for 1858, and 9,800,000 for the interest of the so-called Indian Debt out of the presumed surplus for 1859. The remainder of the surplus for 1859 was carried to the account of the service of 1860. A like amount of 9,800,000 florins has also in each year since been placed upon the Estimates, taken from the anticipated resources of the year. The result of this arrangement was that after the sales of Colonial produce belonging to the Government, a large balance remained unappropriated and unproductive in the public chest until the following year; so that it has now been found expedient to revert to the former practice, and to introduce in the Estimates for each year the whole anticipated balance of the Indian budget for the same year. Thus in the Ways and Means for the financial year 1864-65 now before the States-General, the Minister of Finance has taken credit not only for a portion of the ascertained surplus of 1864 but for the estimated surplus of 1865. It will be necessary to revert to this in the Report which I shall have to present in the usual course respecting the finances of the current year; but it is mentioned here incidentally in accounting for the amount of the contribution from the East Indian Revenue to the resources of the financial year under consideration.

It may be interesting to present here an account of the sums which have been supplied from the same source in aid of the revenue of the Netherlands since the year 1850. Besides the annual sum of 9,800,000 florins, which for fourteen years amounts to 137,200,000 florins, there has been taken for the service of the following years,—

	Florins.	Cents.		Florins.	Cents.
1850	7,200,000		1858	20,755,637	28·5
1851	6,582,698	15·5	1859	3,800,000	
1852	4,700,000		1860	22,559,171	43
1853	4,769,399	34	1861	23,194,720	95
1854	10,644,140	97	1862	8,686,307	45
1855	14,547,850	52	1863	28,587,358	03
1856	19,531,700	23·5			
1857	31,858,421			207,417,405	36·5

To this must be added the sums paid by the East Indian budget to cover the deficit on those of the other Colonial possessions of the Netherlands. These items have not been carried to the account of the Home budget until the year 1862. They are as follows, extracted from the accounts of the Indian Finances:—

	Florins.	Cents.		Florins.	Cents.
1850	476,391	62·5	1860	918,953	20
1851	453,915	28·5	1861	975,022	93·5
1852	596,659	77·5	1862	1,525,926	87
1853	544 604	14	1863	2,634,716	
1854	942,176	03			
1855	701,241			13,164,720	
1856	707 859	43·5		107,417,405	
1857	726,277	36·5		237,200,000	
1858	1,025,985	22			
1859	935,000			357,782,134	

being an average of upwards of 2,000,000*l.* sterling per annum for the fourteen years.

It is evident from the inspection of the foregoing figures that the amount derived from those resources is very variable, and at the same time it is necessary to point out that while the indispensable expenses of the Indian Administration are increasing considerably, the culture system, under which these large profits are obtained, is receiving no corresponding development.

If the ordinary expenditure for the last fourteen years is examined in comparison with the ordinary receipts, it will be found that they have increased in nearly equal proportions, the difference being slightly favourably to the latter, namely, a little more than 10 per cent. on receipts, and a little less than the same per-centage on expenditure. During the same period an important article of consumption, namely,

bread, has been relieved from taxation by the abolition since 1855 of the multure tax, which in that year yielded a revenue of more than 4,000,000 florins, exceeding one-fifth of the whole amount of taxes on consumption. In the same year the tonnage dues on sea-going ships were also remitted. These had produced 598,427 florins. It is only within the last two years of the period under consideration that the ordinary receipts have reached the point at which they stood previously to the reductions mentioned above. The increase of population during these fourteen years has been in a proportion slightly greater than that of revenue, namely, 11 per cent.

If, however, the relative increase of income and expenditure be looked at from another point of view, it will present a less favourable aspect. During the period in question the interest of the national debt has diminished, as has been already shown, by more than 7,000,000 florins. It is manifest, therefore, that the other expenses of the country have increased and are increasing at a rate considerably more rapid than that of the annual revenue. Accordingly the conditions of the problem of rendering the finances of the Netherlands independent of the Indian supplies cannot be satisfied by merely filling up the gap of 10,000,000 florins at present existing between the ordinary expenses and receipts. Provision must further be made to cover the annually increasing demands of what Mr. Gladstone calls the optional expenditure of the State, should any events reduce the Indian surplus as low as 12,000,000 florins.

Reviewing now the condition of the tax-payer in the Netherlands, both in general and with reference to the two periods taken for comparison in this Report, and bringing it to the test of the Table No. 3, published in Mr. Barron's Report of March last, the ordinary State revenue for 1863 is found to be 5,527,647*l.*, or 1*l.* 12*s.* 4*d.* per head; profit on Colonies 3,362,895*l.*, or 19*s.* 1*d.* per head. Taxes raised by the State 4,936,310*l.*, 1*l.* 8*s.* 10¾*d.* per head. Taxation of all kinds, namely,—

	Florins.		£
State	58,074,238	=	4,936,310
Provincial	939,960	„	79,896
Communal	13,804,221	„	1,173,351
	72,819,419		6,189,557

or 1*l.* 16*s.* 2¾*d.* per head. Cost of Army and Navy 20,820,077 florins (1,769,706*l.*) 10*s.* 4¼*d.* per head. The capital of the funded debt, consisting as it does of funds at different rates of interest, may be omitted in this comparative statement, as the distribution of it per head of population at its nominal value gives an erroneous view of the result. The interest, equivalent to 2,457,203*l.*, gives 14*s.* 4½*d.* per head; and as there is no floating debt the figures immediately preceding represent the total annual charge of the debt.

The comparison of these results with the corresponding ones of the year 1850-51 gives, for the ordinary State Revenue per head 1*l.* 12*s.* 7½*d.*, profit on Colonies 9*s.* 4¾*d.* Taxes raised by the State 1*l.* 10*s.* As there are no data for estimating correctly the amount of local taxation, the average of taxation of all kinds can only be given approximately at 1*l.* 16*s.* 5½*d.* per head. Cost of Army and Navy 8*s.* 7¾*d.*, and for interest of debt 1*l.* per head. From this it would appear that taxation has kept pace as nearly as possible with the increase of population, the decreased charge for the interest of debt compensating for the increased expenditure for State and local purposes combined.

Besides the reason which I have before given for the selection of the year 1863 for showing the state of the finances of the Netherlands, there is another in the circumstance that important changes are taking place in the system, and coinciding pretty nearly with that epoch.

One item has to be struck out of the account of revenue, the Scheldt dues, which produced in the last complete year of perception 923,066 florins, while the sum paid for the redemption of these dues is applied from time to time to the reduction of the National Debt.

On the other hand, the amount expended on the railways now in process of construction at the charge of the State may be expected shortly to yield a return. 61,000,000 florins, including the sum voted for the service of the present financial year, have been appropriated to this object.

Since the 1st March, 1864, the State duty on fuel has been abolished, while that on spirits has been raised from 22 florins to 35 florins per vat (of 22 gallons), to compensate for the anticipated loss. The revenue returns as made up to the end

of November last show a receipt under these two heads, compared with that of the same period for 1863, as follows :—

	Eleven months of 1863.		Eleven months of 1864.	
	Florins.	Cents.	Florins.	Cents.
Spirits	5,741,226	83	7,899,793	12
Coals	1,342,173	32	541,239	36
Turf	1,412,046	33·5	1,328.169	

It must here be pointed out that the duty on turf is in a great measure paid in the year following that for which it is due.

Bills are now before the States-General having for their object—

1. A modification of the personal tax, which is expected to produce an increase of revenue to the extent of 2,500,000 florins.

2. A reform of the Stamp laws, from which a loss is anticipated.

3. A reform of the duties on registration of instruments; and

4. An alteration of the system of communal taxation, according to which all local taxes on articles of consumption are to be abolished, and the sources of income to meet the communal expenditure are restricted. It is also proposed in connection with this measure to cede to the communes one half of the receipts of the personal tax, and also a proportion of the spirit duties, which are to be further increased from 35 florins per vat, to which they were raised in March last, to 50 florins per vat. As the means by which the Minister of Finance designs to replace the deficiency likely to result from this change are only indicated by him in general terms as to be found in an increase of taxation on some articles of consumption, together with a readjustment of the Sugar Duties, which may be rendered more productive in consequence of the recent agreement entered into between Great Britain, France, Belgium, and the Netherlands, with respect to the drawback on this article, the particulars respecting them must be reserved for a future Report.

(Signed) WILLIAM R. WARD.

Hanover.

Report by Mr. Doria, Her Majesty's Secretary of Legation.

Hanover, January 20, 1865.

COAL being an article of such vast importance among the exports from England, I have considered that it might not be unprofitable to inquire into the state of coal mines in the kingdom of Hanover, and to make this inquiry the subject of my report for the last half-year, ascertaining, as far as possible, what amount of coal finds its way into this country, apart from the Zollverein, from England.

Although Hanover is not a manufacturing country, its inhabitants being principally employed in agriculture, and although possessing vast moor lands and wooded districts, from which a large supply of fuel is obtained, nevertheless the supply of coals produced from its own mines is not equal to the demand. The gradual increase in the consumption of coal may be seen from the annexed Table No. 1, which shows that the whole consumption in the three years 1861–63 has increased more than half a million of centners, and that the quantity imported has increased far more than two millions of centners from the year 1860 to 1863.

(No. 1.)—TABLE showing the Increase in the Consumption of Coal in the Kingdom of Hanover for the years 1860 to 1863 inclusive.

	1860.	1861.	1862.	1863.
	Centners.	Centners.	Centners.	Centners.
Hanoverian coal ..	..	6,765,013	6,444,617	6,345,449
Foreign imported coal ..	3,109,355	4,679,420	6,281,053	5,595,224
Total	3,109,355	11,444,433	12,725,660	11,940,673

N.B.—The centner equals 100 lbs. weight.

Coal, moreover, is only now becoming generally used for house fuel, and it is supposed that there will be a decrease in the value of moor land in consequence, unless measures are adopted to bring them into cultivation.

Charcoal burning is nearly given up. The great furnaces for smelting lead, copper and silver in the Hartz, although the whole of that district is well wooded with fir trees, now use coke in preference.

Coal is not found in the Northern German plain; it appears in the mountains of Hanover and in their immediate vicinity.

The Hartz, the principal mountain district of Hanover, has coal only in the Southern Province of Hohnstein, near Ilfeld. The produce of these mines is very small, only about 200,000 centners per annum.

According to scientific research, a great coal field, like that of Zwickau, in Saxony, is supposed to exist in the plain south of Ilfeld. It is not the intention of the Hanoverian Government to commence any works there, the States being of opinion that it is unadvisable for the Government to enter upon undertakings of a speculative or manufacturing character.

The most considerable quantity of Hanoverian coal is found some miles south of the capital, in the mountains called Deister and Osterwald, also at Suntel, in the neighbourhood of Osnabrück.

The existing mines lie within an area bounded on the extreme west by Osnabrück, and terminating towards the south near the towns of Hameln and Coppenbrügge; the greater number of the mines being found between the town of Minden on the Weser and Hanover; their names, the quantity of coal produced, and the number of people employed in them, may be seen from the annexed Table No. 2.

Total of Brown-coal Mines	99,177	46	8,959	108,314	28	7,526	92,658	31	6,186

These mines produce three different kinds of coal, viz., anthracite, in the neighbourhood of Osnabrück (Piesburg); brown coal, or lignite, south of Osterwald, near a place called Wallensen, and near Minden on the Weser; thirdly, bituminous coal.

The real coal formation exists only near Ilfeld, and in the vicinity of Osnabrück. The bituminous coal is the most abundant.

The whole produce of the mines amounted in the year 1863, to 6,438,107 centners, of which 92,658 centners were brown coal. The quantity of anthracite equalled 713,522 centners. By deducting these two sums from the whole quantity of coal produced, 564,927 centners remain, which figures represent the number of centners of bituminous coal obtained in the same year.

On the Osterwald, five layers (strata) of coal exist, only one in the district of the Deister and Suntel. The thickness of the strata varies from 8 inches pure coal to 30 inches, on the average it is 15·17 inches; 8 inches of pure coal without any mixture of slate or clay is considered worth working. The amount of heat produced by this coal varies (bituminous coal is only referred to). Generally the value of this coal is less than that of English or of coal from Westphalia.

Mining is carried on by Government and also by private undertaking; the preceding Table (No. 2) shows the particulars.

With the exception of the mines of Osnabruck and those in the county (territory) of Hohnstein, coal-mines are not subjected to a royalty, called in German "regal." They generally belong to the owners of the surface of the soil, who can work the mines without paying any tax to Government.

The whole amount of coal produced (brown coal included) has been, in 1861, 6,763,063 centners; in 1862, 6,444,609 centners; in 1863, 6,345,499 centners: of which quantity, in 1861, 2,197,994 centners; in 1862, 2,391,858 centners; in 1863, 2,598,569 centners, belonged to Government; and in 1861, 4,567,019 centners; in 1862, 4,052,759 centners; in 1863, 3,746,882 centners, belonged to private undertakings.

By comparing these figures it appears —

1st. The produce of private was formerly greater than the produce of Government mines.

2ndly. That there was a decrease of 419,564 centners in the whole quantity produced.

3rdly. That the private mines decreased in the quantity produced 820,137 centners, while the produce of the Government mines had an increase of 400,573 centners.

The reason of this diminution on the whole produce is not on account of a less demand for coal or of a less consumption, but arises from the increase in the quantity of foreign coal imported, particularly from Westphalia, Obernkirchen, and Stadthagen*—where the expenses of mining are much less, owing to the strata of coal being thicker, and whence coals are carried by the railroad at 1 silver pfenning per centner per German mile.

The diminution which has taken place in the quantity of coal obtained formerly from private mines is owing to their unfavourable position, and also to the abandonment of a mine near Bantorf (Deister), which in 1861 produced 357,940 centners, while the increased quantity derived from Government mines is attributable to the facility of transport to Hanover, to the vicinity of the mines to the railway (Osterwald), and lastly, to the consumption of coal by the great iron works, Georg-Marien Huter, near Osnabruck, the most considerable in the kingdom, which produce about 15,000 centners of iron per day.

The whole amount of coal, as paid for at the mouth of the pit, valued—

	Thalers.
In 1863	711,619
1862	745,758
1861	786,897

The price of coal has since 1858 been subject to great fluctuation. It varied from 4 thalers 6 groschen in 1858, to 2 thalers 4 groschen in 1861, a variation of nearly half the value.

In 1864, coal obtained a more ready sale, owing to the iron works in Westphalia and on the Rhine being in a more active and flourishing condition. German coal has also found a market in the Netherlands. The Hanoverians also find the superiority in quality of the Westphalian coal is not so great as was imagined, and greater care is taken to furnish a purer coal from their own mines. The coal is even washed: the process was described to me in the following manner:—

The coal is placed in large square boxes perforated at the bottom; it is then submitted to the action of water falling upon it, which carries away much extraneous substance; the stones remain at the bottom, and the coal is taken from the top.

So much extra labour must necessarily detract from the profit upon the coal.

The Government returns give a net income derived from coal-mines for the last three years for the following amount:—

	Thalers.
1860–61	34,048
1861–62	27,800
1862–63	44,297

The under-mentioned figures show the amount expected to be realized for the next three succeeding years:—

	Thalers.
1863–64	30,998
1864–65	40,204
1865–66	51,850

* Two mines in the Principality of Schaumburg-Lippe and the Hessian territory of Schaumburg.

Coal is principally imported from England, Prussia, and Kurhessen (see annexed Table):—

(Signed) WM DORIA.

Saxony.

Report by Mr. Barnard, Her Majesty's Secretary of Legation, on the Saxon Industry in which Mechanical Power is Employed.

Yarn spun from combed Wool.

January 1865.

Spinning yarn from combed wool has not been long introduced into Saxon industry. The oldest and first mill of this branch was built in 1829, the second in 1834.

These two establishments employ at present above 24,000 spindles, which is nearly a quarter of those in all other mills. Between 1834 and 1845 eight new mills were constructed, having in all 29,000 spindles. In 1849 a mill was built with 7,530 spindles. Between 1845 and 1852 only six were built, with 26,500 spindles. From 1853 to 1860 there were eighteen new mills built, with 26,500 spindles, fourteen of which are in the Saxon Hills (Voigtland). They were all, however, worked by manual labour.

The introduction of mechanical power into this branch is of a more recent date, and has now entirely supplanted manual labour, which is now not even carried on in Houses of Correction.

The first mechanical combing-mill in Saxony was built in 1843 with Schlumberg's machinery, the second in 1850, and since that period seventeen new mills have followed. Of these nineteen establishments only five may be said to spin only worsted yarn; the remaining fourteen spin cotton and worsted. One mechanical combing-mill is close to the frontier, but not in Saxony. The fifteen mills employ upwards of 75,500 fine spindles—on an average 500 to each. The nineteen establishments, without carding machinery (combing-room) have together only 29,120 spindles—average 1.532 to each.

The distribution of the spinning and carding-mills is as follows :—

Districts.	Mills.	Hand-mule Spindles.	Self-acting Spindles.	Water Spindles.	Total.	Combing Mills.	Machinery.		Total.
							French.	English.	
Chemnitz	3	12,048	674	536	13,258	2	20	..	20
Zwickau	5	19,160	1,000	5,964	26,124	5	39	4	43
Plauen	21	28,200	..	168	38,368	6	25	10	35
Bosna	2	11,440	190	5,596	17,226	2	29	9	38
Rochlitz	2	3,474	..	3,572	7,046	2	..	2	2
Dresden	1	2,600	..	..	2,600	2	9	17	26
	34	86,922	1,864	15,836	104,622	19	122	42	164

The smallest combing-mill has 910, the largest 12,152 fine spindles. The average of each is 3,077. Of the mule spinning-jennies there were only five self-actors, with 190, 334, 440, 500, and 500 spindles.

Of the hand mule-machines—

7 had from 134 to 140 spindles.
80 „ 160 180 „
194 „ 190 200 „
66 had from 208 to 230 spindles.
53 „ 240 „
14 „ 260 to 270 „

Of the machines worked by water-power—

36 had 168 spindles.
37 had from 100 to 132 spindles.
14 „ 180 224 „

Fourteen of the spinning establishments, with 37,644 spindles, were worked by steam alone; four establishments, with 11,802 spindles, by water alone; and sixteen establishments, with 55,176 spindles, by water and steam.

Twenty-four thousand spindles produced only knitting zephyr and other yarns, assisted by the necessary twisting-machines.

Eighty thousand spindles spun yarn for weaving to No. 20 downwards and to No. 80 upwards, but principally from No. 30 to No. 50.

The total weekly produce exceeds 60,000 lbs., and therefore yearly 3,000,000 lbs., worth 5,000,000 dollars (750,000*l.*)

The capital invested, at an earlier period, in the motive-power and machinery of this branch of industry may be computed at 1,320,000 dollars (198,000*l.*)

At present a combing-yarn mill, without combing-room, would cost 9 dollars (1*l.* 7*s.*) per spindle, including motive power and transmission; but with combing-room at least 15 dollars (2*l.* 5*s.*), to which must be added the building, management, and other capital.

In the year 1861 not above 800 persons were employed in mechanical yarn-combing, and 1,700 in spinning. The whole branch has also 2,500 workmen, of which not more than 500 are adults. The number of hands now employed, when compared with the number of spindles, is not so large as before the introduction of mechanical combing.

Carded Yarn Mills.

A much older branch of industry in Saxony is the spinning carded yarn, so necessary for making cloth, together with the greatly-increasing Vigogne spinning (mixture of cotton and wool), and called in England and Scotland (to which countries much is exported from Saxony) Angola yarn.

In 1846 there were 172 carded yarn mills, with 78,953 spindles, in Saxony, equal to scarcely 500 to each mill.

In 1861 there were 332 mills, with 303,397 spindles, equal to 900 to each mill.

Of the present existing mills—

31	were built between	1814	and 1830	50	were built between	1846	and 1850
42	„	1831	1840	47	„	1851	1855
36	„	1841	1845	126	„	1856	1860

which proves that many of those existing in 1846 must either have ceased to work, or to have been rebuilt.

The very great increase of the Vigogne spinning has principally taken place since 1856, for at present there are working—

161	mills, with	487	assortments, and	121,579	spindles, pure woollen, carded yarns.
125	„	341	„	124,488	„ Vigogne yarns.
46	„	148	„	57,330	„ mixture of both.

The Vigogne spinning is particularly carried on in Zwickau district, viz., in Crimmitschau, Werdau, &c., &c., as also in part of Voigtland.

In the following mills only pure-carding yarn is spun for cloth and cloth-like stuffs:—

67	with 60,885	spindles	in Werdau District.	16	with 9,360	spindles	in Kirchberg District.
59	„ 67,400	„	Crimmitschau „	11	„ 20,730	„	Grossenhain „
42	„ 45,303	„	Wöbeln „	12	„ 7,810	„	Auerbach „
21	„ 13,130	„	Reichenbach „	7	„ 5,170	„	Treuen „
21	„ 12,775	„	Lengenfeld „	5	„ 11,928	„	Rochlitz „
20	„ 12,716	„	Chemnitz „				

The remainder is distributed in different parts of the Kingdom.

The old method pursued in carded-yarn mills, viz., with scribblers, breakers, and carding-machines, has nearly been superseded by new improvements, viz., scribblers, with one or two peigneurs; also by spinning-jennies on the cylinder system.

The old method of Vigogne spinning has entirely ceased, spinning-jennies becoming much more in use.

In 1861, there were of them—

78	machines with	120	spindles.	77	machines with	204–225	spindles.
14	„	132–150	„	667	„	240	„
43	„	160	„	25	„	250–280	„
176	„	161–180	„	70	„	300	„
181	„	192–200	„	1	„	360	„

A complete set of slubbing-cards, with the necessary scribblers, &c., was required for different numbers of spinning-jennies, viz.:—Combing-machines, 11 in number, required 120 to 360; slubbing-cards, 965, of which 692 were with 1 peigneur, 273 with 2 peigneurs; 558 narrow (36″); 221 mean (36″ to 42″); 196

broad, exceeding 52″. These required 60 to 670. At present, 240 to 420 is the most usual number. The total average of an assortment is 311 spindles; for spinning only carded yarn, 250 spindles; for spinning Vigogne, 365 spindles; for mixed spinning, 387 spindles. Spinning done with own loom, but for wages, 66 spindles, with 140 assortments, and 41,109 spindles; on own account, 225 spindles with 720 assortments, and 228,198 spindles. Both the above occasionally, 41 spindles with 116 assortments, and 34,090 spindles.

The average where own loom is worked for wages, 600 spindles; where working on own account, 1,000.

The largest spinning establishments in the kingdom had—

6,720 spinning jennies.	5,100 spinning jennies.
6,042 „	5,020 „
5,800 „	

Besides these, there were—

3 with more than 3,000 spindles.	108 with from 601 to 1,000 spindles.
6 with from 2,501 to 3,000 spindles.	23 „ 481 600 „
8 „ 2,001 2,500 „	60 „ 361 480 „
10 „ 1,501 2,000 „	49 „ 121 360 „
46 „ 1,001 1,500 „	5 with less than 121 spindles.

The pure carded yarn-spinning mills are generally the smallest (755 spindles). For Vigogne spinning the average 1,000 spindles; for mixed spinning 1,240.

As regards motive-power, the following shows where and how the different machines worked:—

Motive Power.	Circle Zwickau.		Circle Leipzig.		Circle Dresden.		Circle Budissin.		Total.	
	Mills.	Spindles.	Mills.	Spindles.	Mills.	Spindles.	Mills.	Spindles.	Mills.	Spindles.
Manual labour	..	..	1	180	..	..	..	..	1	180
Levers	1	60	3	1,410	..	..	..	..	4	1,470
Water-wheels { turbines ...	2	2,760	..	..	..	..	..	..	2	2,760
Water-wheels { vertical ..	79	43,816	38	42,653	8	3,200	18	7,715	143	97,384
Steam and water, including 9 turbines	28	35,520	2	9,908	4	9,390	5	4,100	39	58,918
Steam alone	128	123,745	6	6,260	6	10,580	3	2,100	143	142,685
	238	205,901	50	60,411	18	23,170	26	13,915	332	303,397

It is extremely difficult to give a correct account of the real extent of motive-power, as there exist many small establishments were it is partially employed, but these establishments are dispersed in different parts of the kingdom, and are not easily controlled, as they occupy themselves partly with dyeing: and there are cases where the same water works on wheels for spinning and for grinding corn, &c.

The capital calculated to be invested in all the motive-power and machinery employed in spinning carded yarn and Vigogne amounts to 2,878,000 dollars (35,200*l.*)

The quantity of carded yarn yearly produced may be reckoned at 10,000,000 lbs., that of Vigogne at 6,000,000lbs, and together worth 15,000,000 dollars (2,250,000*l.*) Carded yarn of the sorts most in request fetches 1 dollar (3*s.*) per lb.; Vigogne, 22 groschen (2*s.* 2¼*d.*)

The number of hands employed may be reckoned at one workman to 40 or 50 spindles, giving a total of circa 10,000 workmen, one-quarter of whom are adults.

Flax Spinning.

At the end of 1861, Saxony had only three mechanical flax-spinning establishments, with 10,786 spindles for flax and tow.

The first of these was introduced in 1846. The total weekly produce was 30,000 lbs. of flax and tow yarn. One of these mills was worked by steam, and one by water (turbines).

The capital invested in these mills for machinery may be computed at 320,000 dollars (48,000*l.*)

Some new buildings for spinning flax were in progress, by which this branch of industry in Saxony would increase.

Spinning Linen Thread.

The following Table gives a specification of the different establishments in Saxony, and of the different sorts of thread produced :—

	53 : 37,800				27 : 9,716				80 : 47,516			

N.B.—Dependent establishments are those in which dressing, bleaching, and dyeing are carried on, and which prepare stuffs sent by weavers and stocking makers. Independent establishments receive stuffs direct from the manufactories.

The independent thread mills are, with the exception of two, which belong to weaving establishments, all connected with spinning mills, and have the greatest number of spindles.

Of the 47,516 spindles, there are 39,662 which spin cotton thread. Among these 9,500 make thread for knitting, sewing, and tambour-work, &c. ; the rest weavers' thread.

The carded yarn-spinning mills produce with 2,672 spindles almost entirely weavers' thread. The worsted yarn threads are generally zephyr yarn ; the linen thread is generally sewing and packthread.

At the end of 1861 there was but one establishment for spinning silk, at Leipsic, connected with dyeing, and producing yearly about 5,000 lbs. of silk thread.

In 1861 there were 27 mills with bobbin-machines, in which 136 workmen were employed with 1,420 bobbin-machines and 25 spool-machines. These were worked partly by steam, by water power, and by hand.

In this small branch of business a capital of nearly 40,000 dollars (12,000*l.*) was invested.

Mechanical Weaving for Cloth, Stockings, &c.

This branch of industry is increasing in Saxony, but it only commenced in 1847, at which period the first looms were constructed for making Orleans; in 1848 for velvets; and in 1849 the first mechanical looms both for cloth and cassinets; and in 1850 for flannel, damask for furniture, &c. From this period great progress has been made.

In 1852 there were 17 establishments with mechanical looms. Between 1854 and 1856 they were increased by 12; in 1858 by 18; and between 1858 and 1861 by 34; so that at present there are 81 such establishments in Saxony.

Table No. 1 (annexed) gives the number of the present mechanical looms, together with the uses made of them. The total capital invested in the machinery of mechanical weaving is computed at 222,000 dollars (33,300*l.*); for motive-power and transmissions 721,000 dollars (103,150*l.*); for looms, &c., 943,000 dollars (141,450*l.*) The price of a narrow loom is therefore from 150 to 180 dollars (22*l.* to 26*l.* 10*s.*) The price of the broadest loom for cloth is from 400 to 500 dollars (60*l.* to 75*l.*)

The stocking-weaving has been subject to the same changes which have been felt in other branches, by the introduction of mechanical power.

The invention of English circular frames obliged the Saxon industry to adopt the system, so that between 1852 and 1861 between 40 and 50 establishments employed them.

Among the machines for weaving stockings, those at present most in use are English circular frames with narrow pipes, generally connected by six, eight, or twelve heads in one loom.

French circular frames, with only one wide cylindrical pipe, and broad mechanical looms, of new English construction, for borders, &c.

None of these machines absolutely require mechanical motive-power, being very light, and therefore easily worked by manual labour, in which case many of their advantages are attained, more particularly that of a larger product; and for this reason they are much in use in Saxony.

The number of mechanical stocking-weaving establishments in Saxony in the year 1861 amounted to—

	Mills.	English Frames.	Circular Frames, Heads.	French Frames.	Broad Looms.	Sewing Machines.
By steam	8	318	2,487	75	26	289
„ steam and water	1	34	204	..	..	9
„ water alone	3	14	70	1	..	13
	12	366	2,761	76	26	311
„ manual labour	34	175	1,037	61	4	84
	46	541	3,798	137	30	395

Of the 3,798 heads of the English circular frames, 16 were of the newest construction, with two, three, and four systems; the rest were all of one system.

Of the 541 English circular frames, there were 7 with only 1 head; 3 with 2; 1 with 3; 1 with 4; 266 with 6; 227 with 8; 14 with 9; 20 with 12. Of broad looms, 7 were 12 head: 4 were 8, for borders; 3 were broad-ribbed hose frames; 4 were narrowing frames. The largest establishment worked above 1,600 English and 60 French circular frames.

Sewing-machines, although of inferior importance, are here mentioned as being used for sewing the stockings together.

The capital invested in the above branches of industry may be computed at 54,000 dollars (3,600*l.*) for motive-power; 214,000 dollars (32,100*l.*) for looms and spool machinery. This gives the price of an English circular frame (single system) to be 35 to 40 dollars (5*l.* 5*s.* to 6*l.*); a French circular frame, 150 to 200 dollars (22*l.* to 30*l.*); a broad mechanical rib frame, with appurtenances, 1,000 to 1,600 dollars (150*l.* to 240*l.*)

The activity in construction of machinery in Saxony and the increase of importation of English weaving-looms in 1862 proves the progress of mechanical weaving and of stocking looms in the country.

Mechanical Embroidery.

The first machinery for this branch was introduced into Saxony in 1857, from Switzerland. Since that period a great increase has taken place, and large quantities of new and improved machinery have been constructed in Saxony:—

	End of 1861.		March 1863.	
	Establishments.	Machines.	Establishments.	Machines.
In Plauen	4	42	7	55
Adorf	..	..	1	25
Eibenstock	2	9	3	9
Schneeberg	1	1	1	2
Auerbach	..	..	1	1
Markhenkirchen	..	..	1	1
Schöneck	..	..	1	1
Leipzig	..	..	1	1
	7	52	16	97

The Swiss machinery contained only one row of pins. The improved machinery, constructed in Saxony, soon introduced two rows—one above the other; and later, three rows.

The breadth of the looms is from 14 feet to 15 feet; each row contains from 100 pins to 150 pins. The total, therefore, of active pins amounted in 1861 to between 10,000 and 12,000, and in March 1863 to between 20,000 and 25,000 pins.

All of the above machinery is worked by manual labour.

The price of a double machine is at present from 800 to 850 dollars (from 120*l.* to 128*l.*); of a triple machine, 11,000 dollars (165*l.*)

The capital invested is computed at from 80,000 to 90,000 dollars (from 12,000*l.* to 13,500*l.*)

Dressing, Dyeing, and Printing Woven Articles.

This branch of industry is naturally greatly connected with all that is produced by the loom, and has made enormous progress since 1846.

At present scarcely any trace of the old system is left, and the whole business is now conducted on new and improved principles.

Above half of the present establishments have been built since 1850, and 166 between 1852 and 1861.

Table No. 2 gives a full proof of the great value and importance of the branch of dressing cloths, stuffs, &c.

Of the independent dressing establishments, 83 were employed in making cloth, 23 with different branches of weaving, and 15 with stocking-making.

Of the dependent, there were 49 in rooms hired in spinning establishments, mills, &c., and entitled to make use of the motive power there. There were 12 which had let part of their premises and part of their motive power for other purposes; 16 carried on at the same time bleaching; 23 carried on at the same time dyeing; and 2, printing.

The motive power consisted in—

	Independent.	Dependent.
Steam	89	50
Water	68	38
Water and steam	4	15
Horse-power	32	—
Manual labour	40	18

There are at present at least 3,000 persons employed.

The establishments for printing cotton stuffs appear to be no longer so profitable as formerly, and meet with less success than they did thirty years ago.

On the hand, the printing of woollen stuffs has greatly increased.

Russia.

Report by Mr. Lumley, Her Majesty's Secretary of Embassy, on the Trade and Manufacture of Cotton in Russia.

THE manufacture of cotton in Russia is an industry of considerable importance, and, although the interests engaged in it cannot be compared with the vast amount of capital employed in that trade in other countries and especially in England, it has made such progress under the prohibitive and protective duty by which it is fostered that it has been enabled to supply to a considerable extent the wants of the population of this great Empire, and to afford at the same time satisfactory results to those who have employed their capital in the speculation.

As, owing to the nature of the climate and the peculiar condition of labour in Russia, the circumstances under which this manufacture is carried on differ in certain respects from those under which it exists in other countries, some information respecting it may not be devoid of interest.

Although at various times attempts at cotton spinning and weaving had been made on a small scale in different parts of Russia as early as 1812, the trade can scarcely be said to have existed till 1822, when a considerable impulse was given to it by the protection afforded to native industry under the Tariff of that year.

By that Tariff the importation of every description of cotton prints was prohibited, and a duty was imposed on white and dyed cotton tissues equal to from 60 per cent. to 100 per cent. of their value.

The consumption of cotton goods of every description was then greatly on the increase among all classes of the population of Russia, and the encouragement given by this prohibitory Tariff led naturally to the establishment of cotton spinning and weaving mills, and to the investment of a large amount of capital in those speculations, to the detriment of other branches of national industry.

This manufacture was still further stimulated by various measures adopted in 1833 by Count Cancrine, then Minister of Finance, at whose instigation several wealthy noblemen were induced to set up cotton factories and other industrial establishments in different parts of the Empire.

The progress of this new industry may be traced in the following table showing the importation during triennial periods of cotton into Russia.

The importation of raw cotton and cotton yarn into Russia from 182[illegible] inclusive, was as follows :—

	Importation of			Importation of	
	Raw Cotton.	Cotton Yarn.		Raw Cotton.	Cotton Yarn.
	Poods of 36 lbs. English.	Poods.		Poods of 36 lbs. English.	Poods.
In 1824–1826 ..	74,268	337,101	In 1839–1841 ..	355,774	542,125
1827–1829 ..	98,180	440,582	1842–1844 ..	524,511	592,193
1830–1832 ..	115,996	533,690	1845–1847 ..	780,149	504,336
1833–1835 ..	171,189	549,399	1848–1850 ..	1,329,031	281,520
1836–1838 ..	282,799	626,713			

The increase in the importation of raw cotton and the diminution in the importation of cotton yarn shows the progress of the Russian cotton manufacture. This progress is still more evident in the ensuing years .—

	Importation of	
	Raw Cotton.	Cotton Yarn.
	Poods.	Poods.
In 1851	60,7[illegible]	157,931
1852	48[illegible]46	112,733
1853	1,814,282	83,548

From this Table it will be seen that, while the importation of raw cotton

increased in the proportion of 1 to 24, that of cotton yarn, after having increased threefold with the first 15 years, fell to a third of what it had been in the period from 1824 to [illegible], and to a fifth of what it had reported in the period from 1836 to 1838.

In the period from 1821 to 1826 the importation of cotton was so insignificant that it was chiefly employed for wadding and other purposes. At that time there was only one spinning-mill of any importance in the country—a model mill established by the Russian Government at Alexandrowsky, near St. Petersburgh, which consumed about 20,000 poods of raw cotton. The entire cotton manufacture of the country depended, therefore, on cotton yarn imported from England.

During the period from 1848 to 1850 the average importation of raw cotton per annum amounted to 1,329,676 poods, which, deducting 15 per cent. for loss in spinning and for partial employment for other purposes, gives 1,129,676 poods of cotton yarn. Add to this 280,520 poods of cotton yarn imported during that period, and we have a total of 1,371,196 poods of cotton yarn employed in the manufacture of cotton goods in Russia. So that in a period of 27 years this industry may be said to have quadrupled its production.

But the cotton-spinning industry, though protected from the commencement of its existence by a heavy duty on foreign yarn of 5 silver roubles per pood (15*s.* per 36 pounds English), only began to develope itself in 1830, and did not receive its greatest impulse till the year 1842. The cotton-spinners had to contend not only with obstacles incident to all new undertakings, but in particular with the difficulty of obtaining the requisite machinery, the exportation of which from England was at that time prohibited.

By the abrogation of that prohibition, the principal obstacle which interfered with the progress of cotton-spinning in Russia was removed, and at the same time the cotton-spinners had succeeded, by their representations during the commercial crisis of 1841–42 in inducing the Russian Government to increase the protective duty on foreign cotton-yarn to 6 silver roubles 50 copecks per pood—a duty which, though intended merely as temporary relief, was retained till the year 1850.

A protective duty of this amount on cotton-twist of moderate fineness, Nos. 20 to 40, was equal to 60 per cent. of its value, and it gave such an impetus to the trade that the spinning-mills were enabled in the period from 1848 to 1850 to supply more than 80 per cent of the amount of cotton-yarn consumed in the manufactures of the country.

The following Table, showing the duties levied on raw cotton, white cotton-yarn, and dyed cotton-yarn in the different tariffs established in Russia from the [illegible] of 1724, has been obligingly communicated to me.

—Duties levied on importation of Raw Cotton and Cotton Yarn in the Tariffs of Russia since 1724.

Showing an increase, in a period of seven years, of 157·6 per cent.

From this Table, which I have drawn up from the official returns published by the Russian Government, it will be seen that the importation of raw cotton steadily increased till the period of stagnation in trade brought about by the Crimean war, when it fell from 1,814,208 poods in 1853 to 1,323,646 poods in 1855. At the conclusion of the war in 1856 it rose to 2,024,646 poods, and in 1859 it reached the highest amount it has ever attained in this country, of 2,794,054 poods. And here it may be of interest to remark, with reference to the prosecution of trade during the Crimean war, with what success Russia succeeded, by the aid of Prussia, in neutralising the effect of the blockade of the Baltic ports. On examining the first series of figures given in this Table it will be seen that the importation of raw cotton into Russia from Great Britain in the year 1853 amounted to 1,814,282 poods; from the United States, 475,051; from Prussia, 75,029; and from other countries 65,029 poods; whereas in 1855 the importation of raw cotton from Great Britain fell to 17,006 poods, that from the United States to 17,017, while that carried on through Prussia increased to the enormous amount of 1,265,512 poods; the diminution in the supply of cotton during the strictest period of the blockade being less than one-fourth of the amount imported into Russia the year before the war broke out. During the same period of seven years, from 1853 to 1859 inclusive, the importation of cotton yarn, which had decreased from 83,548 in 1853 to 65,548 in 1855, rose at the conclusion of the war to 118,000 in 1856, in 1857 reached 311,883 poods (approaching the greatest amount imported in 1826, when Russia almost entirely depended on England for cotton yarn), and then gradually fell to 143,936 in 1859.

On an average calculation, one pood, or 36lbs. English, of cotton is consumed per spindle in Russia. According to M. Tegoborski, writing in 1853, Russia at that time held the fifth place among the cotton manufacturing countries of the world. Taking the average importation into Russia of cotton, raw and spun, for the period from 1848 to 1850, at 1,371,196 poods, or, including the produce of the cotton manufactories in Poland at 1,420,000 poods as the amount of cotton manufactured in the country, M. Tegoborski makes the following calculations:—

The value of cotton goods imported into Russia during that period being 3,857,000 silver roubles, this at 60 silver roubles per pood, would give 64,283 poods as the amount of manufactured goods imported into the country.

The average value of the exportation to Asia of Russian cotton manufactures during that period was 2,370,000 silver roubles, or, counting the value of the pood at 40 silver roubles, 59,265 poods; for as Russia imports only fine qualities of goods, and exports her own coarse manufactures, this calculation requires the above difference in the value of a pood of cotton goods imported or exported. Thus, as the importation and exportation are nearly balanced, there remains for interior or home consumption 1,420,000 poods to be divided between 65,500,000 of inhabitants, which would give only 0·87 lbs. Russ per inhabitant.

The value of the native manufactures being 56,000,000, and the excess of the importation being placed at 1,487,000 silver roubles, the total value of cotton goods consumed in Russia would be 57,487,000 silver roubles, or 88 copecks per inhabitant.

In France the consumption of cotton at that period by a population of 35,500,000 was 3·07 lbs. Russ per head, or a value of 3 roubles 8 copecks per head.

In England, the consumption of 26,500,000 of inhabitants was 8lbs. Russ per head or about 7 silver roubles 34 copecks per head.

In Austria, 36,500,000 consume at the rate of 1.63 lbs. Russ per head, value 1 silver rouble 63 copecks per head.

In the Zollverein, a population of 30,000,000 consumed 3.11lbs. or 3 silver roubles 11 copecks per head.

The ratio which the consumption of cotton goods produced in Russia bears to the consumption of cotton goods produced and consumed in other countries is as follows:—

Compared with Austria as 10 to 10·6; Zollverein, as 10 to 18·5; France, 10 to 22; England, 10 to 86.

With regard to the total amount of cotton goods consumed, the comparison between Russia and other countries is as follows;—

Compared with Austria, as 10 to 18; France, as 10 to 35; Zollverein, 10 to 35·3; England, 10 to 83.

It appears, therefore, from the above figures that notwithstanding the rapid progress the cotton manufacture has made in Russia during the last thirty years, it would be necessary to double its production of cotton goods in order to attain the

relative consumption of Austria, the country which is the lowest in the comparative table given above. It is evident that this does not depend solely on the progress of the cotton industry in the country, but still more on the well-being of the lower classes, as well as on their tastes and habits; nevertheless, it is certain that Russian cotton goods, although they have considerably diminished in price, cannot be sold cheap enough to encourage their consumption.

The difference in price in comparison with that of cotton goods of other countries, and especially those of British manufacture, is from 35 per cent. to 40 per cent., while for some description of goods it is equal to 60 per cent. and more.

A proof of this is to be found in the fact that the importation of cotton goods of foreign manufacture amounted to 3,000,000 or 4,000,000 silver roubles a-year, notwithstanding the almost prohibitive duties imposed on cotton goods of European manufacture, which on some articles is equal to 60, 100, and even 200 per cent.

The following calculation of the loss incurred by the consumers of cotton goods manufactured in Russia is also given by M. Tegoborski.

In a period of twenty-seven years from 1824 to 1850, Russia imported 11,195,694 poods; this, when spun, produced, with a deduction of 15 per cent., 9,546,340 poods; cotton yarn, 13,222,675 poods; total, 22,739,015 poods; which, at the rate of 40 silver roubles per pood, represents a value of 909,560,600 silver roubles. It is a fact that in the first twelve or fifteen years Russian cotton goods were from 60 per cent. to 100 per cent. dearer than English cotton goods of the same description, and it may be assumed without exaggeration, that for the series of twenty-seven years above-mentioned, the difference in price was on an average 50 per cent. dearer; that is to say, on the amount of 909,560,000 silver roubles, a sacrifice of 454,780,300 silver roubles, or about 17,000,000 silver roubles per annum; and although it cannot be said that the whole of this sum would have been saved to the consumer, if foreign goods had replaced those of Russian manufacture, since foreign goods must have paid duty on entry, this saving would at all events have been divided between the Russian Treasury and the consumer.

I am indebted to an English gentleman connected with one of the principal cotton mills at St. Petersburgh for the following information respecting the amount of capital employed in the cotton manufacture of Russia as well as the condition of the cotton mills of St. Petersburgh and Moscow in 1863. Taking the number of spindles in Russia at 1,750,000, this would represent a capital of 35,000,000 roubles (about 7,000,000*l.*), *i.e.*, at the rate of 12 silver roubles per spindle, and at the rate of 8 roubles for working capital, say material, &c.

At the present rate, however, 8 silver roubles would be insufficient for the purpose, the above calculation being based only on the normal state of the cotton market.

The amount of capital employed in looms was estimated by the same authority as follows:—

	Roubles.
Capital employed in spindles	35,000,000
„ in looms	15,000,000
Total	50,000,000

14,000 power looms
50,000 hand looms } .. Capital, 15,000,000 roubles, equal to 2,143,285*l.*

For some time previous to the outbreak of the American civil war, the cotton mills of Russia were no longer making the brilliant profits of former years; the demand for cotton goods having been checked by the unsettled state of the country consequent on the proposed emancipation of the serfs, though even in 1859 and 1860 some of the mills gave very handsome dividends. In these exceptional cases, however, the reason might generally be traced to good fortune in the purchases of cotton.

Many of the mills at St. Petersburgh, and nearly all in the district of Moscow, were in the habit of working day and night; but just before the commencement of the American war night-work was generally abandoned.

The inland markets being overstocked with twist and calico, the period of forced reduced production has had a salutary effect in this country. Cotton-spinning has been a profitable enterprise in Russia for many years, owing to the high duty on foreign twist; but the development of the trade was too rapid. Thirty years ago there were less than 100,000 spindles in the country, where they are now nearly 2,000,000.

Several of the St. Petersburgh mills are worked with British and foreign capital, those inland are chiefly the property of Russians, the machinery employed is almost exclusively of English manufacture, and $\frac{9}{10}$ths of the engines are of English make. The overseers are exclusively English, and in that capacity about 450 are engaged.

The practice of working from twenty to twenty-four hours per diem was very general, and many of the mills at St. Petersburgh adopted this system until the crisis produced by the American war.

The power looms, of which there are about 14,000, suffice to weave up about one-half of the twist spun, which may be estimated at 2,000,000 of poods (72,000,000 lbs. English), to weave the balance there is employment for 50,000 hand looms and 60,000 weavers if they worked throughout the year, but during the summer months many are engaged in the field; in winter, however, labour is abundant, and the weavers work at so low a rate that they compete with the power looms, but the cloth they produce is uneven and of an inferior quality.

In and near St. Petersburgh there are four considerable bleaching and printing factories, but the principal establishments of this kind are at Moscow, Shooga and Ivanowna. The printed and coloured goods are disposed of in large quantities at the fairs of Nijni Novgorod, Isbit, &c., for home consumption, and for exportation to Central Asia.

I am indebted to the same source for the accompanying Tables, showing the number of spindles and poods of yarn which can be produced in the manufactories in the Governments of Toer, Moscow, Vladimir, Riazan, Kalouga, Toula, and Jaroslaff, and the number of spindles and poods of yarn which can be produced by the manufactories in St. Petersburgh and its environs. These Tables contain also columns showing the possible and the actual production of each mill in a week as well as a column showing the period at which it was supposed the different mills would cease working. According to this Table nearly all the mills in Russia would have ceased working by this time, but owing to unexpected demands from the interior, and to other circumstances which will be mentioned later, some are still working, though with but little profit, if any.

(No. 3).—Number of spindles and poods of Yarn which can be produced in the manufactories in the Governments of Iver, Moscow, Vladimir, Riazan, Kalouga, Toula, Jaroslaff:—

Moscow, January 15, 1863.

Although Russia is essentially an agricultural country, and in its true interests every effort ought to be made to develop its productive powers in that sense, there are valid reasons for the encouragement of manufactories in various parts of the country. Some portions of this vast empire are much less favoured as regards soil and climate than others. There are Governments which contain from three to seventeen acres of arable land per head of the population, while in other parts of Russia there is scarcely one acre per head of land suited to cultivation. It is natural enough that in districts where the soil fails the population should emigrate to seek more fertile land or the means of employing its hands in manufactories, and this happens even in some parts of Russia where the land is most fertile, but where, from want of roads or water communication, there are no means of, or great difficulty in, disposing of the agricultural produce; while the landed proprietors, instead of laying out their capital in improvements on the land which would only give them a small return after considerable delay, seized with avidity the chance of getting 10 per cent. or 12 per cent. for their money by placing it in a cotton mill or calico manufactory.

But there is another cause which stimulates manufactories in Russia, and that is the severity of the climate. In some of the northern districts field labour is only possible during from 130 to 150 days in the course of the year, and it may be imagined what a loss Russia would sustain, if out of 65,000,000 of her European

population 50,000,000 remained unoccupied during six or eight months of winter, when all agricultural labour is at a standstill.

M. Auguste Jourdier, in a late work on Russia, makes the following observations on the position occupied by the peasant in the internal economy of the nation:—"The 52,000,000 inhabitants not residing in towns are established in 285,064 villages and hamlets. These figures suffice to show the essentially agricultural character of Russia, which may be said to be one vast village spread over 87,000 geographical square miles. As the severity of the climate only permits of four or five months' labour in the field, it is indispensable that the Russian peasant should find various modes of employing the remaining seven or eight months of the year; consequently we find 200,000 peasants employed in the 10,500 manufactories of Russia. It is the peasants who work for these manufactories, without quitting their villages; it is the peasants who carry on the chief part of the commerce of the interior; it is the peasants, in short, who do everything."

This peculiarity of the climate has made the manufacturing industry a national want in many parts of Russia; it is this that developed manufactures in the villages long before they were established in the towns. There are villages, for instance, in Russia in which all the peasants have been for generations either weavers, tanners, shoemakers, locksmiths, cutlers, &c. The advantage of such village industry is evident, for by this natural union of agriculture and manufacture agriculture is not deprived of its hands, and the peasant is not removed from his family. It has none of the evils of manufacturing industry carried on on a large scale in great towns and cities; there is no agglomeration of the labouring classes, no indigent poor, or what is termed the proletariat class. This description of labour is chiefly carried on in the Governments of Moscow, Wladimir, Kalouga, Kostroma, and St. Petersburgh; the cloth produced being chiefly ordinary Russian calico of three descriptions, at 6 copecks, $7\frac{1}{2}$ copecks, and $8\frac{3}{4}$ copecks per archine, the length of the pieces being from 32 to 54 archines, the breadth $\frac{4}{4}$, $\frac{5}{4}$, and $\frac{7}{4}$ archine.

The price of this manufactory-labour in the villages is naturally very cheap, varying from 28 copecks to 34 and 50 copecks per day, according to the quality and the amount of the piecework a weaver can produce; only 15 copecks a day being paid in some places for the weaving of a coarse description of cloth. In many of the villages the warps and the cotton required for the weft is provided by speculators, or the whole amount of cotton required is given to master-weavers, who act as intermediate agents between the speculators and the peasants. The orders given in the villages by some of these capitalists amount to from 100,000 to 200,000 pieces annually. In some villages they have established large sheds with looms for the better description of cloth they require, besides the village looms which they employ.

Although, as has been shown, there are certain incentives to the establishment of manufactories in Russia, the disadvantages and obstacles to the progress of Russia as a manufacturing country are more numerous and important; among these may be mentioned want of capital, a high rate of interest, and the circumstance that spinners are compelled to sell their yarn for bills of long date, from twelve to eighteen months, which with the high rate of discount weighs more heavily on the price of cotton twist than all the other inconveniences put together. To these must be added the great distances and difficulties of transport and communication, the expense of mechanical, chemical, and other agents for manufactures; the high price of iron, of tools, and of every description of mechanism; the increasing expense of fuel, wood as well as coal, and the fact that in many cases the manufacturing establishments have been undertaken by amateurs, noblemen of large property, but without the necessary knowledge, who have been obliged to employ agents, highly paid, but in some cases not to be depended on. This latter inconvenience, however, has been less felt since the cotton and other factories have been taken up by companies who have employed English overseers. A considerable loss is also occasioned by the circumstance that many mills are obliged to cease work during the seasons of field labour, an interruption which the mill-masters can only prevent by an increase of wages. In consequence of the number of holidays, fifteen or seventeen is the minimum kept in the factories besides Sundays, the working year consists of only 294 days. Russia is also at a greater distance than other cotton spinning countries from the centre of trans-Atlantic commerce. The navigation is of short duration in all the northern ports of Russia, and nearly all the manufacturing districts are far removed from the southern ports, consequently Russian spinners have but a short time to provide themselves with the necessary stocks, and

they are obliged to do this on so large a scale that a much greater amount of capital is required for advances than in other countries; add to this the risk of loss from a sudden fall in prices, which may occur at a time when Russian spinners cannot avail themselves of it. These are some of the natural and unavoidable disadvantages arising from the employment of a foreign raw material, brought from a great distance, and obtained indirectly from an intermediate source.

Nevertheless, cotton-spinning in Russia has been a profitable speculation, giving in most cases a dividend of 11 per cent., while the original capital employed has in some instances been increased five and six-fold.

The following statement respecting the profits derived from cotton-spinning in Russia has been obligingly communicated to me by an English gentleman, who is a shareholder in one of the cotton mills at St. Petersburgh:—"This cotton mill was established in 1836, with a capital of 3,500,000 roubles assignats (or 1,000,000 silver roubles) in 7,000 shares of 500 roubles assignats (20*l.*). It contained originally about 4,400 spindles, and without addition to the capital subscribed, by means of the annual reserve of undivided profits, it was during the years 1844-5 and 1846 enlarged to 68,000 spindles, and it now contains 70,000 self-acting mule spindles, all new in 1859.

Calculated on the original capital and not on the market price of the shares, and including in the calculation the two years 1837 and 1838, for which no dividends were paid, the dividends have averaged $11\frac{26}{100}$ per cent. yearly for twenty-four years, ending December, 1860, and were for each year as follows:—

1839.	20 roubles per share, or	14·0 per cent.		1851.	—	—	
1840.	12 „ „	8·4 „		1852.	9 roubles per share, or	6·3 per cent.	
1841.	12 „ „	8·4 „		1853.	20 „ „	14·0 „	
1842.	12 „ „	8·4 „		1854.	16 „ „	11·2 „	
1843.	14 „ „	9·8 „		1855.	12 „ „	8·4 „	
1844.	18 „ „	12·6 „		1856.	25 „ „	17·5 „	
1845.	20 „ „	14·0 „		1857.	25 „ „	17·5 „	
1846.	24 „ „	16·8 „		1858.	15 „ „	10·5 „	
1847.	24 „ „	16·8 „		1859.	20 „ „	14·0 „	
1848.	26 „ „	18·2 „		1860.	12 „ „	8·4 „	
1849.	30 „ „	21·0 „					
1850.	20 „ „	14·0 „			386	270·2	

Average for twenty-four years, from 1837 to 1860 inclusive, 16·08 roubles per share, or $11\frac{26}{100}$. The average profits of a similar concern in Lancashire, during the same period of twenty-four years were larger, and so also were the profits of some of the cotton mills in Russia.

The way in which the factories are conducted in the neighbourhood of St. Petersburgh reflects great credit on the English directors and overseers at the head of these establishments. Among the principal mills may be mentioned the Nevsky Spinning Mills, established by Baron Stieglitz, but now in the hands of a company, of 160,764 spindles with all the latest improvements, which for many years was directed by the late Mr. Craig, a shrewd and clever Scotchman, whose loss is much regretted; the "Petroffsky" mill at Alexandrowsky, under the direction of Mr. J. W. Maxwell, established by Hubbard and Co., where, in one room, may be seen 1,100 looms; the "Russia," one of the oldest mills in St. Petersburgh, under the able management of Mr. Peter Johnson, to whom I am indebted for much interesting information respecting the cotton trade in Russia; and the "Sampson" mill, formerly established by M. de Maltzoff, a wealthy nobleman, but now in the hands of shareholders, and under the direction of Mr. W. G. Johnson, who has invented an ingenious batting machine, adapted to Surat and other ill-cleaned cotton, and under whose direction the machinery of that mill has been altered so as to permit of the spinning of short staple cotton of every description.

The following interesting Memorandum, for which I am indebted to the English director of one of the St. Petersburgh mills, and which is drawn up in reply to a series of questions proposed by me, contains the latest and most complete information I have been able to procure with reference to the cotton interest in Russia.

"The 70 mills in what are termed the Moscow district, and 25 mills in the St. Petersburgh district—in all 95 mills—comprise about all the cotton-spinning and weaving mills in this part of Russia, or all to which St. Petersburgh and the Baltic ports are the key.

"The accompanying list shows as nearly as it is possible to collect, the number of self-acting and hand mule and throstle spindles, amounting to 1,691,224

spindles of spinning, with a total of power-looms amounting to 16,141, the total nominal horse-power being 8,040.

"Estimating the cost of these establishments at 6,000 silver roubles per nominal horse-power, with 250 silver roubles per loom for the 16,141 power-looms, we get thus :—

	Silver roubles.
For spinning, per 6,000 lbs. × 8,040, equal to	48,240,000
For 16,141 looms, 250 × 16,141, equal to	4,035,250
	52,275,250

"This represents cost of land and buildings, with engines, boilers, shafting, gas, steam and water-pipes, with all machinery and utensils, tools, stores, and furnishing and working stock in progress. It will also include a working stock of cotton, say equal to a three months' supply, at 7 to 8 roubles per pood, with capital for wages for the same time, or equal to one month's supply of cotton at its present high price. The number of workpeople employed in spinning may be estimated at a little over three per nominal horse-power, when the mills work day only; or say, engaged in spinning mills 25,000 hands, in weaving mills—including winders, warpers, dressers, overlookers, warehouse department, twisting and drawing-in, &c.. &c.—at one per loom, or say 16,000 hands at power-looms; making a total of 41,000 hands. Thirty spindles of spinning may be taken to supply each power-loom, so that it would appear that the amount of spinning would be capable of keeping at work 56,375 power-looms. Of these there are now in the country 16,141, so that to consume the whole of the yarn produced by power-looms would require 40,234 more power-looms.

"But this surplus yarn furnishes employment in the winter to not less than 440,000 people. One power-loom may be reckoned as equal to three hand-looms, and each hand-loom employs two people—viz., the weaver and the winder—as all the yarn is sent on in the hank and has to be rewound. As these looms only work in the winter months, and as the surplus yarn, after supplying the power-looms, would give constant work to 220,000 or 230,000 hand-looms, working summer and winter, the cotton manufacture may be said in the winter to employ 480,000 people.

"With reference to the earnings of the people employed in spinning and weaving mills, the wages average per head, including men, women and children, 12 roubles and 5 copecks per month, or 9*s*. 4½*d*. English per week; more than the average of mills in Lancashire, which is about 8*s*. 3*d*. per week.

"With reference to the cost of mills in Russia, there are numerous reasons why a mill in Russia costs double that of a mill in England. In the first place bricks cost in Russia as many roubles per 1,000 as they are shillings in England, and nearly double the quantity go into a Russian mill, all the good mills here being most substantially built; mortar costs treble the English price; all iron-work costs double, and all machinery from 25 to 35 per cent. dearer than in England; then, again, all skilled labour is three or four times better paid, and all the common labour is fully 10, 15 or 20 per cent. dearer than in England, if you take the work you get for the money, the day wages look less, but measure by the work done.

"As regards the expenses of working mills in Russia, steam-power costs in coal three to four times or even five times more than in some parts of Lancashire. Coal at 13 copecks per 36 lbs. is about 25*s*. per ton. All stores have to come from England, and an extra stock must be kept to provide against a long winter. The expense of keeping a mill warm, even with double windows, is three times the amount it would cost in England.

"The present spinning machinery in Russia is capable of consuming about 2,000,000 poods of cotton and producing about 1,700,000 poods of yarn, of the average numbers 30 to 40.

"The power-looms may produce about 192,000,000 archines of cloth per annum, which, divided amongst 60,000,000 of people, is little more than 3 archines per head; the hand-looms make 5 archines per head more; or say, total produce = 8 archines per head.

"In addition to the spinning and weaving mills, there is in the cotton interest bleaching, dyeing and printing to some extent. At this time the whole of these interests are nearly at a standstill on account of the high price of cotton. It will be easily seen that to purchase only one year's supply at the present price would

absorb, in addition to the 52,000,000 already invested, another 60,000,000 silver roubles—in all 112,000,000 silver roubles. This might be, if we were only sure that each head of the population were or would be customers to the extent of only 2 roubles each. The 2,000,000 poods of cotton would, if it produced 1,600,000 poods of cloth, be worth in its finished state, say 96,000,000 silver roubles, at 60 roubles per pood.

"My own impression is that we work too much on one class of yarn and cloth, as by far the greatest weight of the yarn hitherto produced is in numbers from 30 to 40, and made into cloth for printing. We want more 'domestics,' or cloth to suit the million; the same amount of machinery would then consume 4,000,000 poods of cotton. But before this change comes about cotton must go back to 7 or 8 roubles per pood. There is little doubt but when cotton can again be got at a lower price, there will be a great change from the present fine numbers—say to numbers under 20, from numbers 14 to 20.

"The rule for estimating the cost of mills in Russia is the following:—

	Silver roubles.
Say, per nominal horse-power	6,000
Per spindle	29
Per loom, in addition	250

"Average wages of people, 12 roubles 50 copecks per month. Number of people employed in spinning, about three per nominal horse-power, in weaving, one per loom.

"In England 500*l.* per nominal horse-power is considered quite an ample capital.

"It will also appear that for every hand employed in a spinning mill, there is an apparent outlay of 2,000 silver roubles in machinery, &c.

"The annual amount paid in wages to the 41,000 mill operatives, is about 6,150,000 silver roubles, then come salaries of all the masters and clerks, &c., which are more than in England.

"The cost in coal, oil, tallow, sundry stores, iron, paint, glass, steel, &c., is generally equal to the amount of the wages in Russia.

"In England the rents, interest, rates and taxes, oil, coal, tallow, and stores, are not more than the wages, but this difference may be accounted for by the extra cost of fuel in Russia.

"A pood of yarn No. 34 s., woven into cloth for printing, viz.: In 72 reed with 18 picks per quarter inch and 28 inches wide, will make 300 archines of such cloth."

December 15, 1864.

The mill-master who has supplied me with the above details informs me that the factory in which he is engaged has now ceased to work, as, at the present high price of the raw material, cotton could only be manufactured at a loss of 10 silver roubles per pood, or 10*d.* per pound.

The proprietors and shareholders have, however, decided on keeping all the skilled workmen at two-thirds of their wages, although there is no other employment for them than to polish and keep the engines and machines in order; this arrangement is not so much out of regard for the welfare of the operatives as in the interest of the mill, for, if the skilled workmen were turned off and a favourable conjuncture should prevail of cotton spinning at an advantage, it would be difficult to replace them; whereas, labour being scarce, the operative would have little difficulty in finding other employment. There is in reality no artizan class in Russia, and with a population at a great disproportion to the extent of territory, there is no surplus labour, particularly in the spring and summer, when every arm is required for the plough or the reaping-hook. If disengaged at that time, the factory labourer will start off for his native village, and travel perhaps 200 or 300 miles on foot, to assist in the field labour of the season; while if the mill stops in the winter, as the Russian peasant can turn his hand to anything, he may find work as carpenter, wood or water carrier, or stableman, or he may find employment in a manufactory of another description.

The following information has also reached me from the English director of another mill in the neighbourhood of St. Petersburgh, in reply to the series of questions above referred to, which I had forwarded to him.

"Before the American war in 1860, the amount of cotton imported into Russia by sea through the Baltic ports, was 2½ million poods; in 1863, about 500,000

poods; in 1864, about 650,000 poods; middling Orleans, before the war, cost 7 silver roubles per pood; now, 1864, 34 silver roubles per pood. Pernams, before the war, little used, now, 35 silver roubles per pood. Surat, before the war, 5 silver roubles; now, 1864, 25 silver roubles per pood. Bokhara and Persian about 50,500 poods were imported before the war by the eastern frontier, this year, 1864, the importation from Bokhara reached about 750,000 poods, the quality of this cotton varying a great deal, the prices rule from 18 to 25 silver roubles per pood at the present date.

St. Petersburgh cotton mills work only during the day time, whereas in Moscow and in the interior, they work day and night, requiring two sets of hands.

Prices paid to the workpeople in the different processes of cotton manufacture.

To blowing-room boys, 8 silver roubles per month; card-room men, 10 to 15 silver roubles; women, 9 to 12, boys, 8 to 9 silver roubles per month; roving-rooms, 9 to 11 silver roubles, all women and girls; spinning-room, each piecer is paid on self-acting mules 40 copecks per pood, he spins for Nos. 38 and 40 yarn, out of which he pays piecers and boys, leaving for himself, say, 20 silver roubles per month; winders earn 10 to 12 silver roubles per month, all females; warpers earn 10 to 13 silver roubles per month, all females; twisters, 9 to 10 silver roubles per month, girls; dressers (hot-room), and hard work, 30 to 40 silver roubles per month, all men; weavers 10 to 18 silver roubles per month, both sexes; overlookers, 20 to 25 silver roubles per month. All are paid piece work, and mills pay generally monthly.

First cost of putting steam engines and boilers ready for work, with driving out of the engine house, may be reckoned as costing 50*l.* per nominal horse-power.

Before the war, the fuel used in St. Petersburgh was all coal; since, on account of freight being high, half wood and half coal; coal costing fully 25 per cent. more now. In Moscow, and the interior, wood alone is used. In St. Petersburgh, all mills are lighted up with gas, each making their own hours of lighting for one season, as follows:—

	Morning.	Evening.
	Hours.	Hours.
August	..	9
September	25	50
October	72	90
November	90	110
December	98	80
January	81	87
February	45	30
March	9	..
	420	456
Total	876	

In St. Petersburgh, gas is made from coal; in Moscow, &c., from birch, bark, and cheap oils and fatty matters. Each gas burner consumes $2\frac{1}{2}$ cubic feet of gas per hour.

Very little yarn is imported into Russia, and that of finer numbers than can be made here. Scarcely any of the mills have a supply for more than one, two, or three months in place of six, nine, and twelve months as formerly was the case in the winter. This mill has been kept working all the winter, with only about a month's supply of cotton beforehand, the cotton being received by way of Hamburgh, and thence by rail, as the cost that way is only about 50 copecks per pood more than the cost of bringing it by water in September, and the cost and risk of holding a large stock of cotton under the present circumstances is avoided. The stagnant state of the trade in Moscow has caused a still further diminution of the production within the last month (December 1864), and there is every prospect of the produce of the mills here and at Moscow being still further reduced. All the larger cotton mills at St. Petersburgh are held by share companies, limited liability; but in several of them the shares are in few hands: about half the mills in the interior have adopted the same form, as it affords many conveniences and a ready means of obtaining formal authorization from the Government for establishing mills. Since the war in 1855, wood has been used as fuel for our steam-engines; in the eleven years previous, nothing but coal was used at $9\frac{1}{2}$ copecks per pood of 36 lbs. English; since the war, coal is $12\frac{1}{2}$ copecks per pood. Wood is equal to $\frac{1}{10}$th for coal, and is less injurious to the boilers; it requires one-third more boiler power as compared with coal, to burn it economically, and as we required about 350,000 silver roubles per year, the saving from wood is considerable.

In going over the cotton-mills at St. Petersburgh it is impossible not to be

struck with the influence for good exercised by the English directors and overseers of these establishments, to whom the proprietors and shareholders appear to have given the fullest discretion and a liberty of action which they well deserve; nor can one view without interest the independent and honourable position held by these men, who, after having passed from their childhood through each phase of factory existence, acquiring thereby a thorough knowledge of everything relating to their business, have by their probity and abilities raised themselves as it were from the ranks of labour to posts of great importance and responsibility, and are now enjoying the appropriate rewards of a life of intelligent industry.

Many of the Englishmen attached to these mills have no inconsiderable share in the profits of the business, in which also some of the first-class Russian operatives have invested their savings.

As to the mills themselves they may be said to be even on a better footing than some mills in England, in which when once established no change is made and no expense is undergone that can possibly be avoided; whereas some of the factories here adopt every fresh improvement, a certain sum being set apart for the purchase of any useful invention that it may be thought advisable to acquire. The ventilation of these mills is well managed by means of fans; the batting room, in which it was formerly scarcely possible to see anything on account of the dust and flue flying about, is now almost as clean as any other room in the building. In the Sampson Mill, in which Surat cotton is much used, there is none of the smell said to be so offeusive and injurious to health in some English mills in which it has been employed. All the rooms are kept clean, and the floors are thoroughly washed at least once a week. The severity of the winter demands extra precautions against the cold, and double windows are used in every part of the mill.

In one of the factories which I visited I found 1,400 operatives, 900 men and 500 women and children; the working time for all without exception was 13½ hours per diem. All hands come to this mill at 5 A.M. summer and winter. If a man is incapacitated from work by being intoxicated, which sometimes occurs, he is sent home without being allowed to work that day, and he is fined one day's wages besides, so that if he earns a rouble a-day (3*s*. English), which an active man may do at piece work, and is fined one day's labour, he loses 6*s*. or two days' wages; the consequence is that drunkenness has diminished among this class of operatives to a great extent.

Eight o'clock is the breakfast hour; the engine does not stop; but the people take it by turns to watch the looms and spindles while the others breakfast. This meal is of the most frugal description; a large lump of rye bread cut in pieces is placed in a bowl, moistened by being held for a moment under the water-tap, and eaten with the addition of a little salt sprinkled over it. Some of the women drink tea or coffee; the former being expensive is little used, but coffee at 25 copecks per lb. (about 8*d*.) is much drunk. Formerly coffee was brought ready made to the mill, but now it is made on the spot; coppers at each end of the building provide as much hot water as is required, which is served out to all who come for it at the fixed hours of 8 A.M. and 5 P.M. It is the business of the door-keepers to have hot water ready at those hours and to keep the place clean where it is served out.

At noon the engine is stopped, and all hands living within half a mile quit the mill; those that are lodged at some distance are allowed to have their dinners brought to them. This meal consists generally of a large bowl of thick soup made of buck-wheat meal, beef, and cabbage, at other times of a pudding or pie made of fish and buck-wheat or of buck-wheat and eggs. These dishes are palatable, strong, wholesome food, and are as well known in the Imperial Palace and the mansions of the nobility as they are in the "isbas", or cottages of the peasantry. When the men mess together, this meal as well as any bread they may eat, with perhaps an additional herring or a couple of pickled cucumbers, costs 30 copecks, rather less than 1*s*. per head. There are other messes which cost as little as 10 copecks a-head.

One hour and a half is the time allowed for dinner, but this is the only cessation from work during the 13½ hours of labour in the mill.

No spirituous liquors can be brought into the building, nor is smoking allowed.

If a man is suspected of having a flask of brandy concealed about his person he is searched; and as a rule, every operative, male or female, is searched before leaving the mill. This is a necessity, for the habit of pilfering is so common among

the lower classes, that the Russian peasant will carry off anything he can lay his hands on, if it be not too hot or too heavy. On one occasion, in this mill, two of the nozzles of the fire-engine hose were carried off; they could have been of no use to the thief, though, had a fire broken out, their loss might have occasioned serious inconvenience. The search is carried on in the following way:—As the clock strikes twelve (and in this mill there is a clock in every room) all the women and girls move through the mill in one direction, the men and boys going out at the opposite side, and as the people leave the building the doorkeepers pass their hands down the dress of each person, the women and girls being searched by a female. The operatives, who are generally very docile, quickly become expert workers; they never attempt to do anything but exactly what they are told to do; no Arkwrights or Cromptons are likely to be found among them, but on the other hand they are much more easily managed than the same class in England. Some few of the operatives can read, and as the mill is warmer, cleaner, and more comfortable than their own homes, many of them come in twenty minutes before working time, and sit in attentive groups round any comrade—a boy it may be—who has a book or a newspaper, and is able to read it aloud for the benefit of his companions.

No instruction is afforded to the Russian workmen or their children in any form or in any establishment connected with the cotton-mills or other factories. In the year 1860 Sunday-schools for the lower classes were established, and at one moment had made considerable progress; in that year no less than fifty were opened in the district of St. Petersburgh. This example was quickly followed, and others were opened in the chief towns and principal villages of the different provinces; and the movement was so far encouraged by Government, that school-houses were gratuitously given and lecture-rooms were permitted to be opened in Government buildings. Any one was allowed to found a Sunday-school for instruction in religion, reading, writing and arithmetic; little more than a nominal supervision being exercised over them by the authorities connected with the Ministry of Instruction. The lower classes, and especially the mill operatives in the neighbourhood of St. Petersburgh, frequented these schools in considerable numbers, and seemed eager to avail themselves of the gratuitous instruction thus afforded to them. The experiment, however, was of short duration; the freedom from all but a slight surveillance enjoyed by these schools is said to have been taken advantage of by designing persons to disseminate irreligious doctrines and views hostile to the established Government. In the month of June 1862 all the Sunday-schools were closed.

As the Imperial Government does not interfere with the religious instruction of foreigners, and as the English mill-masters have considerable latitude allowed them, they have been enabled to a certain extent to provide for the education of the children of their countrymen, as well as for the instruction of their poorer fellow-labourers.

In this respect great credit is due to Mr. W. G. Johnson, to whose energy the English workpeople owe the establishment of a chapel attached to the Sampson mill. Here Divine service is performed by the Rev. Mr. Arthur Thompson, the Chaplain of the Embassy, in addition to the regular services in the chapel of the British factory. This gentleman has also established monthly meetings for the working classes (in imitation of what are called cottage lectures in England) at the Sampson mill chapel, at Mr. Peter Johnson's of the "Russia" mill, at the Alexandroffsky chapel, and at the house of Mr. F. Hill, the British Vice-Consul; who has also set apart a room for the celebration of Divine service, and for lectures and readings for the benefit of the workmen attached to the iron-works with which he is connected. By his activity and unwearied exertions in behalf of the community of British working men of St. Petersburgh, Mr. Thompson has earned the thanks of his poor countrymen, who have expressed themselves deeply and gratefully indebted to him.

It is not the custom of the Greek clergy to afford religious instruction in this active manner to the poor; but the Russian working classes attend Church service very regularly, and they attach much importance to other religious ceremonies.

Occasionally a deputation of the girls of a mill will apply for permission to give the rooms an extra wash, as they propose to ask the "pope" to come and bless their labour; such a request for extra cleanliness is of course always complied with. Next day, when the mill looks its best, and the engines and machines have received an extra polish, the priest arrives and goes through all the rooms, chanting and

sprinkling with holy water the looms, the spindles, and every portion of the building. On one of these occasions the manager asked the priest if he could not exercise some wholesome influence over his flock, so as to check the habits of lying and pilfering to which they are so much addicted. "What can I do?" answered the priest; "you cannot grow flowers on clay."

On Saturday the mill closes at noon, and remains closed till Monday morning. In some factories the workpeople are paid once a week, but in general they receive their wages once or twice a month; the former is by far the best plan, as the workman has less temptation to squander his earnings in drinking. As it is, few sober workmen are to be found on Saturday evening, nor is this to be wondered at when brandy is so cheap.

The bottle of gin which in England would cost 3*s.* is here replaced by a bottle of much stronger votki at 30 copecks, or less than 1*s.*; a large wine-glass of this liquor costs 3 copecks, about 1*d.*, and for 9 copecks, about 3*d.*, a man can buy two gill glasses of strong corn brandy, quite enough to make even a Russian peasant drunk, if taken at once. It is on these half-holidays and fête-days that the thoughtless, light-hearted, and good-natured character of the Russian "mujik" is seen; some of the workmen will be singing in groups, others incessantly embracing each other; for the Russian peasant, who is never quarrelsome in his cups, becomes both musical and affectionate when intoxicated. Here the father of a family may be seen reeling home, playing on the "balalaika" (the rudest form of guitar that ever was invented), attended by his wife and children, in whose eyes his drunkenness is no shame, the drunk, it may be, leading the drunk; or one who is helplessly inebriated being tenderly carried home by his more sober comrades.

Unfortunately, the beneficial measure adopted two years ago of abolishing the nefarious system of brandy-farming, while it has substituted a wholesome liquor for the poisonous mixture formerly sold as brandy, has rendered it so cheap that the poor peasant cannot withstand the temptation of purchasing it.

Drunkenness, it cannot be doubted, is greatly on the increase among the lower classes, wherever it is not checked by their interests; and the supply of liquor would appear to be fully equal to the demand, if one may so judge by seeing, for every cart containing merchandize of any kind, four or five carts conveying casks of brandy in every direction. Some improvement in this respect may, however, be shortly expected, as the result of the late measures adopted by the Minister of Finance, according to which the excise duty on brandy is to be raised 25 per cent., and the sum to be paid for licences to sell brandy will be nearly doubled.

As far as the establishments themselves are concerned, the cotton mills in the neighbourhood of St. Petersburgh and Moscow will bear comparison with the best in England, and although there is little chance of Russia ever being able to manufacture cotton on such favourable terms as other manufacturing countries, it cannot be doubted that it contains the elements of a considerable development of that trade.

It would not be difficult to show that Russia would be the gainer did not a single cotton mill exist in the country; and, since we have seen that the loss the Russian nation sustains in order to support this artificial industry has been calculated at 17,000,000 silver roubles per annum, it may be of interest to endeavour to calculate the result which might be attained by a thorough adoption of free-trade in cotton goods.

The population of the whole Russian Empire, according to the eminent statistician attached to the Ministry of the Interior, M. Von Buschen, amounted in 1858 to 74,000,000 inhabitants divided as follows:—

European Russia	59,330,752	Siberia and adjacent countries .	4,035,000
Kingdom of Poland . ..	4,764,446	The Caucasus, exclusive of Ab-	
Grand Duchy of Finland ..	1,636,549	chassia and Daghestan ..	3,764,000

The three first divisions, containing the principal consumers of cotton fabrics, amount to about 65,500,000.

Applying to this number the calculations of M. Tegoborski, we obtain the following result. This population may be divided,—rural population, 60,500,000; urban population, 5,000,000; total, 65,500,000.

Taking at the very lowest seven or eight archines of calico per inhabitant, which is barely what is required for two shirts, and adding other articles of clothing for men, women, and children, the consumption cannot be placed at less than ten

archines per head; this for a population of 60,500,000 (the rural population) would amount to 605,000,000 archines, which at 6 copecks per archine would give 36,000,000 silver roubles as the value of that consumption; but as one-tenth of the male and one-third of the female rural population use a finer description of cloth, this portion of the consumption may be set down at a value of 40,000,000 silver roubles.

The urban population of 5,000,000, comprising the nobility, burghers, clergy, employés, and officers of all ranks, in an easier condition of life, use a finer quality, and consume a larger quantity of manufactured goods; taking their consumption at the moderate average amount of 20 archines per inhabitant, this would give 100,000,000 archines, the value of which, at 20 copecks per archine, is 20,000,000 silver roubles, or a total amount of consumption for 65,500,000 inhabitants of 705,000,000 archines, of the value of 60,000,000 silver roubles (without taking into consideration the amount required for exportation), that is to say, less than one silver rouble (3*s.* English) per head. The above calculations are made by M. Tegoborski with reference to the linen trade, but as the two extreme prices per archine of linen, *i.e.*, 6 copecks and 20 copecks, are also the average extreme prices in the consumption of cotton fabrics, they may be applied equally to the cotton trade.

It might be supposed when the linen and the cotton shirt are of one price, the former, being the more durable of the two, that the linen article would be preferred by the peasant, but this is not the case; the finer texture of the calico, and the brilliant colours with which it is dyed, make the latter fabric the favourite clothing of the lower classes to the great detriment of the native linen industry.

That the above calculation, as applied to cotton, is not far wrong, can be easily shown. At 8 archines to the lb., 705,000,000 archines will give 88,125,000 lbs., or 2,203,145 poods; about the amount of the importation of raw cotton for one year; that for instance of 1857 being 2,219,854 poods.

It has been calculated that the consumption of cotton per head in Russia ought to be ten or eleven times what it actually is. According to M. Tegoborski in 1852 that consumption only amounted to 88 copecs silver (2*s.* 6*d.*) per annum.

The actual amount, according to the same authority, of cotton goods manufactured for the home market in 1852 is 1,420,000 poods, this sum multiplied by 11 would give 15,620,000 poods as the amount of cotton goods that would naturally be consumed by the population of European Russia alone, were the trade left open by the imposition of a slight duty on foreign cotton goods imported into the country.

Supposing, for the sake of argument, that no cotton mills existed in Russia, and that the duty on the importation of cotton goods was so moderate as to enable the whole natural demand of the population of European Russia to be supplied from the cheapest foreign market, at a duty say, for instance, of 4 silver roubles per pood for every description of cotton-manufactured goods, the natural demand of 15,620,000 poods, at a duty of 4 silver rupees per pood would give to the revenue the sum of 62,480,000 silver rupees; whereas under the present prohibitive Tariff the total amount per annum raised by the Customs duties on cotton woven goods of every description amounts to only 1,453,083 silver roubles, as is shown in the accompanying statement of the amount of cotton, raw, spun, and manufactured, imported into Russia during the year 1860, the value of the same, and the amount of duty collected thereon.

	Poods.	Value.	Duty Paid.	
		Roubles.	Roubles.	Roubles.
Cotton, raw	2,610,591	19,108,298	652,648	
Cotton yarn, white	115,599	2,370,819	404,596	1,133,758*
Ditto, dyed	15,303	483,168	76,514	
Cotton goods :—				
Heavy, plain	41,805	2,192,010	606,069	
Ditto, prints	25,465	1,530,973	689,706	1,453,083†
Light, plain	2,064	234,149	82,554	
Ditto, prints	978	104,837	54,754	
	2,811,805	26,024,254	..	2,586 41

It has been shown above that the amount of capital employed in the cotton mills established in Russia is calculated at 50,000,000 silver roubles; so that the

* Amount of duty collected on raw cotton and yarn. † Amount of duty collected on woven goods.

revenue of a single year raised by a duty of 4 silver roubles per pood on the natural consumption of cotton goods in Russia would not only equal the value of the entire capital invested in the cotton mills of the country, but would leave a surplus beyond that sum more than eight times larger than the revenue derived from the actual prohibitive Tariff on cotton goods now in force. Should therefore such a necessity arise, the Government would be enabled by the proceeds of such a reduced duty to repay, on the most liberal terms, that amount of capital which, on mistaken grounds of political economy, the monied men of Russia had been induced to lay out in an artificial branch of industry.

But the supposition that the consumption of cotton goods in Russia should increase to eleven times the amount fixed as its proportion in 1852, may be objected to as a gross exaggeration, since it would imply an average consumption larger than that of England. According to M. Tegoborski that consumption in England in 1852 was at the rate of 7 silver roubles, 34 copecks (or 21*s.*) per head, while in the same year the consumption in Russia was only 88 copecks per head; which, multiplied by 11, would give 9 silver roubles, 68 copecks, or 27*s.* per head. But as cotton goods have now driven linen fabrics almost out of the home market, the Russian population being for the most part completely clothed in cotton, summer and winter, such a result is by no means impossible. At all events there can be no reason why the consumption should not reach that attained by the population of the Zollverein, which in 1852 was 3 silver roubles 11 copecks per inhabitant; or, as the Russian peasant uses so much more cotton than the peasant in Prussia, or rather would do so if it were possible for him to obtain it, the consumption per head of the Russian population might be placed at 3 roubles 50 copecks (10*s.* 6*d.*), which is about four times the amount at which it was calculated in 1852.

Taking once more the amount of goods manufactured for the home consumption at 1,453,083 poods, this multiplied by 4 would give 5,812,332 poods, the duty on which at 4 silver roubles per pood would amount to 23,249,328 silver roubles; so that in three years the amount of duty collected at that rate would be equal to the repayment of the capital invested in the cotton mills of Russia, and would leave a surplus to the Treasury of 19,500,000 silver roubles after the conclusion of that supposititious operation.

If the calculations in M. Tegoborski's work were sound at the time he wrote, which is undoubted, they must be still more valid at the present date, since the Act of Emancipation, which has raised into existence 23,500,000 of independent small farmers possessing the means of satisfying their requirements, which did not enter into the calculations of that industrious and able writer. It may indeed be shown, even at the present time, and before the real effect of that great social revolution can have made itself thoroughly felt in the country, that by the mere fact of having at his free disposal his time and wages, the Russian peasant is in easier circumstances, and consequently able to consume a larger amount of cotton goods than a labourer of the same class in England. Hitherto, according to the opinion very generally received, the condition of the labouring classes in Russia has been one of abject misery and extreme poverty; but such an impression is either derived from incorrect information or from erroneous suppositions, for, in some respects, the Russian peasant is better off than the working man in many other countries. In the first place, neither he nor his family can ever be said to suffer from hunger or cold. His black rye bread would certainly not be palatable to an English workman, but it is very nutritious, and with plenty of it at 2 copecks, or less than 1*d.* per lb., he cannot starve. His cottage, which is as nearly air tight as can well be, is heated by an enormous stove to such a degree that throughout the winter, when indoors, he wears nothing but a cotton shirt and trousers of the same material; his rooms are dreadfully stuffy, it is true, and, once a day at least, when the fire is lighted, they are filled with smoke, as there is no chimney; but it is the heat and not the cold that might be complained of in his dwelling. When he goes out he puts on well greased boots and his sheepskin pelisse, a filthy dirty-looking dress, no doubt, for he wears it for several years, but it is impervious to cold; and dirty though the Russian labourer be in appearance, he is not so in person, as he takes a steam bath at least once a week. The furniture of a Russian peasant's cabin consists of a wooden bench running round the room, and a shelf to match, about the height of his head from the floor, with a table and perhaps a couple of stools: there are no beds, for the whole family sleep on the stove, wrapped in their sheepskins; the drinking and washing apparatus, "rukomoinik," is of the most primitive descrip-

tion, consisting of a pitcher with a spout, suspended from the rafters over an empty barrel; equally primitive is the contrivance for light, "lutchina," a stand about 4 feet high supporting a large pair of iron nippers into which are fixed the pine splinters that do service for candles. In every cottage may also be seen a small oblong box suspended in the centre of the room from a pliant birch pole fixed in the roof; this is the "liulka" or cradle; attached to the pole is a string with a loop, into which, by inserting her great toe, the mother, who may be sewing or weaving, can from any part of the room communicate a swaying motion to the cradle, a vertical instead of a lateral motion, but one that appears to have an equally soothing effect. A couple of iron pots and earthern pipkins, a wooden bowl and as many wooden spoons as there are mouths to feed, is all that is required for the preparation and despatch of the meals of a Russian family. Up to the present time fuel may be said to have cost the peasants nothing, at all events in the northern provinces, where they have been in the habit of taking all they require, without let or hindrance, from the woods belonging to their landlords; under the new regimé established by the emancipation, this may be altered, and in the central and southern districts the want of wood is severely felt, the peasants being compelled in many places to use sun-dried dung for fuel.

In order to show more precisely the position of the Russian operative, it may perhaps be as well to compare his wages and expenses with those of an English labourer in the same position.

A letter from a correspondent of the "Times" newspaper, published in the month of January, 1863, contained a statement, evidently compiled by a gentleman residing on the spot, of the condition of the labourers in a village belonging to a manufacturing district; which seems to be a suitable example for instituting this comparison with the condition of the *quasi* agricultural Russian operative.

This village, in the west of England, which was entirely supported by a cotton mill, contains 1243 inhabitants, of which 689 are workers, whose average earnings when the mill is in full work is 12*s*. a-week each; the income per head on the whole population being 6*s*. 8*d*. weekly; children under 13 years of age get 2*s*. 6*d*. a-week; they work half the day and attend school the other half; at 13 years old they work full time and their wages become 5*s*. a-week, and from this sum to 30*s*. weekly the wages vary according to age, skill, and employment.

The income of different families varies from the same causes. One family of nine persons, five of whom were workers, had an income of 5*l*. a-week; another family of six had an income of 17*s*., and these appear to be the two extremes; the income per head in these families being, for the lowest about 3*s*., the highest 16*s*. per head weekly.

Rents are from 2*s*. to 3*s*. a-week, according to the size of the house; coals are 6*d*. the cwt., butchers' meat 8*d*. per lb., and largely consumed. There is a school and public-house in the village and a church near, the two former well attended, the church not so. The education is entirely free. Every young person in the village can read and write; there is a clothing club for small weekly deposits on which the millowner allows 5 per cent. The mill is now closed, the inhabitants for the most part live on an allowance obtained from the Board of Guardians and the relief fund. Rent, fuel, and food, necessary to supplement the relief so obtained is provided by the millowners, at an expense of about 70*l*. weekly.

The present income of the population, in addition to rent and fuel, is—Single persons 3*s*. 4*d*. per head weekly; families of four and under, 2*s*. 6*d*.; five and under, 2*s*. 4*d*.; six and upwards, 2*s*.

This seems to be ample, for the people are contented and the health of the village appears to be even better than in "better times."

The following is taken from a statement, that appeared about the same time, of the condition of the agricultural poor in the west of England:—

Farm labourers' wages 8*s*. to 10*s*. a-week and cider; carter and head shepherd 8*s*. a-week, with cottage and allowances 2*s*. more, say 10*s*.; reaping, mowing, and hoeing done by measure; cottages 1*s*. to 1*s*. 6*d*. per week when they belong to large proprietors, smaller proprietors ask and get more; coals 1*s*. per cwt. Wages of boys 6*d*. to 5*s*. per week till 18 years old.

This is the condition of healthy vigorous labourers. The maimed or incapable receive a parish allowance of 2*s*. 6*d*. a-week for a single man or woman, 4*s*. 6*d*. for a couple. Out of this they pay 1*s*. 4*d*. for house and garden, 1*s*. per week for coal, and 2*d*. per week to a clothing club; this leaves them 2*s*. a-week to live on; they do live and do not complain, and they have no debts. Another couple with eight

children under 12 years old live on 10*s.* per week earned by the father, and 2*s.* per week by the eldest boy; they pay 1*s.* per week for house and garden, 1*s.* for coals, and 10*s.* is left for all other necessaries for ten people!

The unhandy or weakly have lower wages. One man receives 8*d.* per day, the rate at which a woman is paid, and with this he has to keep himself and child. All these people send their children to a school provided for them at 1*d.* or 2*d.* per week, and these poor people have cheerfully given their mite to assist the suffering cotton-spinners of Lancashire. Meat is 8*d.* per lb., the poor seldom see it and never buy it. Bread of course bears the current price of the season, and with potatoes forms their chief food.

Although I have endeavoured to procure information respecting the united wages of the different members of a family working in a Russian mill, I have not succeeded in obtaining it; but the following statements have been given to me, showing the wages and expenses of working men in Russia of different classes:—

Wages and expenses of a first-class workman in a cotton mill at St. Petersburgh:—

	Per Diem.	Per Week.	Per Annum.
	Rs. cop. *s. d.*	*s.*	£ *s.*
Wages	1 0 = 3 0	18	43 4
Expenses:—			
Food	0 30		
Lodging and fire	0 18		
	0 48 = 1 4	8	19 4
Dress	..	..	1 18
Boots, of which a peasant uses four pair, at 9*s.* per pair	..	..	1 16
Sheepskin pelisse costs 9 silver roubles (27*s.*), generally worn three years, say at	..	..	0 9
			23 7

	£ *s.*
Wages	43 4
Expenses	23 7
Remainder	19 17

Leaving 19*l.* 17*s.* for other expenses and for his family, if he is not addicted to drinking.

There are men of this class, however, who though in the receipt of the above wages manage to save more by living and messing together in a cheaper way; their object being to return to their village as soon as they have earned a sufficiency. These men have shelter for the night in a warm room, on the floor of which they lie with no other bed than their sheepskins; twenty or more labourers are thus stowed away, at an expense of 5 copecks each per night, or about 1*s.* 6*d.* per week; and by paying 10 copecks each per day, about 3½*d.*, to a mess, they are provided with a thick soup which is supplied to them twice a day; at noon, and at 8 P.M., after their work; and which is composed of the following ingredients and quantities for three persons:—

	Copecks.
Meat, 2 lbs., at 9 copecks (3*d.*) per lb.	18
Onions	2
Buck-wheat meal	3
Sauerkohl, peas, or potatoes..	4
	18
Bread, 2 lbs. each, at 2 copecks per lb.	12
	30

Say 30 copecks, or 10 copecks per man. The meat boiled in this mess is of the coarsest and most inferior description.

	Copecks.	*d.*
Say daily food per man	10	equal to 3½
His expenses are, therefore—		
Lodging, per diem	5	
Food	10	
1 quart bottle of quass	1	
2 gill glasses of brandy	9	
	25	equal to 9*d.*

Expenses for food and lodging 9*d*. per diem=10*l*. 6*s*. per annum; dress, 4*l*. 3*s*.; total, 14*l*. 9*s*. Wages, 43*l*. 4*s*.; expenses, 14*l*. 9*s*.; leaving 28*l*. 15*s*., which a first-class labourer may save. This is an extreme case of a man receiving high wages living like one who receives the lowest wages.

It has however been shown above, on the authority of one of the English mill masters at St. Petersburgh, that the average wages of men, women, and children, in a cotton mill are 9*s*. 4½*d*. per week, or 22*l*. 10*s*. per annum; on deducting the above expenses, 14*l*. 9*s*., there still remains 8*l*. 1*s*., as the average sum which a labourer may save per annum when working in a cotton mill.

The wages of an out-door labourer, on a railway for instance, are 50 copecks (1*s*. 6*d*.) per day=9*s*. per week, or 21*l*. 12*s*. per annum; expenses as above, 14*l*. 9*s*.; remainder, 7*l*. 3*s*.

I ascertained, however, that some of the men working on the Oranienbaum Railway, near St. Petersburgh, managed, by economy in dress, by drinking nothing but water, and by living chiefly on bread, onions, cucumber, and an occasional salt herring, to send home 100 silver roubles (15*l*.) to their families. So that it is possible for a hardworking man to live on 6*l*. a-year.

The following statement of the condition of such labour during the existence of serfdom is from a railway contractor:—

"The railway or other contractors hired from the proprietors the number of serfs required for the working season, *i.e.*, from the 1st of May to the 1st of November; one half of the sum agreed upon being paid down at once. The contractor was bound to lodge and feed the labourers during the whole season, to take care of them if they fell ill, to provide them with boots and gloves, and to give them a Russian bath once a week.

The expense of their food came to about 20 copecks a-head per day, lodging was provided in barracks built along the railway, and cost about 3 silver roubles per man for the whole season; these two items amounting to about 40 silver roubles (5*l*. 11*s*. 8*d*.), nearly 1*l*. per month, for the season of 184 days. Of these, however, the maximum number on which the labourer works is 135, while the average is only 120, deducting fête days and days of bad weather. With the exception of an occasional trifling gratification given to the labourer who worked well, these poor serfs received absolutely nothing for their six months' labour.

I am aware how incomplete are the above statistics as a means of instituting a comparison between the working classes of England and Russia, but at all events they will serve to show that, in some cases, the position of the Russian peasant, though greatly inferior to that of the British labourer in a social and educational point of view, is attended with a certain amount of material comfort (though without its appearance), and that the Russian labourer is even able to lay by something from his wages.

I conceive, therefore, that I am justified in assuming that the consumption of cotton per inhabitant in Russia is capable, under favourable circumstances, of being raised to the ratio of consumption in England; for the balance will be still more in favour of the Russian peasant when the results of the Act of Emancipation shall be fully developed.

It would be impossible, as it would be out of place on the present occasion, to enter upon the consideration of a question of such magnitude as that of the liberation of the serfs; but already many favourable evidences of its working are seen. Instead of hoarding up his small savings, which the rapacity of his former master often rendered necessary, little comforts and comparative luxuries are finding their way into the cottage of the peasant; he dresses better; his Sunday shirt, of the brightest red or yellow cotton, is new and clean; his wife appears in church with a new "sarafan" or tunic, and a bright cotton handkerchief for her head-dress; and his working implements and harness are of better material. Already, as I am informed on official authority (though I am not able to supply the figures), this change has altered the character of the great annual fair of Nijni Novgorod, the sale of articles of luxury formerly bought by the wealthy having greatly diminished, while the demand for every article used by the peasants has been quite unprecedented. There can be no doubt that of all manufactures, that which is likely to be most affected by the improved condition of the Russian emancipated peasant is the cotton industry; and when we consider that each of these cotton-clad agriculturists, forming as they do one-third of the whole population of Russia, will, under certain conditions of purchase and redemption, become possessor of 7½ acres of good land, and that besides these there are other classes

PALL MALL

amounting to more than 40,000,000 using cotton goods, some idea may be formed of what the cotton trade with Russia might be if her Government, foreseeing the great advantages to be derived from a free-trade policy, should boldly determine to adopt it to the widest extent. Certain it is that no country in the world, not England herself, could derive such benefit as Russia might by the adoption of such a policy, and with her enormous population, now for the first time free to satisfy its wants and able to create an adequate demand, she might safely reckon on a vast increase of her revenue by merely facilitating to the utmost the natural consumption of her many millions of inhabitants.

By the change in the condition of the people a great future is in all probability open to the cotton trade or to the cotton industry of Russia.

That industry, however, is at the present time completely at a stand-still, on account of the high price of the raw material, at the very moment when there is every reason to believe that those engaged in it might be making larger profits than any that have ever been obtained in this or in any other country.

It must surely therefore be greatly to the advantage of all concerned in this industry to ascertain the means by which they may procure a steady supply of cotton, of good quality, moderate price, and in any quantity that may be required; and it is with the view of calling attention to this subject, which is one of equal interest to British and to Russian capital and industry, that I venture to suggest the means by which, in my humble opinion, this want may be supplied.

But, before entering upon this question, it will be necessary to examine into the actual state of the cotton manufacture in Russia, at the present moment.

In a former part of this paper I mentioned that although, in accordance with ordinary calculations, all the mills in Russia ought by this time to have stopped, some are still working.

I have tried in vain to obtain later information as to the actual number of Factories still at work, but it is obvious that there are objections to answer questions on this subject.

For the same reasons some difference will appear in the estimate of spindles employed in the cotton trade in Russia as shown in the Tables No. 3 and No. 4.

There is an evident disinclination on the part of some of the persons connected with the cotton mills in Russia to allow it to be known what they are actually doing: but, taking the amount of yarn and cloth that is coming into the market as a criterion of what is doing, it is calculated that not more than one-fifth or 20 pe cent. of the mills can be at work, and even this small production is accumulating; for the stock of yarn in Moscow is said to be fully as large as in ordinary times when the mills are working full time. There is, indeed, such a complete cessation from buying either yarns or goods, that to assign anything like a reason for it is a problem for which the oldest merchants at St. Petersburgh find it difficult to give a satisfactory explanation, there being indeed no precedent for the present state of that trade in Russia. It may not be so difficult, however, to account for the fact that some of the mills are still at work notwithstanding this utter stagnation in the cotton trade. In cases, for instance, in which a spinner has bought cotton even at high prices it is no longer a matter of choice to him, he has his people to pay, and he could not sell his cotton to any of the mills that have stopped at a price that would induce them to go on again; his sacrifice would amount to the same if he sold his cotton and added to that loss the necessary expenses of shutting up his mill, only warming it to keep his machinery in order. I have been informed by the director of one of the cotton mills at St. Petersburgh which has stopped work, that it costs that firm 50,000 silver roubles per annum to do nothing, and it is estimated that it will cost for every 100,000 spindles, 1,000 silver roubles a-week for every week they stand idle. This sum is made up thus, viz., by interest on capital invested, by fuel to warm the mills, by guild and other fixed dues, by the salaries of the principal servants, such as managers, foremen, engineers, clerks, watchmen, &c., and by insurance, none of which can be dispensed with.

It is also possible that among the mills there are some which would be ruined if they stopped, these may be termed sinking ships, but they prefer to go down inch by inch. In ordinary times they may have been short of capital, and now perhaps they have none of their own left; to stop or cease work would cause those who have lent them money, or given them credit, or bought their cotton to work up into yarn or cloth, to ask for a settlement of accounts that might prove inconvenient; those mills however that continue to work on such terms are going from bad to worse, their action tends to depress the market still more, and if they once stop they will probably never start again.

There is no price at present for either yarn or cloth, and at the actual rate of exchange with the prices of cotton now current in Liverpool and London there would be a loss of 10*d.* per lb. on yarn.

This state of things is not attributable to over production, as the statistics given in the former part of this paper will show, neither can it be attributed to the prosperity of the linen trade; for, although this has improved with the depression of the cotton industry, it cannot be said as yet that flax is again taking the place of cotton; neither can it be attributed to the want of profitable employment for the operative population, for there never was a period in the history of Russia when labour was so well paid as at this moment, it being a well-known fact that labour is at present better paid at St. Petersburgh by at least 25 per cent. than it was eight years ago. The true cause for this crisis is perhaps to be found in another direction. Formerly the landed proprietors not only fed and lodged, but clothed their serfs; they were then large purchasers of manufactured goods, this they have ceased to be; and the people, the liberated serfs, have not yet got into the way of buying for themselves; this state of things however cannot go on much longer, and although the system will be completely changed, if the calico once begins to find its way on to the backs of the million, the cotton trade must begin to move again.

It is not the prices of cloth, though high, which really interfere with its sale, for the people have all more money at their disposal than they ever had before, and the price of printed calico, ten, fifteen, or twenty years ago, was dearer then than now.

It is quite true, however, that the high rate of cotton interferes with the spinner and manufacturer very seriously, for while the raw material has risen 500 per cent. to the spinner cloth is only 50 to 60 per cent. dearer. The makers of cloth cannot give a price for yarn that will pay the spinner to make it, and cloth must increase in price before the spinners can go on working again. This, however, can only be effected by an extreme scarcity. It is of no use arguing with the Russian customer about the cost of producing cloth; he has been accustomed to give so much, and he will rather go without it than give more.

It is to be hoped that the same cause may operate in the same way with regard to brandy, and that the advance that has now taken place in the excise duty and in the licences to sell brandy will diminish the consumption in a similar proportion. It has been calculated that if only one-fourth of the money spent in "votki" drinking were laid out in the purchase of calico, every mill in the country might work on full time, and every hand might be profitably employed again.

As the demand for cotton in England produced supplies from countries whose cotton-growing capabilities were barely known, so in Russia the dearth of cotton greatly increased the supplies from Asia, and particularly from Bokhara. Already during the Crimean war the importance of this trade to Russia was so evident that every encouragement was given to it, and that stimulus has produced an increase in the importation of cotton from Central Asia that has proved very seasonable in the actual crisis brought about by the American war.

The duty on the importation into Russia of raw cotton by the Eastern frontier from Bokhara, Khiva, Tashkend, and Kokan amounted in the year 1800 to 23 copecks per pood, while that on cotton yarn was fixed in 1817 at 1 silver rouble per pood.

By the Ukase of 1858, the export duty was abolished on all Russian goods exported to Bokhara and the quarantine on cotton imported from Bokhara was removed; in 1859 cotton imported into Russia from Bokhara was allowed to enter duty free. The effect of these measures was that the greater part of the Central Asiatic cotton imported into Russia was declared to be the produce of Bokhara, while all Russian exports for Central Asia were declared for Bokhara.

This refers chiefly to the exports from the Khanats of Central Asia, for although some Persian cotton finds its way to Orenburgh, this is an inferior and coarse description of cotton from Khorassan, of a short staple resembling Surat. It is conveyed by horses across the mountains of Khorassan, and thence by camels along the west coast of the Sea of Aral to Orenburg. The Khorassan cotton, which in 1860 cost only 1 silver rouble 80 copecks per pood, now costs 12 and 13 silver roubles at the place of production. Nearly the whole of the commercial transactions between Russia and Persia is in the hands of the Trans-Caucasian Commercial Company, who expect to be able next year to import into Russia raw cotton from Khorassan prepared on the American system to be delivered at Nijni-Novgorod for 24 silver roubles per pood, instead of 27 silver roubles 50 copecks, which has been the price of this cotton lately.

The finest Persian cotton is that which is grown in the Province of Mazanderan. This cotton is of a fine long staple and good colour. The whole produce of this district is exported from Balfarusch and a small neighbouring port by the steamers of the Russian Mercury and Caucasus Company. These vessels, which are seven or eight in number, ply round the south and west coasts of the Caspian, calling at every port till they reach a station off the delta of the Volga about eighty versts from Astracan, where the shoal water prevents their further progress. Here the cotton is transferred into lighters, and taken by steam-tug up to Astracan. The cost of freight from Balfarusch to the town of Astracan is 1*d.* per lb., 1 rouble (or 3*s.*) per pood of 36 lbs. Cotton was selling in the month of July last at Balfarusch at 17½ silver roubles the pood; before the American war the same cotton was only worth 2½ roubles per pood (2½*d.* per lb.) There is a considerable difference in freight on pressed or loose cotton. Pressed cotton, which formerly paid 30 copecks per pood, now costs 60 copecks, while loose packed cotton which formerly paid 50 copecks now pays 1 silver rouble, and latterly has been altogether refused by the steamers, for want of room.

The duty on Persian cotton, like that on all merchandize imported from that country, pays, according to the stipulations of the Treaty of 1828, an *ad valorem* duty of 5 per cent. Free transit being established across the Caucasus from Koti to Baku, greater facilities are now offered to trade between the Black Sea and the Caspian with Persia, and even with India by Meshed. These facilities and the price of good cotton at Balfarusch 17½*d.* per lb., may perhaps attract attention to the means of procuring cotton from this quarter; but I have unfortunately no means of calculating the expense of transport across the Caucasus and from the east coast of the Black Sea to England.

The progress of the importation of cotton into Russia from the different countries of Asia engaged in that trade, from the year 1853 to 1860 inclusive, is shown in the following Table :—

Quantities and Values of Raw Cotton Imported into Russia from various countries in Asia.

	1853.		1854.		1855.		1856.		1857.		1858.		1859.

The annexed Table contains a statement of the amount and value of cotton imported into Russia from all parts of Asia for the year 1860 :—

Cotton Imported into Russia from Asia in 1860.

	Raw.		Spun.	
	Poods.	Silver roubles.	Poods.	Silver roubles.
From Turkey	182	797	37	592
Persia	54,328	173,298	9,193	49,583
Kirghese Steppes ..	10	52	11	108
Khiva	5,608	22,354	15	75
Bokhara	168,070	689,002	4,876	32,897
Tashkend	371	1,462	345	3,445
China	1	22	—	—
Other countries . ..	..	..	1	18
	228,570	886,994	14,478	86,710
	3,673 tons.	£ 133,049	233 tons.	£ 13,007

From this it appears that the importation of raw cotton from Bokhara, which in 1853 amounted to 39,451 poods, value 171,015 silver roubles, rose in 1855 to 105,849 poods, value 468,213, silver roubles, and continued to increase, till in 1860 it reached 168,070 poods.

A Table showing the importation of cotton by the European frontiers for the same period has already been given; but in order to exemplify the effect produced by the American war on the importation of cotton into Russia by the European and Asiatic frontiers respectively, I subjoin the following Tables of the importation of raw and spun cotton into Russia during the years 1860 to 1864 inclusive:—

By European Frontiers.

	Cotton Wool.	Cotton Yarn, White.	Cotton Yarn, Dyed.
	Poods.	Poods.	Poods.
1860	2,610,590	115,598	15,302
1861	2,491,387	102,612	15,952
1862	444,731	68,419	11,150
1863	587,289	44,765	9,500
1864	629,785	60,096	3,986

By the Asiatic Frontier.

	Cotton Wool.		Spun Cotton.	
	Imported from Bokhara.	Total Importation from Asia.	From Bokhara.	Total from Asia.
	Poods.	Poods.	Poods.	Poods.
1860 – –	168,070	228,570	4,876	14,478
1861 – –	118,320	151,756	12,725	23,091
1862 – –	327,325	404,839	6,672	16,809
1863 – –	384,186	453,834	4,643	9,470

The total amount of raw cotton imported by both frontiers being—

	For 1860.	For 1863.
	Poods.	Poods.
From Europe – – –	2,610,590	629,785
Asia – – –	228,570	453,834
	2,839,160	1,083,619
	1,083,619	
	1,755,541	

Leaving 1,755,541 poods as the amount unsupplied of the normal annual demand, notwithstanding the large increase in the importation from Asia. The importation from Bokhara during the last year is reported to be 750,000 poods, or about one quarter of the yearly consumption of raw cotton by Russia.

This addition to her supply of cotton would have been a great boon to Russia had the Bokhara cotton, which has good length of staple, been properly prepared; but, owing to the wretched condition in which it arrives at the Russian market, Bokhara cotton has acquired as bad a reputation here as that which Surat cotton has obtained in England and elsewhere.

The following statement with reference to the quality and capabilities of Bokhara cotton, and the manner in which it is prepared, was read three years ago to the Imperial Geographical Society at St. Petersburgh, by Mr. G. Kühlewein, who was secretary to General Ignatieff's mission to Khiva in 1858, and who has since obligingly furnished me with further information on the same subject.

Extract from a Paper by Mr. G. Kühlewein, Secretary to General Ignatieff's Mission to Khiva in 1858, *read before the Imperial Geographical Society of Russia, February* $\frac{7}{19}$, 1862.

Substantially the cotton of Bokhara is not inferior to that of America, but in the condition in which it is brought to our markets it is not so well adapted for manufacture as the cotton brought from the New World. This is partly owing to the roguery practised by the Bokharian sellers, such for instance as making up a stolen deficiency in a bale by pouring in a certain quantity of water; partly from

the imperfect manner in which it is cleaned and packed. Mr. Dimitrieff, an author in the "Industrial Messenger" (February, 1861), says:—"Those who have to do with Bokharian cotton know what trouble and labour are sometimes required to make it up into twist, when it comes in ragged wrappers, wetted on the road, rotten at the sides, &c. It is difficult for the Bokharians to establish presses for packing the bales, but why should not the merchants of Orenburg pack the cotton over again when it reaches them? They would certainly find great advantage in it, and render good service to the manufacturers, who would willingly give a higher price for better pressed cotton."

The Russian traders in Central Asia have frequently pointed out these defects to the Bokharians, and endeavoured to persuade them to adopt a new system of cleaning and packing, but without effect. It is only since 1859 that the Bokharians have begun to devote some attention to the subject.

Cotton is grown by every one and everywhere in the Bokharian Khanat; it does not require any very good soil; it is sown generally in spring and flowers in July. It is picked towards the end of summer or the beginning of autumn. (Lehmann says the cotton is sown between the 25th March and 5th April.) It is not, however, all picked at once, as the poods do not ripen equally. Not more than two batmans* are collected at a time; the first ripe pods are picked in August, the remainder in September and October, until the night frosts put an end to the picking altogether.

The fields sown with cotton do not require the irrigation which other crops in that country demand; thus, if the spring has been rainy, the fields are not watered at all during the summer; in the contrary case, however, they are watered several times. The rains of spring will sometimes destroy the entire crop, which in ordinary seasons is watered twice a year, on being sown and after it has flowered.

The Bokharian cotton is divided into two qualities; the first is called "guziài sefid," which is the whitest and cleanest, and is used in the manufacture of calicoes and even muslins; the second quality is called "guziài miakka," and is of a reddish colour. It is principally used in the manufacture of a red cotton fabric known in Russia as kumatch, and extensively used in peasants' dresses. The texture of this is inferior to nankeen.

The seed of the cotton plant, remaining in considerable quantities over and above what is reserved for sowing, is made into oil by the Bokharians and used in their food.

The price of this cotton is very steady, and only varies to the extent of a few tengas† during the winter, when it is principally purchased for the Russian market (about 35,000 poods yearly). In return the Bokharians take 35,000 to 40,000 poods of our twist, numbers 38 and 40. The local manufacturers have even taken to use it for turbans.

Mr. Bykofski, a merchant of Moscow who visited Bokhara in 1859 and 1860, says that in the latter year a batman of cotton pods sold at the bazaar for 22 tengas (*i.e.* 4 silver roubles 40 copecks or 55 copecks per pood). A batman of pods produces—

	Tengas.
2 poods cotton, at 8½ tengas	17
4 „ seeds, at 1½ tengas	6
2 „ husks.	—
	23

There is therefore only 1 tenga per batman left for paying the expense of packing it for the market, &c., while the daily wages of a labourer are half a tenga a week, taking six working days to one batman. These two tengas are consequently made up by the Bokharian traders by the addition of water to the cleaned cotton.

In 1859 the cotton was mixed with sand and seeds; the fraud was complained of, and forbidden by the late Emir Nasr Ullàh, and the guilty were publicly exposed at the bazaar. The addition of water gives the trader a profit of 15 per cent. The oil is well adapted for machinery, and sells in Bokhara at 6 tengas per pood.

It is necessary, in order to improve the quality of Bokharian cotton—

1. To separate mechanically the cotton from the seed.
2. To pack the cotton into bales by means of presses.
3. To improve the qualities by introducing other seed.

* 1 batman equal to 8 poods; 1 pood equal to 36 lbs. English.

† 1 tenga equal to 20 copecks, equal to 7½*d*. English.

In America the cotton is separated from the seed by means of saw-gins. Three such machines, two worked by hand, the other by water, of 2-horse power, were brought to Bokhara in 1860 by Seid Maahrouf, a merchant of that city. The result was very satisfactory; the cotton was incomparably cleaner, and cost about $2\frac{1}{2}$ tengas (about 1*s.* 6*d.*) per pood cheaper. With regard to packing the cotton into bales, the same merchant, Seid Maahrouf, sent a press from Moscow as far back as 1857, but it was unfortunately burnt in a conflagration at the fortress of Orok, in the Government of Orenburg.

In the meantime they had tried packing it by means of levers and ropes, and even this method was a considerable improvement on the old system of merely packing the cotton in bags. The cotton brought to Orenburg in a pressed state was much better preserved from the effects of the journey, and less affected by damp.

The climate will permit the growth of other qualities of cotton in the Khanat of Bokhara. In 1860 some seeds of the Georgian cotton were sown, differing from the Bokharian in colour (the latter being yellow, the former of various shades). It ripened at the same time as the native plant, but the pods having opened with great rapidity, attention was not paid to gathering the cotton in proper time; hence some of it was lost. The experiment was, however, so far successful, that it afforded a quantity of new seed, which was distributed by Seid Maahrouf for sowing in 1861, and the cotton produced from it will be brought to Russia by the next caravan. The sample obtained proved in no wise inferior to American cotton.

The cotton bought last year (1861) at the bazaars of Bokhara at 9 tengas per pood (1 rouble 80 copecks), came to $5\frac{1}{4}$ silver roubles with delivery at Nijni Novgorod. In the months of September and October Bokharian cotton sold in Moscow at 7 roubles 75 copecks to 8 silver roubles per pood.

Meteorological observations and the statements of travellers and natives have proved that the climate of the country, watered by the Syr Daria (Jaxartes), a portion of which is now in the possession of Russia, does not differ in the least from that of Bokhara, and that consequently cotton may be produced there on the mere application of labour to its growth. Canals of irrigation have long existed in the vicinity of the river, and near Fort No. 1, or Kazaly, which is on the Jaxartes near the Aral Sea.

Cotton should at once be introduced into that district. The Kuvan-Daria and Yani Daria branches may be used for the purposes of irrigation, if measures are taken to keep them supplied with water, which does not appear very difficult. The want of labour may perhaps be some impediment, but there is no doubt that the Kirghese, who inhabit the Jaxartes country, and who are more or less accustomed to agriculture and a settled life, would willingly take to the cultivation of the cotton-fields, provided they were well paid.

The cultivation of madder and the mulberry-tree, and consequently the development of silk-growing on the Italian system, are equally possible. It is very desirable that these experiments should be made at once, especially with reference to the cotton plant.

The climate is favourable, although the cold in winter sometimes attains 25° of Réaumur at Fort No. 1; but the winter of 1860–61 was very severe even at Bokhara, there being 14° of frost in January, and the spring only commenced in March. At Fort No. 1 may be found grapes, apricots, and other delicate fruits growing in the open air. Cotton has already been tried there, and it grew and ripened. There is a great future in store for the country of the Jaxartes if those plants, especially cotton, are introduced. The climate is favourable, aqueducts or canals have long existed, nature and circumstances have placed a profitable branch of agriculture in our hands, and we have only to profit by such precious gifts. With the co-operation of Government we may one day see plantations of cotton and call the country Russian Bokhara.

The subject is one well deserving of attention.

A circumstance occurred last year with reference to the importation of cotton from Bokhara which is worthy of mention.

In the spring of 1862 three Italian gentlemen—Messrs. Meazza, Gavazzi, and Count Litta—passed through St. Petersburgh on their way to Bokhara, whither they were proceeding for the purpose of purchasing silkworm eggs. They were warned of the danger attending such an expedition, but trusting to the immunity

attached to the character of merchants in Central Asia, they continued their journey and reached Bokhara in safety. Here they were allowed to set up an establishment for breeding silkworms; the large sum of money which they had brought with them in gold, however, excited the suspicion and cupidity of the authorities, and one of the Italians having ventured into the bazaars, which they were forbidden to approach, they were invited the same day to dine at a house attached to the palace of the Khan. Before the conclusion of the repast, however, a wall had been built shutting off the room in which they were and a strip of the court-yard from the rest of the building and ground. Here the Italian travellers remained eighteen months in spite of the efforts made by the Emperor of Russia, the King of Italy, the Pope, the Sultan, and the Grand Mufti of Mecca to obtain their release. It was not to be expected that the Russian Government should endeavour to procure their liberation by force of arms, the result of which might have been doubtful in all except the expense and loss of life that would have attended a military expedition; but they employed for that purpose a means of coercion as simple in execution as it was effectual in its result. When the first caravan arrived last spring from Bokhara at Orenburg, it was stopped at a short distance from the town, and the merchants were informed that until the Khan had released the Italian prisoners, and until they had arrived in safety on Russian territory, not a bale of Bokharian cotton would be allowed to proceed further.

The Khan being quickly informed of this, declared that it was his intention to liberate the Italians immediately. A second caravan arrived, but as the prisoners were still detained at Bokhara this caravan was likewise stopped at Orenburg, occasioning great loss and inconvenience to the merchants, who earnestly appealed to the Khan to release the Giaours that caused them such trouble. At length the Khan, who himself was owner of half the cotton exported to Russia, finding that the Russian Government were in earnest, allowed the Italian gentlemen to depart, after a detention of eighteen months, during which time their lives were in continual danger.

One of these gentlemen, Mr. Meazza, brought away with him a slight relic of one of our murdered countrymen, in the shape of a small pill-box, with a prescription written on it, addressed to Captain Conolly, in whose handwriting were added the words "Fever pills."

Russia has at length succeeded in making the barbarians of Central Asia understand the value attached to the lives of Europeans, though not without causing considerable inconvenience to her own trade; but it is to be hoped, if ever the Khan of Bokhara should be tempted again to detain European travellers, that the mere threat on the part of Russia to apply to his trade the powerful commercial screw she now possesses will suffice to bring him to reason.

General Ignatieff, whose mission extended to Bokhara and Kokan, as well as to Khiva, told me himself that when travelling in the wake of a cotton caravan, its track might be traced by the cotton wool which had fallen from the badly-packed bales, and which looked like flakes and patches of snow on the road. It was the custom, he said, of the camel drivers when stopping on the way, to sell a pound or two of cotton when any was asked for, which they pulled by handfuls out of the bales; and, on arriving at Orenburg, to make up the missing weight by pouring in water, or by adding sand or gravel. These frauds are now practised to such an extent that, as I have been informed on good authority, the seeds and refuse from the cotton mills of Moscow are actually carried back to Orenburg and are there sold to be used in filling up the missing weight of the bales. The result of these frauds is that when opened the cotton is found to contain about 50 per cent. of seed, dirt, and refuse. One of the mill managers at St. Petersburgh showed me an entry in his note-book to the effect that the waste on some of the Bokhara cotton received at that mill was 60 per cent.; and on another occasion a merchant who had bought 4,000 poods of the same cotton at Moscow assured me that he was only able to obtain from it 9 lbs. of clean yarn from each pood of 36 lbs.

The present price of Bokhara cotton is quoted in a former part of this paper at from 18 to 25 silver roubles per pood—that is to say 18*d.* to 25*d.* sterling per lb. The cost of transport of cotton from Bokhara to Moscow is 5*d.* per lb.; this would leave respectively 13*d.* and 20*d.* sterling as the price of this cotton per lb. at Bokhara at the present date; but as 50 per cent. of the worst kind of

cotton and at least 20 per cent. of the better description received at Moscow or St. Petersburgh is waste, this increases by half the expense of the lower priced cotton, and the real prices to the spinner therefore will be for these descriptions of cotton 27*d.* and 30*d.* per lb. respectively, or 27 to 30 silver roubles per pood, which exceeds the price of Surats, and approaches within 4*d.* and 5*d.* per lb. the cotton from Pernambuco and middling Orleans. But with cotton at this price the mills in Russia cannot spin.

It appears from the above Report that, while the Bokharians equal, and even exceed the Indians in the frauds practised in the packing and conveyance of cotton, they are inferior to them in everything relating to its culture; that the employment of American seed and of improved machinery for cleaning and pressing the cotton is but little known to them, and that they are deficient in enterprize and unwilling to adopt the improvements which have now become absolutely necessary in the preparation of cotton.

This, therefore, is the condition of the trade, and this the quality of the cotton which would have to be supplanted by any fresh description of cotton that might find its way by a new route to the Russian market.

Bearing in mind that by the Earl of Clarendon's despatch of the 24th February, 1857, Her Majesty's Secretaries of Embassy and Legation are invited to offer any suggestions which they may consider likely to prove beneficial to British commerce, I venture to add some observations on the advantage that might accrue to British interests in India could a permanent market be opened in Russia, such as would induce the exportation of cotton by an overland route from India to that country. Such a trade, if it could be established, must be carried on chiefly by the inhabitants of Central Asia; it would, in fact, be an extension of the traffic already existing between Russia and Central Asia.

There are various considerations which present themselves in examining a question of this importance.

It would be necessary to show, in the first place, that such a demand exists, or is likely to arise as would justify the employment of capital in the direction suggested. This, I believe, I have already sufficiently demonstrated. Secondly, the district from whence the cotton can be obtained in sufficient quantity, and of the requisite quality and price: and thirdly, the routes and means of transport by which it can be conveyed from the cotton-producing districts in India to the cotton manufacturing districts of Russia.

In approaching a subject with which I have had so little opportunity of making myself acquainted, I must throw myself on the indulgence of those who are interested in the question for any errors into which I may fall.

Although much has been done to encourage the exportation of cotton from India by sea, I am not aware that the question of establishing an export trade in cotton from India by land into Russia has ever been mooted before. It appeared to me to be very important to obtain precise information on everything relating to this subject, and I have therefore endeavoured to obtain from India that which I could not procure in England. The works from which I have chiefly derived the facts to which I refer are Mr. Davies's Report on the trade of the North West Provinces of India, and the cotton handbooks for the Presidencies of Bombay, Bengal, and Madras, published by order of the Indian Government.

If in seeking for information I have reproduced facts that may not be new to those interested in the question of the cotton supply in England, I hope I may be excused on the ground that they are to a great extent unknown to many persons engaged in the cotton trade in Russia. I hope also to meet with indulgence if, in the course of this paper I have exceeded the limits laid down by Lord Clarendon as those of a Commercial Report.

It has been shown that, although the manufacture of cotton in Russia labours under great disadvantages, and is an industry of artificial growth unconnected with the development of the true resources of the Empire, while the protection afforded to it imposes considerable sacrifices on the consumer, this manufacture thrives, under ordinary circumstances, notwithstanding all the disadvantages to which it is subject; and, as in consequence of the encouragement given by Government to this industry a large amount of Russian capital has been invested in it, we may naturally infer that the question of an adequate supply of the raw material, upon which depends the existence or ruin of the cotton industry in Russia cannot be a matter of indifference to the Imperial Government, who no doubt would gladly

encourage the opening of a fresh source of supply, which all concerned in the manufacture of cotton in Russia would avail themselves of with avidity.

On the other hand, as the demand for the raw material not only improves with every year, but bids fair in a short period to increase to an unprecedented and unexpected amount, the question of opening a new market of 65,500,000 of inhabitants to the cotton planters of India may well be a subject worthy of consideration, especially in view of the existing condition of the cotton-growing States of America.

Both parties in the lamentable struggle now being carried on in that country appear to have believed that, in the power they possessed of withholding the supplies upon which the existence of so many millions depended, and in the necessity which would arise for procuring those supplies, they held the means of forcing England from her neutral policy and of compelling her to take such a position as would put an end to a ruinous and unprofitable war which was never intended nor calculated to reach the dimensions it has now attained. At all events it may fairly be assumed that the effect that would be produced by the dearth of cotton, not only on England but on other manufacturing countries, entered largely into the calculations of both Northern and Southern antagonists.

As long as the cotton trade remained uninterrupted, the consequences which might arise from any interference with it seemed so vast and dangerous that we were prepared to make every possible sacrifice to avert such a catastrophe; but now that it has occurred, it would seem that the greatest sufferers by it are not ourselves, but the States of America, who placed too much faith in the power of the great commercial weapon which they wielded.

How long the present state of things in America may continue is a question upon which no calculations can be based; but, even supposing the expectations of the most sanguine Federalist to be fulfilled, by the reconstitution of the American Union in its original form, the causes which have brought about this great disturbance in the cotton trade of the world would still remain, and the manufacturing countries of Europe would still incur the risk of a repetition of circumstances similar to those from which they are now suffering; the result of their dependence upon a single market for an indispensable raw material. Thanks to the foresight, and to the energetic and liberal measures adopted by the Cotton Supply Association, to which the cotton industry of the whole world is deeply indebted, this dangerous dependence no longer exists, and supplies of cotton arrive from every quarter of the globe. But independently of these various sources of supply, the commercial interests of the world seem to call for the establishment of a great permanent cotton market, the business of which shall not be liable to be suspended or annihilated by events that may again occur at the next, or at some future Presidential election in the United States of America. India has always held a place for the production of cotton, second only to that of the Southern States of America, and India would seem to be the country before all others best calculated for the permanent supply of the bulk of the demand of the cotton consumption of the world.

Notwithstanding all that has been done in India, however, for the cultivation and transport of cotton; notwithstanding the fabulous fortunes that have been made through the cotton trade in that country, the general feeling in India, as well as that of capitalists in England, seems to be that the circumstances now ruling in India are such as offer great temporary advantages; not such as may be converted into a lasting benefit for India and England. This conviction appears to arise chiefly from two considerations. Firstly, the probability that at the conclusion of the American war the cotton trade will re-assume the monopolizing character, and fall into the same convenient groove, which British and American enterprize had devised for it before the war: and secondly, the presumption that cotton can never be produced in India equal in quality and price to that of which the Southern States of the American Union have hitherto been the almost exclusive producers.

With regard to the first consideration, without hazarding any vast prediction or vague conjectures, it may be assumed, if the Government of the United States adhere to the intention, lately announced by one of its most eminent members, of pursuing the war until one side or the other succumbs through exhaustion, in either case the prospects of the cultivation of cotton in the South are such as to render very doubtful any large supply from that quarter for several years to come; and we know, from recent experience, that a market from which commerce has been

diverted even for a shorter period than the actual duration of the American war, runs the risk of never again attaining that footing which it may formerly have held in the commerce of the world.

With respect to the second consideration recent information tends to show that, although the finest description of sea island cotton has not been produced equal to that grown in South Carolina, any amount of cotton grown from American seed, equal to "Middling Orleans" (which forms the bulk of the cotton consumption) can with proper cultivation be grown in India.

That, however, which has hitherto prevented English and native merchants from investing their capital in cotton plantations is doubtless the fear that Indian cotton growers would be left in the lurch as soon as the state of affairs in America would permit of the re-establishment of the American cotton trade on its former basis. But if it can be shown that, independently of the English and other markets in Europe, another market of 65,500,000 of inhabitants, of rapidly increasing value, is to be found at the very threshhold of India, and that to establish that trade nothing is required but to employ the means of transport already existing, and which for years has proved perfectly safe and practicable, such a consideration might be an additional incentive to the extensive cultivation and the careful preparation of cotton in India. But before inquiring into the nature of the cotton and the district from whence it might be desirable to obtain a supply of cotton for Russia, it may not be without interest to consider what, in the opinion of the best authorities, are the causes which have brought that discredit upon Indian cotton under which it now labours; in order that those errors may be avoided in establishing a new market for Indian cotton.

At all times complaints have been made of the systematic neglect and fraudulent adulteration of Indian cotton; in explanation of this it is stated that the middlemen find their interest in adulterating the cotton previous to disposing of it to the exporters; the dealer finds for the unclean but cheaper cotton a better return than for the cleanly-gathered and dearer article: the cultivator finds that as ready a sale is obtained for cotton in a dirty and adulterated state as when brought to market in a clean and first-rate condition; while the difference in price between the two articles does not repay him for the additional labour required to produce it. The price even for the best cotton in the market is but little more than it is for the worst.

The following are the opinions of some of the Indian authorities on this subject:—

Mr. A. N. Shaw ascribes the evils that beset the cotton trade in India to the want of local merchants or persons deputed from large mercantile establishments to purchase cotton direct from the cultivators, instead of purchasing it through a middle agent, who advances a sum of money to the cultivator for the crop whilst on the ground, probably less than its worth. There is, therefore, no inducement to the cultivator to carefully gather the crop, and it is a matter of no importance to the middle agent. The ryots are perfectly careless as to how the crops are gathered, as "the more dirt the greater weight," and hence the disgraceful condition in which cotton appears in the market. Mr. Channing, the superintendent of cotton experiments in Belgaume, states as one of the causes of the deterioration of cotton "the practice followed by the native dealers of advancing money to the ryots on the security of their crops, at the enormous rate of interest of 37 to 38 per cent., and, on receiving the 'kuppas,' that of exacting 3 to 4 lbs. in excess to every maund of 80 lbs. delivered, by so doing taking all profit from the grower. Dr. Forbes states that even if the cultivator exerted himself to the extent expected of him the case would in no way be improved. 'Adulteration is the trade of the native broker,' and so long as he remains the medium of communication between the grower and the Bombay merchant, it is hopeless to expect that the produce of the country will arrive at the home market, let it be cultivated ever so carefully. This is the opinion of the ryots and dealers by whom the American cotton is ginned in the Bruckapoor and Seigaum districts, where a very large addition has been made to the cultivation of the New Orleans plant. The fields have been cleared of admixture with the native variety in a most satisfactory manner, and the owners stated that they were most desirous that their cotton should go to England in its pure state as produced by them, in order that it might obtain the name which they knew it deserved; but they felt it had not the most remote chance of doing so, through the cotton brokers, who would only use this carefully prepared cotton for admixture, so as to pass off their up-country inferior cottons."

Mr. Medlicott, in his handbook for Bengal, says,—"The cotton of Bengal, as well as that of every other part of India, after having been badly cultivated, carelessly picked, and injured in the cleaning, is fraudulently adulterated by the small dealers, the middlemen, and carriers, and finally the shipper has no interest in discriminating between qualities, or else no power to do so. In short, such has been the trade, that from the time the seed is dropped into the ground until the bale lies in the hold of the vessel, every one who has to do with it is either directly interested in deteriorating its quality in those respects which are of the greatest importance to the spinners who are its ultimate consumers, or at least that all have interests antagonistic in a greater or less degree to its improvement."

What happens to the cotton on the road from the place of production to the home market is thus described by Mr. Casselo:—"Cotton is exposed to every species of depreciation during its transit to Bombay, moving along at the rate of one or two miles an hour in rude carts, or on the backs of bullocks over bad roads, the dew and the dust do their worst to it. The bullocks are loaded and unloaded twice a day, generally in the neighbourhood of watering-places, and their packs are rolled in the mud or dust. Each bullock consoles himself during the march by keeping his nose in his leader's pack and steadily eating the cotton, and the loss in weight which has not been compensated by the accumulated dust of the journey is too often supplied in water at its close.

"The saving in time and deterioration by substituting railways for the present road traffic would be immense, but the natives will not abandon their old system for the simple reason that while a return freight is obtainable for carts on the line of the road no employment can be secured for carts which may carry cotton to the line of railway. A remedy for this has been proposed by suggesting that the railway companies should be permitted to sell salt wholesale at stations selected for the purpose, where salt warehouses, something on the principle of bonded warehouses, might be established. But these evils are not without remedy."

Mr. J. D. Inverarity states that what is required to uphold the improvement of cotton is the existence of free communication by means of roads through all parts of the country. Until merchants are enabled by means of roads to visit the cotton districts and create a competition by making their own purchases from the ryots, the latter must remain at the mercy of the usurious dealers, and as these look to nothing beyond their own profits, which they attempt to swell by squeezing the ryots, the introduction of any improved exotic will never be accomplished so long as the country is shut out from free intercourse with the mercantile community at large. As much of the fraud takes place after the staple has left the hands of the ryots, Mr. Inverarity suggests that the Regulations of 1829 for the punishment of such fraudulent practices should be more stringently enforced. Others, again, consider that the evil complained of will not be remedied so long as a ready sale is obtained for mixed cotton, and that it will be effectually cured only when experience has convinced the dealers that every bale of such cotton will be positively refused by the merchants interested in the trade. On some occasions, at Burkapore, contractors brought most execrable cotton, but when the collector resolutely refused to receive it they managed to provide cotton of a superior quality.

The following comparison between the respective advantages of American and Indian cotton-planting is taken from the introduction in Mr. Medlicott's work:—

"Although the American planter has the advantage of soil, for which he pays little or nothing, yet before his first crop is picked a very large outlay must be made. His ground must be cleared, his slaves and farm cattle bought, expensive agricultural implements, costly buildings and machinery provided. Interest on this money, wear and tear, food for his slaves and stock and pay of his overseers enhance so much the cost of production, that the best calculations have fixed at a minimum of $3\frac{1}{2}d.$ per lb. the actual value of the average crop before it leaves the farm, profits and cost of transport not included, a sum which in all cotton-producing districts throughout India would unquestionably leave a fair margin for an increased outlay on the amelioration of the present crop. Great facilities of transport are enjoyed by the American planter, but those facilities did not exist in anticipation of the cotton trade of the United States, but, on the contrary, steamers multiplied as a result of that trade.

The natural advantages of the American cotton fields are no doubt great, but those of many of the best cotton producing districts of the Bengal provinces are by no means contemptible; nor is it unreasonable to conjecture that should a demand

for cheap carriage ever arise here, similar to that which has produced the American river steamers, it might perhaps be as successfully met, allowance being made for special conditions in each case. The skill, energy, and hardy perseverance claimed for the American are not unknown among the British settlers in India."

The quality of cotton grown in India from American seed has been proved to be fully equal to cotton grown in America. Some cotton grown by Mr. Shaw, the Collector of Dharwar, from American seed fetched at Liverpool $6\frac{1}{4}d.$, while the native cotton was sold for $3\frac{1}{2}d.$ per lb. Cotton yarn manufactured from New Orleans' cotton at $6\frac{3}{4}d.$ per lb. and an equal quantity of Mr. Shaw's cotton at $6\frac{1}{2}d.$ produced 3 per cent. more yarn than the American cotton, and the yarn was of better quality.

This cotton was referred to in a debate on the Cotton Supply in the House of Commons in the month of June 1862. The comparative result of the spinning of New Orleans' cotton and that grown at Dharwar is as follows:—

	Produce.		Loss.		Per-centage of Loss.
50 lbs. ordinary New Orleans cotton, worth $6\frac{3}{4}d.$ per lb.:—	lbs.	ozs.	lbs.	ozs.	
When willowed – – –	47	8	2	8	$17\frac{1}{2}$ per cent.
When blown and lapped – –	45	6	2	2	
When carded and spun – – –	41	4	4	2	
50 lbs. Dharwar grown New Orleans cotton, worth $6\frac{1}{2}d.$ per lb.:—					
When willowed – – –	48	12	1	4	15 per cent.
When blown and lapped – –	47	1	1	11	
When carded and spun – – –	42	8	4	9	

In the opinion of Mr. Crawfurd, cotton such as can be procured in unlimited quantities from India is well suited to 75 per cent. of Manchester manufactures. Mr. Chapman states that cotton fit for the English mills can be obtained to any extent from India of such quality that it can be used for more than 50 per cent., at certain relative prices which he considers to average 15 per cent. less for the Indian than the American commodity.

With regard to the effect of irrigation on the indigenous cotton of India, Mr. Balston, who has seen much of the country, stated to the Colonization Committee "that the effect of irrigation on the cotton plant of India is to raise it from a small stunted annual, producing 50 to 60 lbs. of clean cotton per acre, to a large perennial plant, producing 400 to 500 lbs., equal to anything grown in America; it improves the quality of the cotton, and brings it up to the standard of the American crop. Water never fails to lengthen the staple of Indian cotton."

The next point to be considered is the district from which it would be most advantageous to procure a supply of cotton for Russia. As this cotton must be conveyed by the land route, the district must be sought as near the frontier as possible; the Punjaub, for instance, if a cotton-growing country, would be the natural and most favourable position for such a source of supply. On referring to Mr. Medlicott's Handbook for Bengal, I find several statements with reference to the quality of native grown cotton and cotton grown from American seed in the Jullundur Doab and the Punjaub.

In January 1847 Dr. Sill reported as follows on the cotton cultivation of the Jullundur Doab (the district between the Ganges and the Jumna).

The flourishing aspect of the crops when he saw them in 1846 left no room to doubt that the soil is in an eminent degree adapted to the plant; it differs entirely from the cotton soil of Bundlecund, and great facilities exist for irrigation, which render the plant independent of the season. Cotton fields are found in every part of the district, save only on land subject to inundation. The average produce is stated to be $207\frac{1}{2}$ lbs. of clean cotton per acre on irrigated land, and 168 lbs. without irrigation.

Dr. Sill considers these figures as understating the actual produce. He says the landholders feared there might be a tax imposed on the produce, and returned less than the true amount of their crops. In the Byrowal and Umritsur districts he had good reason to believe that the crops ranged from 264 lbs. to 306 lbs., and in Deenanuggur they even exceeded the latter amount. Dr. Sill describes the quality of the fibre of this cotton to be fine, long, and silky; it is, he believes, somewhat

deficient in strength, a defect which he considers remediable by care in cultivation. The fibre separates readily from the seed. As to the proportion of the weight of the wool to that of the seed, he makes the following comparison between cotton grown on one of the experimental plantations, American cotton grown in Bundlecund, and the indigenous cotton of the Jullundur Doab:—

Native cotton, grown on the Broach experimental farm	–	–	–	Wool,	22¼	per cent. of gross produce.			
A better quality	–	–	–	–	–	–	„	28	„ „
American cotton grown in Bundelcund	–	–	–	„	33	„	„		
Indigenous cotton of Jullundur Doab	–	–	–	„	30	„	„		

He considers the soil very well suited to cotton, and the district as capable of producing very large quantities.

Mr. J. Prinsep, writing from Ballata in June 1853, states that he had distributed exotic seed from the Agricultural Society among the landholders of his district. The people, he adds, always admire the exotic cotton, and he believes that it will be extensively introduced into cultivation. The opinion of the Cotton Committee on some American cotton raised by Mr. Prinsep from seed acclimated at Sealcote was that the colour, length, strength of fibre and feel to the touch are excellent; that it is descended apparently from the green seed or short-stapled variety, either Petti Gulf or New Orleans, and is a good useful cotton for the European markets, worth 4½*d.* to 5*d.* per lb.

In March 1861 the Financial Commissioner of the Punjaub, under the instructions from the Lieutenant-Governor, issued a circular to the revenue officers of the province, requesting information on the question of the cotton-producing capabilities of their respective districts. These are some of the facts elicited by that inquiry.

In the Delhi division the districts of Goorgaon and Kurnal send their cotton down the river to Mirzapore, but the Delhi district exports large quantities into Rohilhund.

In the Hissar division there are two crops, one sown in April and May, and gathered in October and November, the other sown in July and gathered later than the first; some of the cotton of the Rohtuk district is sent into the Punjaub, some down the river.

In Hooshyapoor the crop is left standing two years, in the second season the quantity is small but the quality is considered very superior.

From the Umritsur division the cotton grown in Sealkote is sent to Mooltan, the Salt Range and Jummoo; that grown in Goordaspore, to Lahore: the officer in charge of this last district states that the indigenous cotton plant is dwarfish and weak, but the New Orleans kind takes favourably to the climate. At Goordaspore there are some plants five years old which yield cotton every year, they merely require the earth to be loosened about the roots and to be watered; the seed is valued by the people, and those who possess it are jealous about giving any to others; when well cultivated this cotton has not deteriorated in quality, and in proper vigour it produces close on eight maus the acre. From Goorjiranwalla the cotton is sent to Sind, the Salt Range, and Peshawur; from Lahore into the adjoining districts.

Excellent cotton was grown in the district of Shahpoor from American seed in 1851, samples of the produce submitted to cotton spinners in Manchester were pronounced to be little inferior to American grown cotton.

The cotton of the Rawul Pindee district is taken across the Sutlej to Peshawur and Kohat, that grown in Goojirat to Cashmere and the Salt Range; and the crop of the Shahpoor district to Cabul, to Jhung, and Mooltan.

The soil of the Jhung district is stated to be well suited to cotton, irrigation alone is needed; the whole of the Bâr might grow cotton, and the Chenab river offers peculiar facilities for sending the produce down to Kurachee and Bombay.

In the Dejarat division, the Bumoo and the Dera Ishmael Khan sow their cotton in March and April; and Dera Ghazee Khan in May and June, and the crop is gathered from September to December; in the two former districts the plant is frequently allowed to stand for two, and sometimes three years, and the second year's crop is best, both as regards quantity and quality.

In the Peshawur division cotton is sown from April to June, and picked from September to December; as a rule the plant is an annual. In Kohat the frost sets in too early and is too severe in the district ever to become a good growing country,

and there is nearly as much brought into Kohat as is taken out of it; the export of the whole division goes into Affghanistan.

The Commissioner notices the experiments made at Delhi by Mr. Berkeley and at Umritsur by Mr. Cope: he thinks that "there cannot be well a shadow of doubt in the minds of those who know India, that the Punjaub is capable of producing cotton of almost any degree of excellence, and to an amount fully sufficient to supply the whole of Europe;" and he adds, "I have no hesitation, however, in stating my conviction that the Punjaub can never compete with other parts of India as a cotton-exporting country, notwithstanding its great advantages in the matter of water-carriage."

But this observation evidently applies to the Punjaub as an exporting country to Europe by the seaboard. Notwithstanding the excellent quality of its cotton, and the enormous amount it is capable of producing, it is without a market, on account of its great distance from Bombay or Kurrachee, which increases its price to such an extent as to render its sale at the ports of export an impossibility. It would therefore be an incalculable advantage to the Punjaub to find a market of 65,500,000 of inhabitants on its northern frontier; and equally so to Russia to find within reach a country capable of supplying to any amount cotton of the best and most useful description.

It is now necessary to consider whether the cotton of the Punjaub can be sent by land to Russia as cheaply or cheaper than sea-borne American or Surat cottons; or than the Bokhara cotton which now reaches Russia by the land route. This question resolves itself into two parts; firstly, the cost of producing the cotton; and secondly, the cost of transport. With reference to the first consideration, I may best explain it by quoting the following statement in a letter addressed to the "Times" on the 11th of January, 1865, which corroborates information that I had already received on this subject from India.

"If I may be allowed to say a word in favour of India, I know of no reason why (except the want of irrigation) that country should not produce cotton as good as the Egyptian. Scinde, which is as much like Egypt as one florin is like another, has, by means of well-irrigation and European skill, produced cotton quite equal in quality, according to the report of the Bombay Chamber of Commerce, to anything produced in Egypt, and there is enough of waste land, waste labour, and waste water in the countries drained by the Indus, to produce several millions of bales. As to the quantity of waste land, the following figures are from official sources:—

	Total area in Acres.	Cultivated.
Punjaub – – –	47,062,400	14,470,185
Scinde – – –	40,703,360	1,672,229

Of the population of these countries the following is the last official return:—

Punjaub, and native States connected with it (the former by Census of 1855–56)	14,766,825
Native States – – – – – – – – –	7,154,538
Scinde – – – – – – – – –	2,500,000
	24,421,363

Of the great amount of waste labour in this population some idea may be formed from the fact that the total exports from the Indus for the year ending April 1863, amounted to 3,287,594*l.* only, or something less than 3*s.* per head of population, one half of which was entirely due to the high price of cotton.

The quantity of water running waste is 51,500 cubic feet per second when the river is at the lowest, which quantity, if it never were greater, would be equal to the irrigation of 9,270,000 acres throughout the year.

As to the cost of irrigated cotton, I stated in a former letter that Scinde might be irrigated by means of high level canals at a capital cost of 3*l.* 10*s.* per acre. This is the estimate formed from ample data by one of our first hydraulic engineers. A charge of 25*s.* an acre for the water would give the canal owners 37½ per cent. net. At this charge for water the cost of good cotton would be as under:—

	£	*s.*	*d.*
Land tax, per acre – – – – – – – –	0	3	7
Water rate – – – – – – – – –	1	5	0
Labour and seed – – – – – – – –	1	5	0
Total – – – – – – – –	2	13	7

Produce 400 lbs., or a fraction over 1¾*d.* per lb.

I have no means of ascertaining what would be the expense of cleaning and pressing cotton in the Punjaub. I hear, however, that there are hydraulic presses in the country, one being near the frontier at Attock. If this trade is ever established its success will depend upon the certainty that every bale despatched to Russia will be carefully cleaned and pressed. A firm that should succeed in obtaining such a reputation for its cotton would drive all other cotton out of the market.

It must be observed that the charge of 25*s.* per acre, the expense of making high level canals for irrigation, is one that may be dispensed with in many parts of the Punjaub, in which case the cost of production would be less than 1*d.* per lb.

We have seen it stated, on the authority of Mr. Medlicott, that the sum of $3\frac{1}{2}d.$ per lb. would, in all cotton-growing districts throughout India, leave a fair margin for an increased outlay in ameliorations.

Taking therefore $1\frac{1}{2}d.$ as the cost of produce per lb., and adding 2*d.* per lb. as the cost of cleaning and pressing, this would bring the Punjaub cotton to $3\frac{1}{2}d.$ when ready for transport. The carriage of cotton to Peshawur from the chief cotton-producing districts of the Punjaub would not be more than one-sixth of a penny per lb., as I have been informed by an English gentleman residing in that country.

The cost of carriage from Peshawur to Bokhara is stated in Mr. Davies' work to be, for 5 maunds (400 lbs.) 41 rupees, 4*l.* 2*s.*, or about $2\frac{1}{2}d.$ per lb.; the cost of transport from Bokhara to Moscow is 5*d.* per lb.

The following may therefore be taken as the cost of production and conveyance of a pound of cotton from the Punjaub to Moscow:—

	d.	
Cost of produce, cleaning, and pressing	$3\frac{1}{2}$	per lb.
Carriage to Peshawur	$\frac{1}{6}$	„
„ Peshawur to Bokhara	$2\frac{1}{2}$	„
„ Bokhara to Moscow	5	„
For irrigated cotton	$11\frac{1}{6}$	„

for cotton grown without irrigation say 10*d.* per lb., to which must be added the import duty on entering Bokhara of $2\frac{1}{2}$ per cent. or 5 per cent. *ad valorem*, according to the religion of the trader.

The millowners and overseers at St. Petersburgh, to whom I have spoken on the possibility of obtaining cotton by land from India have assured me that if it could be procured at even 15*d.* per lb. there would be a large and continuous demand for it.

One single circumstance has been mentioned which will double the consumption of cotton in Russia, the necessity of spinning yarns of a coarser description for heavier cloth—viz., numbers 14 to 20 instead of as at present 30 to 40. The same amount of machinery now used will require a supply of 4,000,000 poods, instead of 2,000,000 per annum.

The loss to Russia by the mills standing idle has been calculated at 1,000 silver roubles per week for every 100,000 spindles in the country; this, for 1,700,000 spindles, would be a loss of 884,000 silver roubles per annum.

But the purchase of only one year's supply at the present price of cotton would amount to 60,000,000 silver roubles (which the cotton-spinners and weavers could afford to lay out, if each head of the population were or would be customers to the extent of 6*s.* each).

The cost of 2,000,000 poods of Punjaub cotton at 10*d.* per lb., or 10 silver roubles per pood, would be 20,000,000 silver roubles. Taking therefore, as above, the cost of one year's supply at present price of cotton at 60,000,000 silver roubles, and 20,000,000 silver roubles as cost of 2,000,000 poods of Punjaub cotton, 40,000,000 silver roubles would represent the saving to Russia per annum, could she obtain her cotton supply from the Punjaub at that rate; and double that amount if the consumption increases to 4,000,000 poods.

The value of such a trade to the cotton grower in the Punjaub may be thus estimated: 2,000,000 poods equal 72,000,000 lbs., which at $1\frac{1}{2}d.$ per lb. would give 450,000*l.* for cost of produce; 600,000*l.* cleaning and pressing at 2*d.* per lb.; 50,000*l.* carriage to Peshawur; or 1,100,000*l.* as the yearly value to the Punjaub of the cotton supply of Russia at 2,000,000 poods per annum, or double that amount at 4,000,000 poods.

The total annual exports from India by the Peshawur passes were valued, according to Mr. Davies, at 120,643*l.* in the year 1862.

The facilities for transport through the Punjaub have been greatly increased by the establishment of railways. The whole line from Umritsur to Mooltan, a distance of 252 miles in length, will be opened for traffic next month; this will give an immense stimulus to the trade of the Punjaub, especially when it is found that goods and produce can be conveyed with safety and rapidity to and from Kurrachee. The discovery of excellent coal near Pud Dadnu Khan, connected with the Salt range between the Jhelum and the Indus, has led to a suggestion that the Punjaub line should be extended to Peshawur and the Khyber Pass, with a branch line of from 20 to 30 miles leading to the colliery, which would then be available for fuel over the whole of the lines.

With respect to the routes by which the cotton of the Punjaub should be conveyed to Russia, I have already pointed out that such a traffic would in reality be nothing more than an extension or development of the route by which commerce has long found its way—not only from Russia to Bokhara, but from Russia to India.

Some idea may be formed of the extent to which this trade is already carried on, from the following list of articles, mostly Russian, found in the bazaar of Cabool, and brought to it from Bokhara:—

Ducats, tillas, silver roubles (3 equal to 1 tilla) called sours.
Yamoos (silver ingots in the form of boats, from China).
Gold dust.
Pistols and muskets.
Gun-locks.
Padlocks.
Wires of iron and brass.
*Copper.
Russian boxes and snuff-boxes.
Needles.
Glass, spectacles, mirrors.
*Beads and coral.
Fish-bone.
Paper.
Tea.
Kimsan (a kind of leather).
Kirmez (cochineal).
Blue stone, or sulphate of copper.
Iron trays.
*Kulabutoon (gold-wire for embroidery, a purely Russian staple, unequalled by any other country)
*Simgote, flat gold lace.
Chintz of all kinds.
Velvet.
Satin.
Koodbaft (silk cloth, in imitation of shawls).
Shirja (coloured cotton, like nankeen).
Kaitan (muslin made of Russian flax).
*Nanka (strong nankeen cloth, Russian, at 1*s.* per yard).
White cloth.
Handkerchiefs.
Chuppun-i-kard (a ready-made woollen garment from Russia).
Silk of Bokhara and Koondooz.

The articles marked (*) are sent on to India.

The articles above enumerated give an outline of the imports to Cabool from Russia, but Cabool sends a still greater quantity of merchandize for consumption to Turkistan and Russia, for which the returns are made partly in gold and partly in goods.

As I have given in a former paper very detailed information respecting the roads from the Russian frontier to Bokhara, it will only be necessary for me now to give itineraries from Central Asia to India.

The following extract is taken from Mr. Nebolsine's work:—

"The two principal roads from Central Asia into India are—

"1. From Khiva up the Amu Daria to Bokhara, and thence to Balkh and over the Hindu-Kush to Cabool.

"2. From Khiva or Bokhara to Herat,

"The latter route is the most frequented; the road to Cabool over the Hindu Kush being only passable by caravans three months in the year.* Herat is, therefore, the key to India from the north, and the importance of its position cannot be too highly estimated."

* Mr. Nebolsine is mistaken in this statement. Mr. Davies, Secretary to the Government of the Punjaub, states in his Report, that the road from Cabool to Peshawur is practicable throughout the year; but caravans seldom travel in January and February, when the portion between Jigdilik and Cabool is covered with snow. Further on, the only portion closed by snow during winter for three months, is that between Cabool and Bamian; the road throughout is now generally safe. Time taken by caravans from Peshawur to Cabool, twelve to fifteen days; from Cabool and Bukhara, twenty-five to thirty days.

The following is a Russian itinerary to Herat:—

	Days.	
Bokhara to Karshi – – –	4	Between Bokhara and Meylmunj only camels employed. Rate 10*s.* 9*d.* to 12*s.* per camel.
Hodjasami, passage over the Aum	4	
Akcha – – –	3	
Shibargan (near Andkho) –	1	
Khirabad – – –	2	
Kafyr-Kala – – –	2	
Meiman (Meylmunj) – – –	1	
Ambar – – – –	1	Between Meylmunj and Kaleúoú the rates are 9*s.* to 9*s.* 7*d.* per camel; and 6*s.* to 7*s.* 2*d.* per mule. Camels and mules employed at about 3*s.* between Herat and Kaleúoú.
Kaisar – – – –	1	
Charshambi – – –	1	
Kalavali – – – –	1	
Margaf – – – –	2	
Kaleúoú – – – –	2	
Herat – – – – –	2	
	27	

Another Route.

Bokhara to Karki, where the Aum is crossed – – – – – –	6
Andkhoi – – – – – – – – – – –	3
Kafyr-Kala – – – – – – – – – – –	2

And thence by the route given above in 22 days, with laden camels.

Third Route.

	Days.		Days.
Bokhara to Karakul – – –	1	Kallabaran – – – – –	1
Bank of Aum – – – –	1	Imam – – – – –	1
Chardjui (Chaorjee, or Chardjoo) – –	1	Sarabazy – – – – –	1
Rapatak (or Robitukh) a well with good water –	1	Pamidé – – – – –	1
Nazimar, sandy soil, forage scarce, good well –	1	Muri – – – – –	1
Amornchukal, a well with good water –	1	Chamanibet – – – –	1
Mero or Mara, many good wells – –	2	Karatana – – – – –	1
Bank of Mero river, where there is a Khivan village recently built; duty levied here on caravans; boats for goods – –	1	Sarchemsha – – – –	1
		Hodjamalal – – – –	1
Beyond this the road passes through a country where forage and water abound, viz.:—		Hodjravat – – – – –	1
		Herat – – – – –	1
Asjatman – – – –	1	By this route camels perform the journey in 24 days.	
Kazikli – – – –	1		

From Kandahar to Herat goods are conveyed on camels and horses. The former performed the journey in 15 to 20 days, the rate being about 27*s.*; pack-horses may be hired at the same expense. But twice or three times these rates will be paid for speed or delivery on term. Pack-horses are almost exclusively used in transporting goods from Bokhara to Cabool. The following is the route taken:—

	Days.	
Bokhara to Karshi, across a desert; wells with water; country near Bokhara and Karshi; cultivated and populous	4	
Kilif, through a sandy desert, wt water (brackish) only in wells	4	
Balkh	5	Balkh to Cabool, at 18*s.* to 24*s.* per horse, may be reached in 12 days.
Mazari	2	
Kholoom or Tush-Kurgan	2	
Aibak	2	
Kaminat (through Segan, Horan, and Sarbaz) ..	3	Bokhara to Kholoom, 18*s.* per horse.
Baivan or Baiman	2	
Saglisha	2	
Cabool	1	
Total days by caravan from Bokhara to Cabul ..	27	

Another Route from Bokhara to Balkh.

	Days.	Miles.
Bokhara, by steppe to Karshi	3	93½
Bank of Amu-Daria	4	120
Hence caravans may adopt either of the following courses:—		
1. Ascend the Aum to any point in boats.		
2. Having crossed the Aum take the direct road to Balkh, without passing any village, but across the steppe and sands.		
3. From Aum passage to Akché village, by the steppe ..	2	43½
Miglik, small town of	1½	20
Balkh	1	33
Total	11½	310
By direct road	..	280

If unnecessary delay be avoided on the road, goods may be sent direct to Cabool in 22 to 25 days, at a transit rate of 30*s.* to 36*s.* per horse. By the route viâ Karshi, Kilif Akché, Kholum and Bamian (leaving Miglik and Balkh to the right), goods may reach Cabool in about 20 days at a cost of 30*s.* to 36*s.* per horse. British merchandize sent to Central Asia viâ Persia, proceeds from Meshed in 5 or 6 days to Seraks; thence in 4 days to Mero; from Mero to Chaorjee in 8 days, whence to Karakul in 3 days.

From Karakul, Bokhara is reached in 1 to 2 days. The entire journey from Meshid to Bokhara is performed in 22 days at a cost of about 36*s.* per camel.

Merchandize carried from Bokhara beyond the Hindu-Kush, or to other places in Central Asia, are said to be subject to the following duties on imports:— Andkho, 1*s.* 2*d.* to 1*s.* 9½*d.* per camel; Maylmŭnj, 1*s*, 2*d.* to 1*s.* 9½*d.*; Kalenów, about 3*s.*; Herat, Kandahar, Dera-Ghazee Khan, Multan and Peshawur, 2½ per cent. *ad valorem*, without distinction of creed. At Cabool, Mahometans pay 2½ per cent., and other creeds 5 per cent. *ad valorem*. It may be objected that difficulties might arise to the transport of Indian cotton through Bokhara to Russia, since such a traffic might interfere with the speculations in cotton of the Khan of Bokhara himself; but it would not only be contrary to the commercial habit of that country (in which mercantile transactions enjoy an almost sacred character) to throw obstacles in the way of the transit trade, but equally contrary to the Khan's own interests, since the duty levied by him of 2½ per cent. and 5 per cent. *ad valorem* on such a large importation of cotton would be an addition to his revenue which he could ill afford to lose.

Should, however, such difficulties arise, there are other routes, as has been seen above, that would be equally available for the traffic to Russia. Such, for instance, would be the route from Cabool by Balkh to Kilif and Chardjoo on the Amu Daria (Oxus), through Khiva and along the east shore of the Sea of Aral to Orenburg; or, avoiding Khanats of Central Asia altogether, by Cabool, Balkh, Sibberghan, Maimene, Herat, Meshed and Astrabad to the Caspian, and up the Volga to Nijni Novgorod. Or the southern passes into Affghanistan might be chosen, either from Cabool to Ghuznee and Candahar, and thence to Herat and Meshed, or by Dera Ishmael Khan to Ghuznee, Candahar and Meshed.

The latest and most complete information respecting the route from Balkh to Asterabad, by Maimene and the Derbend Pass, to Herat and Meshed, is to be found in the very interesting volume of travels in Central Asia by the enterprising Hungarian traveller, M. Vámbéry, whose work contains the most complete and accurate map of that portion of Central Asia as yet published.

It remains for me to notice the objections that may be taken to the proposed line of communication between India and Russia, viz., the difficulty of communication by the passes of the Hindu-Kush, and the danger to which commerce is said to be exposed on this route from brigandage.

With regard to the depredations of the Afredi robbers infesting the Peshawur passes, these are said of late years to have greatly diminished. Still, something remains to be done, and that, no doubt, will be effected by the beneficial action of the trade itself. Brigandage, which invariably flies before the march of mercantile enterprise, shuns the great highways of commerce, and those who now live by levying black mail on the caravans may find it more to their advantage to share in the legitimate profits of such a traffic by providing camels or meeting in other ways the requirements of the trade.

The opinion that the difficulties which the passage of the Hindu-Kush present are insurmountable obstacles to such a trade are sufficiently controverted by the extracts from Mr. Davies' work which I am about to give, as well as by the fact that the commerce between Russia and India is actually carried on by this route.

The following observations taken from Mr. Davies' work on the trade and resources of the north-western boundary of India will show that the proposed route is one that may prove of great advantage to other branches of trade than that of cotton:—

"The countries and people beyond the mountain boundary of India are for the most part still in the nomad state of society, though occasionally large towns are to be found. Though isolated by chains of mountains and deserts from nations more advanced in civilisation, much energy is exhibited in overcoming these obstacles to intercourse. The camels of the Affghan traders, called povindahs,

wending their way towards Kurrachee or Benares, laden with the carpets of Herat or the fruits of Kandahar; the kafilahs or caravans crossing the Hindu-Kush with silk from Bokhara; the thousands of cattle driven towards the Siberian frontier by the Kirghis; the tea sent from China overland to Russia; the Karaja Kushes following over the Karakorum pass; their ponies bringing goods from Yarkand; the hillmen of Bushaihr descending the precipitous paths of the Sutlej with their sheep carrying shawl wool—are all so many instances of the trading spirit of these mountain tribes. The Povindahs alone employ 9,400 men and 35,000 camels in the trade with India. Between Kandahar and Herat, Bukara and Kabul the Kharaotis ply with extensive caravans. The trade through the passes leading to Peshawur has of late years greatly increased, the exports being valued at 120,643*l.*, and the imports at 156,513*l.* English cotton piece goods have to a great extent displaced those forwarded through Russia in the Bokhara and neighbouring markets. Tea sent by Peshawur competes advantageously with that sent by the overland route from China. The sugar from the Punjaub is one of the most profitable exports.

"The routes to Kabul and Bokhara are by the Khyber, Tatra, and Ab Kama passes, which unite at Dakha in the Jalabad district. The distance is about 193 miles to Kabul and about 829 miles to Bokhara by the Banican route, being forty days' journey. The road from Peshawur to Kabul is fit for camels throughout, and possesses the great advantage of being practicable throughout the year; but caravans seldom travel in the months of January and February. Between Kabul and Khulu the highest passes are Hajigak (11,700 feet), Kalu, and Dundau Shikau. In traversing these provisions must be carried. This portion of the Hindu-Kush is entirely destitute of trees. Camels and ponies are used in the summer. On this route caravans enjoy a fair degree of security. Several members of the Ameer's family are personally engaged in the trade, and the authorized duties are not excessive, though the exactions of minor officials swell the nominal rate. The broad cloths and nankeens of Russia still hold their ground in the markets of Bokhara. The iron, copper, furs, and other articles which come on to Kabul are also in great demand."

The following advice of Khanikoff addressed to Russian traders is equally applicable to the exporters of British goods to Central Asia:—"What our traders should avoid most assiduously is not to be over-anxious about the cheapness of their merchandize, to the detriment of the solidity of its texture and colours; for although the low price of a merchandize may in the beginning attract a great number of purchasers, its want of durability will not fail in the long run to cool their ardour. Manufacturers who work chiefly for the markets of Central Asia must also study more diligently the prevailing tastes of the Asiatics. Thus, for instance, muslin turbans with gold borders at both ends, as they are manufactured with us, are more sought after than muslins brought from other quarters. The muslins from Glasgow, for example, which have birds represented in them, cannot be used by Mussulmans in making their 'namaz,' for they represent the figure of a living creature."

In comparing the trade of Affghanistan and Turkistan, and that of Cashmere with Umritsur, Mr. Davies mentions that on the Cashmere road, between Rampur and Spiti, the paths are so precipitous that sheep, being more sure-footed than larger beasts, are commonly used to carry burthens of from 16 to 20 lbs.; and, notwithstanding the greater distance of the Affghanistan route from Umritsur, the balance is in its favour, the trade with Umritsur by way of Kabul being valued at 235,253*l.*, and that with the Maharajah's territory at 211,555*l.*

It has been frequently debated whether British India can compete with Russia in trading with the countries of Central Asia. Time has already begun to solve the question. Although the Volga, the Caspian, the Aral, and the Oxus afford great facilities, the trade with Bokhara is still carried on by means of caravans to Orenburg and other frontier towns. The journey occupies from forty-five to sixty days, and twenty-eight days more to Nijni Novgorod. From Peshawur to Bokhara is a journey of forty-five days, and from Peshawur to Kurrachee, taking boat at Attok, 1,107 miles, or, proceeding by land as far as Mooltan, 1,188 miles. An increasing amount of British and Indian goods is annually exported to Affghanistan and Bokhara. A preference has been obtained for English cotton stuffs, but except the broad cloth known as "Banati Rum" (Turkish cloth), which is sent by way of Constantinople to the port of Rasht on the Caspian, and thence to Meshed, none from England reaches Bokhara. It is possible

that the quality of the cloth sent to India is inferior, as it is otherwise difficult to account for its exclusion. Still, it may be concluded that, whether in point of distance or of price, our trade has the advantage over that of Russia.

The route from Bokhara to Orenburg is certainly not less difficult than that from Bokhara to Peshawur. It is described as crossing successively the Battak-Kum, the Kizil-Kum, and the Kara-Kum deserts, each from 90 to 170 miles broad, and wherein pasture and drinking water are only found at long intervals. It also crosses the Mugujar Mountains. On the other hand, the route to Peshawur is generally through a well-watered and cultivated country, the laborious passage of the Hindu Kush being the main difficulty. With respect to the internal communications in British territory, Mr. Davies says, the observation of Burnes still holds good. "the trade is *by* the Indus not *on* it." Although steamers have been running between Kurrachee and Misenkote for the last twenty years, by far the greater amount of goods still goes on camels. This is partly on account of the camels being owned by the merchant, and in a less degree on account of the delays and uncertainties of the navigation. Steamers are, however, about to run on the Upper Indus between Mithenkote and Kalabagh; from thence country-boats will continue the line of water-carriage to Attock and Pubbeh, within 14 miles of Peshawur. The difficulties of navigation have suggested the expediency of constructing a tramway between Kotree and Moultan. The distance is about 350 miles, and the expense of such a project would be considerable; but were it consummated the tramway would immensely enhance the utility of the railroad from Kurrachee to Kotra and from Mooltan to Lahore and Umritsur, the former of which is completed and the latter in course of construction. The distance from Lahore to Peshawur is 280 miles; the outlay on the road has already exceeded 1,000,000*l.* sterling, and in 1863 it will be completely metalled. The importance of this road is increased by the very great impediments which prevent the successful navigation by steamers of the shallow and obstructed channel of the Jhelum River. When finished this road will greatly facilitate the trade between Umritsur and Peshawur, and its steady increase may be predicted. A further increase will be imparted by the construction of a railway between Umritsur and Delhi, which is about to be commenced. So far as the Affghan trade is concerned, every possible effort is being made to improve the communications both by land and water from Peshawur to Calcutta and Kurrachee, nor is the trade impeded to any great extent by fiscal exactions. The Peshawur trade is carried on by resident firms at Umritsur, Lahore, Peshawur, Cabool, and Bokhara, and by the trading tribe of Parachas of Affghanistan, Turkistan, and Peshawur. Such a trade is capable of any amount of expansion, and it is evident that a fair, conveniently established, would tend to facilitate the exchange. To these men time is important, as every march by which their route is decreased lessens their expenses, and if the space to be traversed can be sufficiently reduced it would be possible to make two trips instead of one. In the Peshawur route all the elements of an increasing traffic exist. We are near the markets we wish to supply, large trading communities are met with all along the route, containing the capitalists and traders whose dealings we wish to facilitate, and the circumstances of the traffic render a decrease of distance all important. The chief traders agree in thinking that Peshawur itself is the most suitable locality for such a fair, as the agencies established there afford facilities for mercantile transactions which a place of less note would not afford; the fair would attract the traders of Bajour, Sirat, Hazara, and Cashmere, and the tribes of the Upper Indus and the Cabool River would bring some kinds of merchandize from Jalalabad and Decca on the rafts now used for that purpose, to within six miles of the fair. Such a fair has been established for some years at Kurachee, and there is reason to believe that it has quickened the development of traffic, though it has not secured the concourse of traders at one time. Fairs have been long established in Russia; that at Nijni Novgorod is known throughout Asia. The commercial transactions of the fair at Isbit amounted in one year to more than 2,000,000*l.*

The people who send merchandize to these fairs are those who also purchase the commodities exported from India. If they attend fairs in Russia it may be assumed that they will attend fairs in India, which may be approached in a shorter time and by less difficult routes. Familiar with the institution, they probably require only to be made acquainted with its existence, the locality in which it is established, and the kind of merchandize for sale. Information of this nature may easily be disseminated with the aid of the chiefs of Cabool and Khokand, and such a fair

might not be without beneficial effects on the character of the tribes on the frontier. But one precaution must be observed; unless the fair be well supplied with the merchandize in demand, great disappointment and dissatisfaction will ensue, and it may hereafter be difficult to procure the attendance of traders from Central Asia. It is also possible that, with the assistance of the Ameer Dost Mahomed, the Commissioner of Peshawur may be able to provide for the safety of the route through the Khyber Pass, which would be of the greatest advantage.

The following extract, also taken from Mr. Davies' Report, gives the opinion of Mr. P. B. Lord on the prospects of trade with Turkistan in reference to the contemplated establishment of an annual fair on the Indus.

"The following are some of the goods which it would be most profitable to send to such a fair:—

"Broad-cloths command a ready sale and good price. Those that reach Bokhara are all of an inferior description, but a better quality would fetch a proportionally higher price, and in Bokhara especially would meet with an extensive demand. The best colours are scarlet, sky and garter-blue, and bottle-green; dark blue is disliked, a drab is worn by the graver sort of persons, and a very bright yellow is much worn by those who have a taste for something gaudy. This colour is also chosen for saddle-cloths.

"Chintzes and other piece goods already come in quantities from India; of course with water-carriage at our command there can be no difficulty in supplying such goods at a much cheaper rate than when, as at present, they have reached Turkistan, either from Bombay viâ Palu, or from Calcutta viâ Umritsur. Under such circumstances a large increase in the sale of our cotton may be looked for. The stronger fabrics, nankeens, fustians, &c., come chiefly from Russia. This demand might be supplied at the Indus fair, and the prices show that even allowing the 30 per cent. which, according to M. de Meyendorff, the Bokhara merchant requires, the speculation will still be advantageous. Fustians with watered or damasked patterns, similar to what are seen on furniture moreens in England, are in request, and should form part of an investment. Striped patterns are also in good request.

"The silks of Bokhara next merit attention. It might seem hazardous to attempt a competition in silk manufacture with a silk-growing and silk-manufacturing country, but the well-known instance of our cotton fabrics underselling those of India in the Indian market shows the project to be not only feasible but profitable. All the silks of Bokhara contain a mixture of cotton, and so should any that may be sent to rival them. Substance is particularly looked for, and flimsy articles would not sell. Handkerchiefs are an article of great consumption; the native fabrics are most wretched, and are woven so narrow that the requisite size can only be obtained by stitching breadths together.

"In the article of hardware, cast-iron pots are in great and constant demand. There is no reason why this trade should not fall into our hands, as the freight of a ton of iron goods from England to the mouth of the Indus is considerably less than the hire of a camel to bring a quarter of a ton from Orenburg to Bokhara. On the same grounds bar iron, steel, copper, and tin would all be purchased from us as soon as the mart is opened. Razors, penknives, and scissors in moderate quantities would form a tolerably good investment; but the high prices (in proportion to their quality) at which they have hitherto been sold has prevented the habit of using them from being established. It would be necessary, therefore, to avoid glutting the market at once. The best knives to send would be those with many blades; small scissors are preferred; common razors, if neatly done up in morocco cases, would take.

"Common glass and china-ware, under the same restrictions would be found to answer. The china-ware should be rather bowls than cups; the glass, green and white bottles, with small common mirrors. In Bokhara, cast and cut glass is highly esteemed, and would fetch a good price.

"Tea is an article in great request amongst the whole nation, and its consumption is only limited by the means of procuring it. The whole supply is at present brought by caravans from Kashgar and Yarkand over most difficult roads, a journey of twenty-five days to Bokhara, and the greater part of it is inferior to Indian tea. Competition is fairly invited here, and as the taste for tea is not confined to the Uzbecks, it would doubtless extend to the Affghans were the article placed within their reach. The establishment of a fair on the Indus would doubtless be the

commencement of a considerable increase to the already enormous tea trade of India. One general remark may be added before leaving this subject. Bokhara is much more advanced in luxury than the comparatively rude Uzbeck States surrounding it, and her merchants, from long access to the Russian fairs, have become fully acquainted with European articles of the best quality, the taste for which they have to a certain extent introduced amongst their countrymen. In preparing an assortment for the Indus mart this should always be held in view, and while the general supply for the country should be of the coarse and substantial nature above indicated, a stock of what is more rare and costly will be required for the capital."

In a former Report I have entered so fully into the details of this trade that it is unnecessary for me to pursue the subject further, but the following list extracted by Mr. Davies from Mr. Atkinson's work, will show at a glance the nature of the articles required by the Kirghis.

List of principal articles in demand among the Kirghis :—

Plain calicoes.
Printed calicoes of particular patterns, vivid colouring, and highly glazed.
Good silks are obtained from China; but a common kind might sell.
Velveteens are much in request.
Long shawls for girdles are greatly valued; the Paisley shawls would be highly prized.
Woollen cloth of a bright scarlet, light blue, yellow and green, would find a market; but none of a sombre hue could be sold.
Red and green baize.
Handkerchiefs, Turkey red.
Ribbons in one shade of either red, blue, yellow, or green.
Fringes.
Sewing cotton, white and red.
Thread.
Gilt, glass, and fancy buttons.
Imitation pearls.
Coral beads are highly valued.
Imitation coral beads.
Glass beads, crimson and yellow.
Birmingham trinkets, such as ear-rings, rings, and bracelets.
Cheap watches.
Small looking-glasses.
Knives, large and small.
Scissors, large and moderate.
Needles of various sizes.
Thimbles, brass and steel.
Padlocks.
Axes.
Stirrup-irons.
Sabres.*
Guns, single-barrel.*
Rifles.*
Pistols.*
Gunpowder and shot.*
Percussion-caps.*
Tea; that from the Himalaya would supersede brick tea, if brought in cheap.
Loaf sugar; that brought from Russia is sold at 3*s.* 2*d.* per lb.
Rice, common, which is brought from Kokan, is sold at 6*d.* per lb. If this article could be obtained cheaper great quantities would be consumed.
Tobacco and snuff.
Opium.

* Russia will not supply any of these articles. A few bad rifles are brought from Persia, with matchlocks.

"The route by Cabool is practicable for laden camels throughout, and after crossing the Oxus for carts; those called arabah are drawn by horses, and are the common carriage of the country.

"The duties payable between Peshawur and Bokhara amount to 10 rupees per camel load. At Bokhara no duty is levied on exports; the duty at Cabool, Bokhara, and Kokan, on imports sold at those places is $2\frac{1}{2}$ per cent. *ad valorem.*

"In Bokhara, however, a difference is made with reference to the creed of the merchants. The usual duty of $2\frac{1}{2}$ per cent. is levied on Mahometans, 5 per cent. from Hindoos and Jews, and new merchandize from Russia is charged 10 per cent. the first year, and 5 per cent. afterwards. The above are fixed duties, but in some places the local Governors exact small presents in kind from the caravans in transit."

The difficulties of the passage of the Hindoo Kush have been so much exaggerated that the mere mention of the name is quite sufficient to cause any proposal for establishing a more extended trade between the frontiers of Russia and British India by that route to be considered visionary and impossible; nor can one be surprised at this when we find even in a work of such general accuracy as that of Mr. Nebolsine a statement to the effect that the road to Cabool over the Hindoo Kush is only passable by caravans three months in the year; the fact being that the only portion of the road closed by snow during the winter for three months (January, February, and March,) is that between Cabool and Bamian. It is therefore of the utmost importance that the fullest and most accurate information should be obtained on this subject, since it may have an important bearing on the question of establishing a great and beneficial trade between the two countries. I have therefore no hesitation in turning once more to Mr. Davies's interesting Report, which contains the most detailed account of the routes between Peshawur

and Bokhara that has yet been published. The description of these routes, though of the briefest description, may also prove interesting and useful to other than commercial travellers, since it shows that the country through which these passes run contains some of the grandest scenery in the world.

Caravan routes from Peshawur to Kabul, and from thence to Bokhara:—

(A.) By the Hajigah pass and Bamian.
(B.) By the Koushan or Hindu-Kush pass.

(A.)—Caravan route from Peshawur to Cabool by the Kaibar, the Tatra, and Abkana passes, and thence to Bokhara by Bamian.

By the Kaibar Pass, from Peshawur to Dhakka Kalan.

No.	Names of Places.	Estimated Distance.		Remarks.
		Kos.	Miles.	
	From Peshawur (1,068 feet above the sea) to	..	..	Road in a plain open country.
1	Jamrod (1,670 feet above the sea) ..	9½	15½	A village at the foot of the Kaibar pass inhabited by Koki Khail Afridis. A stream.
2	Garhi Lalabeg ..	12	20	In the Kaibar pass which commences at Kadam (1,670 feet) near Jamrod, and terminates within 1 kos of Dakka Kalàn. Road in parts, but level. The village of Ali Masjid (2,433 feet) where the pass is rather narrow, is passed on the road about 8 kos from Jamrod. There is a spring of water at Ali Masjid. Garhi Lalabeg is a small village inhabited by Zakhá Khail Afridis. A tank. The easy ascent of Shádibaghiár is passed about 4 kos from Jamrod.
3	Dhakká Kalán .. (1,404 feet)	8½	13	Beyond the pass. The Kotul Landi Khana, about 2 kos from Garhi Lálábeg. An easy ascent is crossed. Summit of the pass, 3,373 feet. Dakká Kulán is a large village on the right bank of the Kabul River inhabited by Momands. Lálpoora, the seat of the Momand Chief Suadut Khan, is about a mile on the left bank.
		19	48	Measured distance.
				The Kaibar pass is inhabited by the following Affighan tribes:— 1. Koki-Kail, as far as Ali Masjid; 2. Malikdin-Khail, as far as 2 kos from Ali Masjid; 3. Lakka-Khail, as far as Lálábeg and Shipola near L lábeg. These 3 tribes are Afridis. 4. Shanwari as far as Haftchah, 3 kos from Landikhana. 5. Momands, as far as Dakka Khalan, under Sadat Khan of Lálpoora. All the 5 tribes are independent of each other under the control of their respective Khans.

By the Tatra Pass, from Peshawur to Dakka Khalan.

	From Peshawur to			
1	Spersang	8	..	Plain open country in the Peshawur district.
2	Shalman Khurd ..	18	..	On the road the three following villages:—Mardardhand, about 4 kos from Spersang; water from spring. Jawara Miana, about 7 kos from Spersang; water from spring. Tatra, about 12 kos from Spersang; water from spring. The road from Mardardhand lies through a steep mountainous difficult country, the Tatra mountains, inhabited by the Mullaghori tribe of Affghans (subject to the Momands), who are a brave set of people, at enmity with the Afridis of the Kaiber pass. Shalmán Khurd is a small village inhabited by Momands (Dilkhakhial), a stream, and spring of water.
3	Dhakká Kurd ..	7	..	Shalman Kálan, a small village of Momands (Shah Mansaukhail), at the foot of the Tatra mountains, 2 kos from Shalmun Khurd, is passed on the road. Dhakka Kurd, a small village of Momands (Morchekhail), on the right bank of the Kabul River.
4	Dhakká Kalán ..	2	..	Road hilly along the right bank of the river. See No. 3 of the route by the Kaibar pass.
		35	..	Approximate distance.

By the Abkhana Pass.

No.	Names of Places.	Estimated Distance		Remarks.
		Kos.	Miles.	
1	From Peshawur to Michni	8	..	The River Kabul or Landa is crossed near Michni. Road in a plain open country. Michni is in the Peshawur district, a fort and a village on the left bank of the River Kabul.
2	Haidar Khan ..	7	..	A small village inhabited by Momands (Shah Mansurkail). A stream. Road in the hills. Steep ascent and descent. Pakham, a small village lies on the road 3 kos from Michni.
3	Shalman Kalán ..	8	..	River Kabul crossed again on the road (which lies throughout in the hills), at a place called Abkama or Gatto Guzar, about 4 kos from Haidar Khan. The stream in summer (May, June, July, and August) is swollen and rapid, and being confined here to a narrow passage in the hills, it is hazardous to cross it during that season, either by boat or "Jalas" (rafts of inflated skins), hence caravans prefer to traverse the Tatra route, though a much more harassing and difficult one than the Abkhana, in those months in particular. In other months of the year, boats or "Jalas" always ply on the river at this point. Shalmán Kalán is the same village as given above under the Tatra pass.
4	Dhakka Khurd ..	7	..	Same as No. 3 of the Tatra route. Gradual descent for 2 kos.
5	Dhakka Khan ..	2	.	See No. 3 of the Kaibar pass.
		32	..	(Approximate distance.)
	Basaul (1,509 feet) ..	5½	9	Road good, in a level plain, excepting an easy ascent one kos after proceeding from Dhakka, called the Chhota or Khurd Khaibar. Básaul, a large habitation on the right bank of the river Kabul. Girdi Sirkana, a large village containing about 200 houses, midway on the road between Dhakka Kalán and Básaul. Hazárnan, another large habitation, about a mile from Básaul on the road.
	Barikao, *alias* Idga .. (1,822 feet)	7	11¾	Road in a level plain. Barikao, a small village inhabited by Tajaks ("Degan"), and surrounded by a mud wall, a well, a tank, and a stream; but water and shade scanty, hence caravans sometimes put up at "Chardihi," four large villages inhabited by Toiwals, viz., Ghaziabad, Saidabad, Mainabad, Mishwani, which lie near the river Kabul, about a mile to the right bank of the road, at a short distance from Barikao.
	Samarkail, *alias* Alibaghán (1,911 feet)	8	14	A small village inhabited by Samar Khail (Afghan), on the right bank of the Kabul river. A spring of water. About a kos from Barikao a narrow pass (dry), called the Chorgali, commences; it extends between two low ridges for about 3 kos. Road in the pass good and level, but gravelly in part.
	Jalálabád, on the right bank of the River Kabul (1,964 feet)	4½	7	Road in a plain. First 3 miles stony, then sandy. A small town. Seat of a provincial Hakim.
	Bálábágh	9½	16	Road in a plain. A large village with a bazaar, inhabited by Degans (Tajaks). A small village, Charbagh, about 5 kos from Jalálabád on the road.
	Nimlabágh	9¾	16	Road in a defile, slight ascents and descents. The village of Fatiabad (3,098 feet), an old staging place, 3 kos from Balabagh, on the road. Nimlabágh, a village with mud wall. An old garden laid out by the Delhi emperors, still kept up by the Amér, in a valley (the Nimla).
	Jigdilik (5,375 feet) ..	11½	19½	Following villages on the road:—Gandamak (4,618 feet), 3 kos from Nimlabágh, inhabited by Khumganis (Afghan) Valley. Ashpan, 5 kos from Nimlabágh. Plain. Hisarak, 8 kos from Nimlabágh. The "Surkhab" stream is passed between Ashpan and Hisarak. Plain. The road then enters a defile with steep ascent and descent for about 2 kos till Jigdilik, a small village of Ghilsai Afghans (who inhabit the country between Ashpan and Kabul). A staging place. A stream. The country is inhabited by the Jubbar Khail tribe.
	Katta Sang.. ..	4¾	7½	A large village. A contracted defile or gorge called the Puree Duree pass, for 3½ miles on the road it is only 6 feet wide in one place, with almost perpendicular cliffs on both sides. Jigdilik to the Khurd Kabul pass, a distance of 42 miles, there is a succession of very difficult passes and defiles.

No.	Names of Places.	Estimated Distance. Kos.	Miles.	Remarks.
	Khak i Tezin ..	8	13½	Road over stones along the bed of a mountain stream, which is dry except during rains. Khaki Tezin, a small village in a valley, 6,481 feet.
	Butkhák (6,247 feet)..	13¼	22	Leaving Tezin, the road gradually ascends circuitously over the Haft Kotul, or seven passes; for half a mile thence to the village of Khurd Kabul the road is level; beyond which commences the Tungi i Khurd Kabul, a narrow defile which extends for about 4 kos, and in which the road winds along the course of a stream (Khurd Kabul river), which is crossed twenty-three times. Butkák, a large village 3 kos beyond the defile lies in the valley of Kabul. There is another road from Khak i Tezin to Butkhák by the Sokta Chinar Darra, or pass, which is preferred during severe winter and rains, to the Khurd Kabul pass, being dry throughout. The village of Khurd Kabul is 12 miles from Tezin, 7,466 feet.
	Kabul (city) .. (6,396 feet)	6	9	Road in a plain. The river Kabul is crossed on a pukka bridge, about midway. The bridge is called Pooti-Bagrami. The adjacent village is also called by that name. The Loghur river is also crossed.
	Total ..	116	193	measured distance.
	From Kabul to Bukhara, by Bamian.			
	Kila Kazi	7	12	A small village.
	Rustam Kail, *alias* Kolashro	10	16	Valley of the Kabul river, not above a mile in breadth, fertile. Argandi, a village on the road, about 6 kos from Kila Kazi.
	Sar-i-Chasma ..	16	20	Road in a valley. Sar-i-Chashma, a spring of water, one of the sources of the Kabul river. A place of pilgrimage sacred to Ali. The villages of Jalrez and Tukana are passed on the road.
	Gardan-i-diwar ..	15	25	Quitting Sar-i-Chashma, the pass of Unai (an easy pass, so much so that a mail cart might be drawn over it), and the plain of Urt are passed. The latter though undulating and hilly is an elevated table land of about 6 miles broad, dividing the waters of Kabul from those of Herat and Kandahar. It runs at an elevation of 9,000 feet. Along the north face of this table land runs the Hilmand river, which rises at a place called Fazindaz, in the neighbouring mountains of Paghman. The pass is baout 11,000 feet high.
	Kalú	16	27	Guljatni, a hamlet of the Huzaras, about 13 miles from Gardan-i-diwar, on the southern side of the Hajigak pass, is reached up the valley of the Abisihai, a feeder of the Hilmand. The Kotal or pass of the Hajigak, the most westerly of all the passes that conduct over the Hindu Kush range from Kabul into Turkistan, is then crossed. its top is 11,700 feet above the sea, and it is the highest of all the seven passes* that intervene on the route between Kabul and Khulm by Bamian. Three roads lead over this ridge, and all of them have been passed by artillery. The centre road is from its superior height named after the ridge (Hajigak), The one north of it is termed Arak, and that on the south Pusht-i-Hajigak. The roads by Arak and Hajigak are open to kafilas (caravans) for ten months in the year. During the months of March and April the glassy nature of the road caused by the partial melting of the snow during the day being frozen again overnight, renders it very dangerous. Pusht-i-Hajigak is a better road than either, but can only be traversed by Kafilas in July, August, and September. Hajigak is geographically remarkable as dividing the waters of Afghanistán from those of Turkistan. South of this pass, which is passable to laden camels and horses, the streams join the Hilmand, and those on its northern side the Oxus. Kalu is a Hazara village in a narrow valley bearing the same name beyond Hajigak. The winter in this valley, lying between two highest passes (the Hajigak and the Kalu) is severe.

* These are—

1. Ispihak, in the district of Rustum Khail.
2. Unai, between Sar-i-chashma and Gardandiwar.
3. Hajigak, between Gardandiwar and Kalu.
4. Kalu, between Kalu and Bamian.
5. Akrabad, between Bamian and Akrabad.
6. Dandanshikan, between Saighan and Kamard.
7. Karatal, between Kamard and Doab.

No.	Names of Places.	Estimated Distance. Kos.	Miles.	Remarks.
	Bámián	15	25	The Kotul Kalu, or Punjipilan, which commences near Kalu, is passed on the road. It is a steep difficult pass, but passable to laden camels and horses. Ascent and descent all the way to Bamian, the descent is gradual and easier. The pass is 1,000 feet higher than that of "Hajigak." Bamian, a town in a valley, celebrated for its colossal idols and innumerable excavations, called "Sumach," which are to be seen in all parts of the valley for about 8 miles, and form the residence of the greater part of the population. The village of Topchi, midway on the Bamiam stream.
	Akrabad	14	23	Five or six kos from Bamian the Kotul, or pass Akrabad, 11,200 feet above the sea, is crossed. It is open to wheel carriages of every description. The village of Akrabad is in a valley. On the wayside is a remarkable stone known by the name of Juring-juringa. It is a cube of 8 feet, and of green colour; it rings like bell metal. Surkhdur, a fort on the road, about 3 kos from Akrabad.
	Saighan	14	23	Road in a Dava (valley); fertile, well cultivated plain. Between Rustam-Khail and Saighan there are no orchards. Here, for the first time, the mountains open a little. Sokhta Chinar, a fort on the road, about midway.
	Kamard or Gaddi Sahibzada	12	20	The Kotul-i-Dundan Shikan, or "Teeth-breaker," is crossed on the road. The road up and down the north face of the pass is very difficult. This pass, from the shelving nature of the earth that forms it, is easier passed by camels than any other animal. The valley of Kamard, which supplies a large body of water to the Koodooz river, is more capacious than that of Saighan, its orchards more extensive, and its capabilities of cultivation far higher. The width of the plain rarely exceeds 400 yards, and is walled in by grand perpendicular mountains that rise 1000 feet above the plain.
	Doab	18	30	Road in the valley. An easy pass (Kava Kotul) is crossed on the road. A small village. Two forts. From the Kava Kotul, a journey of about 95 miles further on before the mountains are cleared. The villages of Parjinbagh, Bajgah, and Madar, are passed on the road. Madar is midway.
	Roi	12	20	In the defile of the Khulm river, a large village, like Doab.
	Khurram	12	20	In a narrow mountain glen forming the valley of the Khulm river; fertile.
	Sar-i-bagh	8	..	Ditto. Full of orchards.
	Haibak (about 4,000 feet high)	12	..	Ditto. Fertile. Near Haibak the glen becomes so narrow that it is called "Dara-i-Zindan," or Valley of the Dungeon, and so high are the rocks that the sun is excluded from some parts of it in mid-day. Haibak, a large village with a fort. The village of Sarkunda, about midway on the road.
	Hazrat Sultán ..	10	..	Ditto. Ghaznigik, another village and staging place on the road, about 8 kos distant from Haibak.
	Khulm or Tashkurghau	12	..	A town in a plain (Maidan of Turkestan).
				A stream, the Khulm river. Caravansurais. The town of Kunduz is about 46 kos, or 70 miles distant from Khulm, N.E. The following villages are on the road: Ghaznigik, about 3 kos from Hazrat Sultan. Syad, about 2 kos from Ghaznigik.
	Mazari Shariff, or Shar-i-Mardan	20	..	Road in a plain. The Kotul Abdu, an easy low pass is crossed on the road. A tribe called the "Laka" (Uzbeks of Kolab) sometimes infest the road and plunder the caravans. Mazar is a small towu, in which there is a building consecrated to the memory of Hazrat Ali, held in great reverence by the people. "Kila-i-Serkari" or "Kila-i-non," about midway on the road.
	Takhtapúl	5	..	A large town, containing about 10,000 houses newly built by Sirdar Mohammed Afzal Khan (son of Amir Dost Mohamad Khan), Hakim of Balkh. Plain open country.
	Balkh	5	..	Formerly a very large town, now a small town, having about 1,000 houses. The country is watered by numerous aqueducts; rich country.
	Manlik	12	..	Road in a Maidan plain. A village.
	Turkman Kila ..	12	..	Ditto. Country registan (sandy desert). No water on the road. A small village.
	Bank of the Da-riai-ámún (Amu-daria, or Oxus)	15	..	Registan, a small village. Boundary of the Balkh territory.
	Ispintoda	15	..	Ditto. Across the River Oxus in the Bukawa territory. No habitation. A staging ground. No grass. No water on the road.

No.	Names of Places.	Estimated Distance. Kos.	Miles.	Remarks.
	Shorkudak	15	..	Registan, a small village. Brackish wells.
	Kirkinjak	15	..	Ditto. A spring of brackish water. Kizkuduk (or maidens well), a staging place on the road.
	Karshi	15	..	A large town. Seat of local Government. Road in Registan. Karshi has several Caravanserais. A straggling town a mile long. A fort. Shursubz stream passes north of Karshi.
	Khoja Mobárik .. ($6\frac{1}{2}$ farsukhs)	19	..	A caravanserai. Registan. Karsan, a village 12 miles from Karshi on the road.
	Karawal .. .. ($5\frac{1}{2}$ farsukhs)	16	..	Registan. A small Baoli or spring of water. An old Saria.
	Karao Muma Jargate . (2 farsukhs)	6	..	Environs of the city of Bukhara.
	Bukhara .. .. (3 farsukhs)	9	..	City.
	From Kabul to Bukhara	382		
	From Peshawur to Kabul by the Khyber Pass	116		
	Total distance from Peshawur to Bukhara by Kabul and Bamian	498	829	

NOTE.—The road from Karshi to Bukhara has been taken from Khanikoff's Bukhara, who remarks: "The road as far as Karaul goes along a flat gravelly steppe suited for wheel carriages. Close to this spot low sandy hillocks approach the road, and only terminate near the ruins of Muma Jurghate, in the neighbourhood of which place are marble quarries and limestone pits, the produce of which is carried to Bukhara."

The distance between Kabul and Khurram is 161 kos, or 268 miles. This portion of the road was surveyed by Lieutenant J. Wood, attached to the Kabul Mission in 1837, and the protracted distance given by him, not including the windings of the road is 200 miles, or 120 kos. 64 miles (34 kos), or about a third, have been added to make the distance as approximate as possible. Estimated distance between Khurum and Bukhara is 221 kos, or 368 miles. The measured distance from Peshawur to Kabul by the Khaibar pass according to Quarter-Master-General's route is 116 kos, or 193 miles.

The above route has been compiled from the accounts published in the printed reports and papers of the mission in Afghanistan (1839), as well as from information gathered from native merchants of note. At that time, and up to a late period, the Khaibar pass, which is the easiest and the shortest of the three routes from Peshawur was infested by the Afridis, who from time immemorial have been professional robbers. But Mr. Davies states at the conclusion of his remarks on this route, "that the road throughout is now generally safe."

The time taken by Caravans in travelling between Peshawur and Kabul, is from 12 to 15 days. Between Kabul and Bukhara, 25 to 30 days.

The hire of a camel carrying over 5 maunds (400 lbs.) from Peshawur to Bokhara is as follows:—

		Rupees.
Peshawur to Kabul	11 marches	18
Cabul to Balkh	23 „	14
Balk to Bokhama.	11 „	9 6
	45 marches.	Rupees 41 6

Or at 2*s.* the rupee, about 4*l.* 2*s.* per camel.

(B.)—Kabul to Bukhara by the Hindu Kush Pass.

Names of Places.	Estimated Distance. Kos.	Miles.	Remarks.
From Kabul to			
Aksarai	11	18	A small town in the Damaw-i-koh (mountain skirt).
Chárakár	10	18	A small town in the Damaw-i-koh, at the foot of the Hindu Kush range. The mart of the trade passing into Turkistan by the passes of the Hindu Kush. Caravans take provisions irom this place to carry with them for their journey over the Hindu Kush.
The Koushau, or Hindu Kush Pass—			Major R. Leech, Bombay Engineers, thus describes the Koushau pass:—"There are three entrances to the Gorband and Koushau pass; the nearest crosses over the Kohistan and leads direct to the fort of Sakhi Khan; the second passes close by Opian (the Synds of this place are good guides in travelling through the passes), and crosses over the Kohistan, joining the principal road at a tower called Tawakka. It is steep, narrow, and with difficulty passable to camels. Its length is 6 miles. The principal entrance to the pass in which the stream runs commences at a village called Tutan Darabala, 6 miles from Charakar, and is joined by the second after $3\frac{1}{2}$ miles; at the distance of 3 miles branches off the pass of Salalang, this entrance is difficult on aeconnt of the breadth, rapidity, and rocky bed of the stream. Near Tutan Darabala several canals are carried off from the stream, and the safest way of entering the pass from that village is to ford these canals and the stream itself below where these are discharged, and to keep the road over the hill on the north side of the river, as far as the entrance of the Salalang; one quarter of a mile beyond the junction of the second and principal entrance is a footpath leading to the right to the Salalang pass. Thence to the fort of Sakki Khan is 2 miles. At a quarter of a mile on a rivulet discharges itself from a place called Ashwa, inhabited by Synds. A quarter of a mile further is a place called Soktar Chinar (the withered plane tree). Thence 2 miles is the Fort of Synd Mulla Khan. Thence Dahn-i-Koushau (mouth of the pass), 1 mile. Here the Koushau pass leading to Turkistan direct, and the Gorband pass leading *vid* Bamian join. Thence a stream discharges itself from the Dava (defile), $2\frac{1}{2}$ miles. From this place Koushau-i-bala is $2\frac{1}{4}$ miles. This last portion assumes a difficult aspect from that hitherto described, which was along the bed of the pass, and at every 200 yards across the bed of the river, whereas this is along the side of a hill. From this place to Koushau, a staging place, is $1\frac{1}{4}$ miles. Thence the road turns direct north. From this turning to the fort of Sher Kai, 3 miles. Between this and Kata Sang (a large stone), $11\frac{1}{4}$ miles. From Kata Sang, whence the principal range is apparent, to Khúni Maidan (not a plain as the name implies), $2\frac{1}{2}$ miles. Pass open for $3\frac{1}{4}$ miles. Thence the top of the pass is $1\frac{1}{4}$ miles; steep, winding, and slippery when the snow freezes on the ground. N.B.—The rest of the pass is put down from information furnished by a man who has spent his life in crossing and recrossing the range.) Thence the first stage is "Karataz" (at the same distance as Sherkai, though not so difficult), 20 miles. Thence Dosakh, 10 miles, where brushwood is first found. Thence Gorsakhtar, 7 miles. A jungle where Hazara shepherds come in the spring to pasture their flocks. Thence Khinjan, 16 miles, through gardens. Hence there are three roads, the right to Anderab, the middle one to Kunigar and Kalagai, over a mountain pass. The left taking a turn along the river coming from Anderab, leads also to Kalagai and Kunduz. With the exception of the men of the Koushau, who are Tajaks, the whole male inhabitants from the Koh-i-Daman to the top of the pass are Shauwaris by caste. On the Turkistan side of the pass, to Khinjan, the inhabitants are Hazaras. No provisions procurable on the road over the mountains.

The following observations are taken from a Minute on Mr. Davies' Report by the Honourable Sir Robert Montgomery, Lieutenant-Governor of the Punjab.

"The natural channels of trade between Affghanistan, Persia, Western Turkistan, and India are the Passes of the Sulimani range and those leading to Peshawur. These are as follows:—

"1. The Mulla Pass, near Gandava, in the Khelati hills, level throughout, safe, and one that may be traversed in all seasons.

"2. The Bolan Pass, leading through Shikapoor to Sakkur, on the Indus, through which the trade of Affghanistan passes from Candahar into Sinde, a distance of 400 miles. The road is generally level, and the trade through it is valued at 50,000*l.* per annum.

"3. The Ghulwaira or Guleri Pass, opposite Dera Ishmael Khan. This, though somewhat unsafe, is the chief trade route between Affghanistan and the Punjab; the trade through it is estimated at 294,000*l.* per annum, and is in the hands of hereditary clans of merchants called Povindahs.

"4. The Tartara and Abkhana Passes, leading from Cabul to Peshawur. These are practicable all the year, and are at present tolerably secure; and the trade through them, which is on the increase, is valued at 277,150*l.* per annum. Through these Passes lies the route from Bukhara, which is distant 829 miles, or from 40 to 45 days' journey by the Hajigak Pass of the Bamian range—the route usually preferred—and somewhat less by the Passes of the Hindu Kush.

"It may be interesting to remark that the bulk of the trade flowing from India through the Peshawur Passes is said to come *viâ* Delhi and Umritsur, and not more than one-fifth part *viâ* Kurachee and the Indus.

"The difficulties to contend with in the Central Asian trade are great, partly arising from the social and political state of the nations through which the trade passes, and the physical difficulties of the countries which it has to traverse. The nations are for the most part in a semi-civilized state on the border-land, as it were of nomad and settled life, bigoted adherents of the Mahometan religion, and inaccessible to European influence; and as for physical difficulties, every skein of Bokhara silk sold in the market of Umritsur has to traverse a distance of upwards of 1,000 miles over unbridged rivers, and seven mountain-passes, one of them 11,700 feet above the level of the sea; every piece of English calico exposed in the bazaar at Yaokand has to perform a journey of at least 525 miles from the Punjab, over Passes of 11,300, 12,570, 13,446 feet in height to Leh, and thence over still loftier mountains, and through an inhospitable route, infested by robbers, for 575 miles more.

"But on the other hand, to combat those difficulties, we find in existence an indomitable mercantile energy—an energy which, albeit in Oriental fashion, crystallized, as it were, and made hereditary in certain cases—as the Babis of South Affghanistan, the Povindahs of the Goleri Pass, the Parachas of Turkistan, the Keryakashes of Yarkand—is almost unsurpassed. Year after year their caravans stream into the Punjab from Mashed, Cabool, Bokhara, Yarkand, bringing tales of perils overcome; year after year the native ballads bewail the hardships of the travelling merchant, but they still stream on. It remains to be seen how far we can assist these adventurous traders.

"With regard to the traders from the West, little can be done to diminish either the moral or the physical difficulties until they have emerged into British territory. Here something can be done, and has been done, by the abolition of transit duties and the improvement of communications.

"Steamers now run weekly between Mooltan and Kurachee, and a steam-flotilla has just been started for the navigation of the Punjab rivers; thus placing England in water-communication within 100 miles of Peshawur, and still nearer the Passes enumerated above. A metalled road is being constructed between Peshawur and Umritsur, whence a railroad will shortly run to Mooltan and the Indus, and another to Delhi, which in a few years will be in direct railway communication with Calcutta. Now it is proposed to establish an annual fair at Peshawur for the interchange of commodities at the extremity of our frontier.

"The following observations, though not written in the commercial interest, and in a sense anything but friendly to England, will serve to show the facilities which exist for caravan traffic on the roads between Affghanistan, Herat, Meshed, and the Caspian.

In an interesting work published at Paris in 1860 by M. Ferrier, a French officer who was formerly in the service of the Shah of Persia, several observations are made with regard to the possibility of improving the communications between Central Asia and the Indian frontier.

He quotes Sir A. Burnes, to show that boats may be procured for conveying troops up the River Oxus, and concludes his extract with the following passage from Burnes' Travels into Bokhara, vol. ii, p. 197:—"The advantages of the Oxus in a political and commercial point of view must be regarded as very great; the many facilities already enumerated point out this river either as a canal for merchandize or the route of a military expedition. Nor is it only from the features of the river itself that such a conclusion is formed; it is to be remembered that its banks are peopled and cultivated. The Oxus must therefore be regarded as a river which is navigable, and possessing great facilities for improving the extent of that navigation. This is a fact of great political and commercial importance, whether a hostile nation may turn it to the gratification of ambition, or a friendly power here seek for extension and improvement of its trade. In either case the Oxus presents many fair prospects, since it holds the most direct course and connects, with the exception of a narrow desert, the natives of Europe with the remote regions of Central Asia."

M. Ferrier observes that the movements of an army proceeding through this country need not depend upon the means of navigation upon the Oxus; it might march along the banks of the river to Kouloon, or quit the river at Chaorjie, in order to reach Merv by the Desert, and thus descend to Herat along the fertile and well-peopled banks of the Mourghâb. No serious obstacle would interfere with its march, for the Desert between the Oxus and Merv is far from offering insurmountable obstacles, as the Khans of Khiva and Bokhara have repeatedly proved by their almost yearly attempts to take possession of Merv at the head of from 10,000 to 12,000 horsemen. Wherever it is not possible to follow the course of the Oxus the river may be left for a distance of 5 or 6 farsangs, with the certainty of finding sufficient water for the troops in numerous wells dug for the use of cattle. Wells of this description can also be dug in a short time with little trouble, water being met with nearly everywhere at a depth of from 3 to 4 metres, and the soil being flinty offers little resistance. Tamarisk brushwood is met with almost throughout the steppes; and during the winter, and especially in the spring, the country is covered with grass sufficient to feed the horses of an army.

This circumstance is mentioned in reply to the arguments of those who persist in asserting that nothing but sand is found in these deserts. But even were this the case, the difficulty would not be insurmountable; the Russians know very well how and where to find provisions, as General Mouravieff has pointed out, when he says, with reference to this subject: "At the present time, and with our knowledge of the country, the success of an enterprise of this description might be guaranteed. A corps of 3,000 Russians, commanded by a determined and disinterested chief, would easily conquer and hold this country, the possession of which would be of such advantage to Russia by reason of the importance of her commercial relations with Asia. At Khiva (it is General Mouravieff who speaks) we could augment our forces with the 3,000 Russians* now enslaved there, and the 30,000 Persians who, like the Russians, burn with impatience to escape from the misery which they are

* Mouravieff wrote in 1819. General Peroffsky's expedition in 1839, though an utter failure, so alarmed the Khan of Khiva, that he gave all the Russian slaves their freedom. By the Treaty of 1842, negotiated with the Khan of Khiva by Colonel Dainlewsky, it was stipulated that no Russian should be held in slavery in Khiva. The last Russian Mission to Khiva was that of General Ignatieff, an amicable one, in 1858.

compelled to endure. As to provisions, where are they to be found? Why at Khiva itself, where they abound."

With reference to the traffic through the country of the Aimaks and Hezarehs, M. Ferrier says, that in consequence of the incessant hostility between the Hezarehs and the Affghans, the latter as well as travellers going from Cabool to Herat are obliged to make a considerable detour by Balkh or Kandahar, a distance of a month's journey for caravans, instead of a fortnight, if they could travel by the direct route between those two cities.

As an instance of the rapidity with which communications might be carried on between these two places, M. Ferrier mentions, that in 1844 Dost Mahomed sent a letter by a Hezareh, who, travelling through his own country, and with the same horse, only took eight days to go from Cabool to Herat.

The Affghans, however, M. Ferrier says, coming from Balkh, Cabool, Kanahar, or Herat, never venture to travel through the mountainous country inhabited by the Hezarehs; not so much on account of the natural difficulties of the country, as from their knowing that every man's hand is against them; formerly, the Affghans only entered that country to plunder and massacre, and now when an Affghan is caught by the Hezarehs he is treated like a wild beast. The Affghans consequently prefer making a long circuit in going from one town to another, rather than run the risk of certain death in taking the shortest route. But an European army led by a Commander, who understood how to manage the Chiefs governing that country, and who advanced with prudence, would have no serious difficulty in traversing the country. Water abounds everywhere and at all times of the year, the flocks and herds are numerous, harvests plentiful, fruits in abundance, and rich pastures, all the wants of an army in short might be satisfied at a cheap rate, while the excellent breed of the Hezareh horses would afford a first rate remount for the cavalry. The mountains which the Affghans dread so much may, however, be avoided by following the course of the rivers and valleys. M. Ferrier considers, from information obtained by him from various sources, that there are two roads to the north and one to the south by which Cabool may be reached easily from Herat, while another road to the south leads direct to Kandahar, and he gives the following itineraries:—

1. From Herat to Tchektcherané, Derzi, Ser Mourghâb, Gannut, Hezareh, Dereguz, Kowam, Bamian, and Cabool.

2. From Herat to Ferzabad, Obeh, Kodjah-Shest, Doolatyar, Shéherck, Kassaneh, and Deh-Zingin; from this latter place there are three roads, the first to the north passing by Tekenholin, Bamian, and Cabool, the centre road by Dirazgul, Barch Khané, Kalehemir-Saleh, and Cabool, and the eastern road through the villages of Alazar Bey, Guzeristan, and Nawar, joining the road from Cabool to Ghusneh, without any serious difficulties.

Another road goes direct from Deh-Lingin to Kandahar by Neadané, Deh-Kondi, and Dewa Ivat.

3. Instead of passing by Gurrané and Washir to Kandahar, that city may be reached more quickly by Sakhar, Teiréré, Gulistan, and Gourek, but the mountains are difficult, the country insecure, and near Kandahar without water, nor is this road ever travelled by caravans.

It would, he says, be easy for the English to make a direct road from Shikapoor to the River Hilmend (or Hirmend), which may be reached by following certain tracts, well known to the natives, across the steppes, where water is to be found at all times. The sandy desert encroaches but little upon this route, and only for a short distance, and on these spots there is no reason why the English should not follow the example of the Russians, and sink wells at certain distances, establishing around them colonists at once warlike and agricultural, by which means the Hilmend might be easily reached, from the banks of which river Herat is not more than six or seven days' march. The country thus fertilized would quickly become the favourite route for caravans proceeding from Persia to Turkestan. As it is, the caravans are obliged to make a great detour by Kandahar to reach India by a road which cannot be protected, and is consequently dangerous; they would certainly prefer the one which was not only the shortest, but the safest.

With reference to the observations made by M. Ferrier on the importance of the Aum Daria (Oxus) to Russia in a commercial and especially in a strategical point of view, a far less favourable opinion of the capabilities of that river as the high road of commerce and civilization between India and Europe has been pronounced by M. Vennkoff, a Russian traveller, who visited the countries watered by that river in 1860, and who on his return to St. Petersburgh read a paper at a

meeting of the Imperial Geographical Society of which the following is a slight resumé. "Starting," he said, "from Lake Victoria of Wood, the length of the Aum Daria to the sea of Aral is 280 geographical miles; among the rivers of Europe it approaches nearest in size to the Dnieper, though in every other respect, and especially as regards climate, navigation, and commercial advantages, the two rivers will bear no comparison.

"The basin of the upper Oxus is shut in on three sides, the north, east, and south, by mountains from 15,000 to 18,000 feet high, crossed by such difficult roads as are only accessible to pack horses, so that there is little chance of this part of its course ever becoming the advanced post of Indian commerce.

"A similar and no less melancholy fact presents itself when we contemplate the course of the Aum Daria beyond the mountainous range of Badakschane, Wakan, and Karategune near Termes and Balkh. Starting from the first of these two places, the whole distance to Patinak, the first town in the Oasis of Khovaresen, about 800 versts, seems almost devoid of inhabitants, the fixed population avoids the burning valley of the Gehom, and the few hamlets and small villages on its banks are only to be found near the ferries on the track of the caravans. At Chaordjee the Aum Daria is 235 sagenes (1,410 feet) in width and 24 feet deep, but in spite of its size there appears to be little chance of its ever becoming the high road from Europe to Hindostan. When we consider that the shores of the Sea of Aral are so arid that, up to the present time it has not been possible to establish the smallest population upon them; when we remember that the Sea of Aral itself is separated from the inhabited districts of Russia by a distance of 800 versts of steppes; when we consider the difficulty, not to say the impossibility of reforming the predatory nature of the nomads of the steppes, we may well affirm that the Aum Daria can scarcely even, in the most distant future, hope to become a secondary channel for the diffusion of industry and civilization. It would be difficult to say whether the civilization, which may penetrate to the country situated on the upper course of the river, a country most rich in every description of metals and precious stones should come from the north-east, that is to say from the Sea of Aral, or from the south across the Hindoo-Kush, but however painful it may be to Russian patriotism to declare it, we are inclined to adopt the latter hypothesis."

M. Vámbéry, the Hungarian traveller, also remarks on the shifting sandbanks of the Oxus, which he says is the reason why Russian vessels do not pass higher up the river than Kingrad, and he expresses his surprise that Burnes should have spoken so favourably of its navigability.

Hanover.

Report by Mr. Doria, Her Majesty's Secretary of Legation.

Hanover, January 31, 1865.

Information taken from Statistical Returns relative to the Number of Vessels, their Construction, and the Movement of Shipping in the Kingdom of Hanover at the end of the year 1862.

AMONGST the total number, 843, of sea-going vessels, as specified in Table No. 1, there was one screw-steamer of 108 lasten burden, built at Emden, with an engine of 40-horse power.

Amongst the 2,748 smaller vessels mentioned in the same Table there were 10 river steamers, altogether of 403 lasts burden—that is, 2 on the Ems, in the harbours of Emden and Leer, and 8 upon the Elbe; that is, 2 at Harburg, 3 at Stade, and 1 at each of the places Bustehude, Crany and Friburg.

The sea-going vessels are classified in the following manner:—

	Burden.		Burden.
248 under	37½ lasts.	31 under	300 lasts.
355	75	9 above	300
200	150		

We may fix the average of the burden of sea-going vessels at $64\frac{3}{10}$ lasts, but there is a difference in the burden of ships, according to the district. For example,

if a ship in the district of the Weser is of $138\frac{5}{10}$ lasts burden, a ship on the Elbe is only of $73\frac{4}{10}$, a ship on the Ems is only of 60 lasts burden, a ship of Friesland $36\frac{8}{10}$.

Among the 9 ships of more than 300 lasts burden 7 belong to the Weser (6 to Geestemunde and 1 to Blumenthal), 1 to Ems (Emden), 1 to the Elbe (Harburg).

Of the 603 smaller vessels which are of 75 lasts burden, 479 belong to Ems and the North Sea, 102 to the Elbe, 22 to the Weser.

In the most important harbours of Hanover there were in 1862 the following ships:—

	Ships.	Lasts.	Average Burden.		Ships.	Lasts.	Average Burden.
Passenburg	181	13,812	76	Geestemunde ..	23	4,080	177
Emden	99	7,188	72	Harburgh	21	3,267	155
Leer	52	3,410	65				

The number of the merchant ships of Hanover has increased by 49, of 4,705 lasts burden; whilst in 1861 the number had decreased by 16.

In 1862, 56 sea-going ships were lost, amounting to 2,495 lasts burden; that is, nearly 7 per cent. on the whole number of ships.

In 1861, 71 ships were lost; the loss of 1862 appears, therefore, much decreased.

By the loss of these 56 ships 74 persons perished; 17 of these vessels had not been built 5 years, 13 less than 10 years, 26 more than 10 years; 43 belonged to Ems, 12 to Friesland, 1 to the Weser.

In the number of docks mentioned in the annexed Table No. 2, are included also those of minor importance, calculated to admit ships for repairs only; the building yards of private persons are not included, who live in the interior, and both build and repair small vessels, which are sent by land to the rivers or canals.

The 154 docks are situated as follows:—Province of Aurich, 56; Province of Osnabruck, 23 (of which latter 17 are at Papenburg; Province of Stadt, 40; Province of Luneberg, 30; Province of Hanover, 5.

At the beginning of 1862, of the vessels still in construction there were 75 sea-going, 48 river vessels. In the same year 101 vessels were placed on the stocks for sea-going navigation, 128 for river navigation; so that 176 sea-going and 176 river ships have been taken into construction: 93 sea-going vessels of 9,246 lasts, 130 river vessels of 2,493 lasts, were finished for use.

By comparing the number of vessels built in the years 1861 and 1862, it appears, 8 more sea-ships and 8 more river vessels were built in 1862 than in the year previous.

In the year 1861 there was an increase in the number of vessels constructed, notwithstanding that the years 1860 and 1859 were very unfavourable to commerce. It is, however, satisfactory that in 1862 there was also an increase, for it appears that the number of vessels constructed for the sea reached nearly the same number built in 1857 and 1858, years very favourable to commercial enterprise—that is, from 90 to 96 vessels.

The foregoing details have been extracted from the shipping lists kept in the ports and harbours hereafter enumerated.

On the Ems and the Dollart these lists or registers are kept at Leer, Emden, Papenburg, Deener, Oldersum, Dityum, Jemgum, Landshaftspolder, Halte, Petkum, Larrett, Lingen.

On the north of the Westfriesland coast they are kept at Norden, Carolinensiel, Bensersiel, Nordeick, Grutsiel, Nesymersiel, Westeraccumsiel, Dorumnersiel, Neuharlingersiel.

On the Elbe and its confluents at Harburg, at the mouths of the Este, the Oste, the Schwinge (Brunshausen), at Ottendorff, Frieburg, Twielerfleth, Hoopte, and at the mouth of the Luhe.

On the Weser and its confluents they are kept at Geestemunde, Ronnebeck, Farge, Sandstedt, Weddevardenertief, Vremertief, Dommertief, Altetief, Grohn and Burgdamen.

On the Vechte, at Nordharn.

The registers of these stations do not give an exact estimate of the whole mercantile movements, it is true, especially as regards the river navigation; but they serve to show the importance and the extent of the maritime commerce of the kingdom.

A more exact view of the river navigation may be obtained by examining separately the shipping lists in each port. To have a clear estimate of the maritime importance, we will examine the returns of the five principal ports of the kingdom. (See Table No. 4.)

(Signed) WM. DORIA.

Department of Justice	2,955,495	28	Unforeseen expenses	50,000	0
Protestant Worship	1,747,972	58·5		103,348,078	56·5
Home Department	23,711,995	17			
Marine	8,906,609	30	Or about 8,700,000*l.*		

These votes include, besides the ordinary expenditure, the following extraordinary items:—

	Florins.
Railways	14,500,000
Improvement of the port of Rotterdam	1,000,000
Redemption of debt, in addition to the annual sum of one million of florins appropriated by law for this purpose	10,011,000
Charges arising from the measure for the abolition of slavery	1,800,000
Deficit on the Colonial Budgets of Surinam, Curacao, and the Coast of Guinea Settlements	1,653,500
	28,964,500

To meet the foregoing expenditure the following sums have been appropriated:—

	Florins	c.		Florins	c.
Direct taxes	21,056,300	0	Miscellaneous	1,704,576	0
Excise	18,050,000	0	Contribution from Belgium pursuant to Treaty of 1842	400,000	0
Indirect taxes	12,799,500	0	Third instalment of redemption of Scheldt dues	3,809,253	33
Import and Export dues	4,180,350	0	Interest on arrears of the same	304,740	26½
Public domain	1,290,000	0	Colonial surplus for 1864	7,825,000	0
Plate duties	256,500	0	Contribution from Netherlands India for 1865	20,450,000	0
Post office	2,250,000	0	From surplus of 1863	7,600,000	0
Telegraphs	445,900	0		103,643,005	9½
Lottery	410,000	0			
Game and fishing licences	100,000	0			
Pilotage	700,000	0			
Mines	885	50			
Profit on railways	10,000	0			

The last item but one requires some explanation. Previously to the year 1859

the colonial surplus for each year was placed upon the Ways and Means for the same year, under two heads, first, a fixed sum of 9,800,000 florins, as interest of a so-called colonial debt; secondly, the presumed disposable balance of the budget of the East Indian possessions. Since, however, these balances, uncertain in amount, entered into the public chest at successive periods later in the course of each year, it was thought inexpedient to forestal them; and, accordingly, since 1859 the estimated East Indian surplus for each year has been charged only with the above-mentioned sum of 9,800,000 florins, and, since 1862, with the further sums corresponding to the deficit on the budgets of the other colonies, which were formerly defrayed directly by the East Indian budget, but are now carried to the account of the Colonial Department in the Netherlands, the balance being transferred to the Ways and Means of the following year.

A large balance accordingly lay thus unemployed for the greater part of the year in the public chest, wherefore it has now been thought advisable to revert to the former practice of taking credit for the whole estimated colonial surplus of the year, and to merge the special items of the interest of a fictitious Indian debt and the deficit of the budgets of the other Colonies into one sum under the denomination of Contribution from Netherlands India. Thus, therefore, the Minister of Finance has had at his disposal for this year a sum of 10,650,000 florins over and above the ordinary resources of former years.

As the Tables which I have usually annexed to my "Concise Reports" of former years have been transmitted from time to time during the past year with the ordinary correspondence of the Legation, I need here only refer to them in making the few observations which they suggest.

The ordinary branches of the public revenue for the twelve months ending 31st December, 1864, have yielded 64,161,345 florins 6·5 cents., being apparently in excess of the receipts for 1863 by 2,806,254 florins 52 cents. But in the Return for 1864 two items are included which are not to be found in that for 1863, namely, the revenue from the public domain, 1,295,549 florins 71·5 cents., and game and fishing licences, 111,783 florins 50 cents., making together 1,307,333 florins 21·5 cents., and leaving an increase of 1,498,921 florins 31·5 cents. to be accounted for. Part of this is due to the changes introduced into the branch of Excise which took effect on the 1st March last, namely, the increase of the spirit duties from 22 florins to 35 florins per vat, as a compensation for the loss by the abolition of the duties on fuel. Since, however, a long credit is allowed in the settlement of the excise upon turf, the receipts under that head are but little lower than for the previous year, so that the entire effect of the changes cannot be accurately estimated. The spirit duties have produced 2,281,337 florins 32·5 cents. more than during the preceding year; deducting from this the loss on fuel, viz., 1,187,360 florins 81·5 cents., the increase of receipts due to these changes is 1,093,976 florins 51 cents. But the sugar duties have fallen off by about 150,000 florins, while there has been a trifling increase on some other articles, so that the actual difference between the Excise receipts of 1863 and 1864 has been 1,056,753 florins 1·5 cents in favour of the latter year.

The sums voted for the payment of interest upon the debt are—

	Florins	c.
On a capital of 674,344,170 florins at 2½ per cent.	16,858,604	25
„ 102,896,211 florins 95 cents at 3 per cent. .. .	3,086,886	36
„ 15,382,000 florins at 3½ per cent.	533,120	0
„ 196,644,500 florins at 4 per cent.	7,865,780	0
Annuities and other annual charges	142,246	78
	28,486,637	39

The funded debt has been reduced by the following amounts:—

2½ per cents.	9,900,300 florins.
3 „	1,274,700 „
3½ „	564,000 „
4 „	4,199,200 „

The highest price of the 2½ per cents. during the year was 64⅛ in January, the lowest 58⅞ in October. Of the 3 per cents., 76⅞ in January and April, and 70 3/16 in October. Of the 3½ per cents., 94⅛ in April, 88½ in October. Of the 4 per cents., 99 1/16 in January and April, 93⅝ in October.

The income from the Customs shows a satisfactory increase as compared with that of the preceding year, and the monthly Tables of Imports and Exports manifest in general a progressive activity in trade. In yarn, of all materials and descrip-

tions, the quantities both of imports for consumption and in transit exceed for the eleven months of 1864 those for the whole twelvemonth of 1863. The quantity of pig and bar iron has however fallen off, but both the consumption and transit of other metals, as well as of articles of iron, has increased. In manufactured goods silks have fallen off, likewise cotton goods for consumption, while the quantity in transit is greater. In colonial produce coffee and indigo have increased, while sugar has fallen off. The export of butter to England alone has exceeded, during the eleven months of 1864, 14,000,000 of kilogrammes, while the whole exportation has surpassed that for twelve months of 1863 by upwards of 1,000,000 of kilogrammes. The business in cheese has not been equally favourable in its result, but cattle and sheep, for which Great Britain is by far the best customer, have been exported in increasing numbers. A considerable increase has taken place in the export of spirits, and a very remarkable one in the article of refined sugar exported to Great Britain. In comparing the figures representing the business in this article for 1862 and 1863, with eleven months of 1864, it may be seen that while the whole quantity exported in 1864 has exceeded that for 1862 and 1863 respectively by a little more than 1,000,000 of kilogrammes, England has taken in 1864 35,740,000 kilogrammes against 20,110,000 kilogrammes in 1862, and 15,085,000 kilogrammes in 1863.

The figures indicating the business done in one article, paper, are particularly interesting. In 1862, when the old rate of duty on the export of rags subsisted, the whole quantity of rags exported from Holland was about 434,000 kilogrammes; in 1863 it was nearly 1,900,000 kilogrammes, of which 620,000 kilogrammes were in transit. During the eleven months of 1864, the corresponding figures are, 1,776,000 kilogrammes, and 500,000 kilogrammes, of which 691,000 kilogrammes appear to have been sent to England. Within the same period the imports and exports of paper are represented by the following figures :—

Imports.			Exports.		
	Total.	For Consumption.		Total.	Dutch manufacture.
	Florins.	Florins.		Florins.	Florins.
1862	1,710,000	494,000	1862	1,964,000	722,000
1863	1,613,000	513,000	1863	1,867,000	794,000
1864 (11 months) ..	1,726,000	597,000	1864 (11 months) ..	2,031,000	901,000

The return of ships entered inwards during 1864 shows an increase over the preceding year, of Netherlands vessels 383, and 70,948 tons, while the number of foreign vessels has diminished by 302, though the tonnage employed has increased by 30,552 tons. 174 Netherlands ships more, with 5,289 tons have cleared outwards, together with 105 foreign ships and 95,216 tons more than in 1863.

The harvest accounts from the different provinces represent the wheat crop as in general below an average in quantity, but good in quality; the other grain crops, particularly oats, good. Potatoes have been abundant and good, with but little disease, principally in the later kinds. Peas and beans have generally turned out well. While the roots have been in some districts an entire failure, in others they have almost made up for the short hay crop, which has been far below an average throughout the country, in some places not half a crop. The quality, however, is generally very good and the price high. Pasture has also been generally deficient, which has occasioned a considerable falling off in dairy produce.

Almost everywhere the flax has been abundant and of good quality. The koolzaad, a valuable crop, has mostly failed.

The Tables of exports of cotton goods of Netherlands manufacture to the Indian possessions show an improvement in manufacturing industry as compared with the preceding year; the quantities, however, remain far below the average of the years during which the influence of the civil war in America upon the price of the raw material had not yet been felt. The whole export of other manufactured goods is so trifling in amount (not reaching the value of 15,000*l.* for the first eleven months of 1864) that the increase indicates no progress worth mentioning.

(Signed) WILLIAM R. WARD.

Wurtemberg.

Report by Mr. Baillie, Her Majesty's Secretary of Legation.

Carlsruhe, February 15, 1865.

THE general state of trade and industry in Wurtemberg underwent little change in the past year 1863–64, as comparing with the preceding year.

Even the fears which manufacturers thought themselves justified in entertaining for the cotton industry have not been realised, at least to the extent anticipated.

The sensible rise in the price of cotton about the middle of the year obliged a few of the smaller mills to stop part of their spindles for a few months. On the other hand, a new factory with 7,000 spindles and a number of power-looms commenced operations.

On the whole the spinning business was less affected by the price of cotton than the weaving was by that of yarn, because the retail dealers and the public held out more resolutely against the high prices of woven goods than the weavers were able to do against those of yarns.

The deterioration of yarns rendered weaving exceedingly difficult, diminished the amount of work performed, or necessitated a rise of wages.

Hand-weaving has greatly declined. The numerous retail establishments which formerly employed many hand-weavers for articles used in the country have either given up the business or reduced it to a minimum.

There has been, however, no sensible distress in consequence of want of work among this numerous class.

The hand-weaver's trade is becoming every day more precarious, for the power-loom gains ground with rapid strides for every kind of weaving. Little more now remains for the hand-weaver to do in this branch of industry, and he will be compelled in future to look out for other means of employment.

The great progress which has been made in Wurtemberg in all mechanical improvements is no doubt in a great degree the result of the Industrial Exhibition in London.

Many manufacturers embraced the opportunity of purchasing spinning and weaving machinery in England at reduced prices during the cotton crisis. The result is, that upwards of 600 new power-looms have been set in operation in the country during the last two years.

The cotton crisis is now looked upon as fairly past. Manufacturers continue their purchases of raw material, which now arrives in constant supplies from all quarters. It is generally believed here that even if the market of the Southern States of the American Union were at once re-opened, the stores of cotton remaining there would not be sufficient to produce a sudden or serious re-action.

Metallurgic Industry.—There has been great activity in this branch of industry. The locomotive manufacture at Esslingen especially does good business, owing to the number of railway orders they receive from all parts. This establishment employs from 900 to 1000 workmen, and generally produces 1 locomotive a-week.

Danube Navigation.—In 1863, 69 vessels went from Ulm, on which 44,124 centner goods of all kinds were despatched. The decrease since 1856 has been a constant one.

Years.	Centners.	Years.	Centners.
In 1856	125,912	In 1860	64,773
1857	98,632	1861	64,650
1858	95,925	1862	47,782
1859	70,750		

The most serious competition to the Ulm navigation was caused in 1863, in consequence of a very low tariff having been fixed for goods going from Holland to Bavaria and Austria, the result of an arrangement between the Bavarian and Austrian Railway Administrations on the one side and those of the left bank of the Rhine, the Netherlands, and Hesse, on the other. The effect of this has been that

the route hitherto taken by such goods (on the Rhine to Mannheim, from thence by rail to Ulm, and from Ulm down the Danube) could no longer be continued.

This competition was especially felt in coffee, hitherto the chief article of the Ulm navigation trade.

At the beginning of 1864 the Baden and Wurtemberg Governments, by lowering the railway tariff for goods passing by Mannheim, adjusted to a certain degree the difference of freight between these two routes. This measure will, however, be probably of little avail in the end, because, although the freight may be the same, the competing route will always have the advantage over that by water, of greater speed. Indeed, goods from Holland destined for Bavaria and Austria seem generally to have abandoned the route by Mannheim, in order to reach their destination from Mayence by Darmstadt, Aschaffenburg, and Würzburg.

Since the junction with the Wurtemberg-Remsthal Railway has been effected at Nördlingen, the completion of the line to Donauwörth by Nördlingen is felt to be no less serious to the Ulm navigation—not so much on account of the reduced railway freight to Donauwörth, as owing to the Austrian Danube navigation having been extended to that town; and especially as this latter business, enjoying as it does, a guarantee of interest from the State, inquires comparatively little whether the undertaking is likely to prove remunerative or not.

Under these circumstances it is probable that in the long run the Ulm navigation will be found to succumb to the pressure which surrounds it on all sides.

Coal Trade.—The importation of coal and coke into Wurtemberg is now very considerable. The returns for the past business year 1863–64 have just been published by Government, and are as follows:—

	Zoll. centners.	Zoll. centners.
By Water:—		
To Heilbronn—Ruhr and Saar coal and coke	865,850	
Berigheim ditto	12,000	
Constatt	—	
		877,850
Of which were forwarded from Heilbronn by rail	478,235	
To Stuttgardt by Rail from Baden:—		
To Bruchsal, for immediate use of Wurtemberg Railway Administration, Ruhr and Saar coal	95,910	
By Bruchsal, ditto	2,172,941	
Mühlacker ditto	100	
From Bavaria to Stuttgardt;—		
To Ulm (for local use), Saxon and Miesback coal	54,800	
By Ulm, Saxon and Miesback coal	6,265	
To Nördlingen, for immediate use of Wurtemberg Railway Administration, Saxon coal	25,955	
By Nördlingen do.	165,660	
		2,521,671
Total		3,399,521

Of this was forwarded in transit to Bavaria—

	Zoll. centners.
Saar coal—by Ulm	162,790
„ Nördlingen	2,385
„ for Nördlingen itself	4,925
„ and by the Lake of Constance exported from Friedrichshafen	4,600
	174,700
So that for consumption in Wurtemberg there remained	3,224,821
Arrived by railway for transport	2,823,201

Coals received by the Railway Administration, inclusive of stores of previous year, amounted—

	Zoll. centners.
Saar coal	325,239
Ruhr coal	250,540
Zwickau coal	39,840
	615,619

	Zoll. centners.
Railway consumption (exclusive of South Line, where the locomotives are heated with turf, and coal only exceptionally used)	571,762
Navigation on Lake of Constance	38,294
„ on Neckar in Heidelberg and Heilbronn	9,875

Paper Manufacture.—The state of the paper manufacture contrasts unfavourably with almost every other branch of industry in Wurtemberg.

No improvement appears to have taken place either in the price of rags, in the price of paper, or in the extent of the markets where the paper produced in this country can be sold at a profit. The price of rags in Prussia aad Saxony has for some time past been from 10 to 20 per cent. lower than in Wurtemberg, so that competition in those countries has become very difficult for the Wurtemberg manufacturer.

The English market has fallen off. A few sorts of the finest writing paper from Heilbronn is all that now goes to England.

In America, where prices are better, the Wurtemberg manufacturer finds it almost impossible to compete with England, Belgium, and North Germany.

In the country itself competition lowers the price of paper.

In short the trade has fallen into a very depressed condition, the result of over-production, and the high price of rags.

The rag collectors now realize 18 florins per centner for cotton rags, which have now become more scarce in consequence of the spinning factories leaving fewer sweepings, and the rags being now partly returned again for spinning material.

The Wurtemberg Chambers of Commerce speak very highly of a preparation of wood, invented by a manufacturer of Heidenheim in this country, as a substitute for rags, and strongly advise its being brought into more general use, at least in conjunction with rags, for the coarser kinds of paper. This material can be produced at a less cost than anything else that has been as yet tried in place of rags, and is said to answer very well.

There are 26 paper-engines now in operation in the Wurtemberg mills, which require for their full employment at least 180,000 centners of rags, equivalent to 115,000 centners of rag material.

If a fifth part of the latter were replaced by the preparation of wood, which it is said would be equally serviceable for various kinds of paper, it is calculated that there would be a saving of the difference between 271,040 florins and 109,875 florins, the cost respectively of the production of the same amount (in round numbers 22,500 centners) of the two materials.

The Hawking Trade.—This trade has greatly increased since freedom of industry was first inaugurated in Wurtemberg on May 1, 1862.

Before that time the hawking trade was regulated by special enactments of the Government in 1857, on the basis of the revised Industrial Legislation of the year 1836.

In conformity with these regulations the grant of a hawker's license was made dependent on the requirements of the district for which it was sought, as well as upon certain personal qualifications being possessed by the hawker.

The authorities could only issue licences to persons within the limits of their jurisdiction for a year; to gipsies for half a year. The licence could at any time be recalled, and was only valid for certain specified kinds of wares.

A hawker was only licensed to trade, if it appeared probable that there would be a sufficient demand for his goods over the district he proposed to wander, to enable him to realize such returns as would offer no inducement to him to turn beggar, or engage in dishonest practices.

The foreigner was obliged in the first instance to produce certificates of his good character and nationality. He was only then permitted to exercise his trade if thought advantageous, or, at least, not injurious to native industry.

Foreign Jews and gipsies were not allowed to hawk at all. Licences were also refused to the subjects of those States in which the hawking trade was forbidden to the natives of Wurtemberg.

A foreigner's licence was only for three months, and only for a limited extent of country.

These restrictions, which necessarily led to much arbitrary proceeding on the part of the authorities, were incompatible with the principle of freedom of industry.

In the new Industrial Law of February 12, 1862, there is nothing to prohibit any person exposing and selling his wares in the streets and houses, or setting up any lawful trade. Hawkers, however, must obtain the permission of the local authorities for exposing their goods for sale in the place of their residence. If beyond those limits they must take out a licence from the Government.

Hawkers also require, according to the new law, a Government licence for the sale of tracts and pictures; and they are forbidden to hawk medicine, poisons, and brandy altogether.

Foreign hawkers are admitted to the same privileges as natives, practically, but the right of the Government to admit or exclude them has undergone no change by the recent industrial legislation.

The effect of the removal of the former restrictions will appear from a comparison of the number of licenses issued during a period before and after the new law of 1862.

In the twenty-eight months from January 1, 1860, to April 30, 1862, 7,277 licences were issued to natives and foreigners at the rate of 260 per month.

In the twenty months after the new law from May 1, 1862, to December 31, 1863, 21,938 licenses, at the rate of 1,097 per month, were issued to natives and foreigners.

The different countries represented in the two periods were—

	No. of Licences issued.			No. of Licences issued.	
	1st Period.	2nd Period.		1st Period.	2nd Period.
Baden	10	572	Saxony	..	25
Bavaria	41	1,704	Austria	40	855
Hanover	..	3	Switzerland	..	44
Two Hesses	1	112	Netherlands	..	17
Nassau	..	57	France	..	34
Prussia	83	1,354	Italy		34

The number of licences there were issued or renewed do not of course represent the actual number of hawkers trading during the two above periods, as one and the same individual may appear more than once on the lists in the different places.

The number of native hawkers during the first period are stated at 3,047, and in the second at 10,107.

Foreign hawkers (first period) 72; ditto (second period) 1,275.

Commercial Treaty with Switzerland.

According to the principles of the Commercial Treaty concluded between France on the one side and Prussia on behalf of the Zollverein on the other, as set forth in the Prussian circular despatch to the Zollverein States of April 3, 1862, the new Tariff was to be made equally applicable to all countries.

It was, however, stated in the same despatch that Belgium and Switzerland should not be allowed to participate in the advantages of the same, unless they made such reforms in their commercial legislation as should be satisfactory to the Governments of the Zollverein, when that union came to be renewed.

That period is now at hand, and as it is of great importance to Southern Germany that their commercial relations with Switzerland should be improved and placed upon a permanent footing, the Governments of Bavaria, Wurtemberg, and Baden have been charged with negotiating a Treaty with Switzerland, in view to obtaining such concessions as may be regarded as satisfactory, and open the way for the admission of Switzerland to all the tariff advantages of the French Treaty.

A Commission of the three countries is at this moment now sitting at Stuttgardt for the purpose of coming to an agreement on the preliminaries of the negotiation to be entered upon with Switzerland. The difference in the views of the Governments of Bavaria and Wurtemberg and those of Baden on all commercial questions renders this by no means so easy a task as might have been expected under present circumstances. The Governments of Bavaria and Wurtemberg have been hitherto unfavourable to the negotiation of a Treaty at all with Switzerland, and would prefer some less formal arrangements for the regulation of the frontier trade being entered into which might be revoked at any time. It is, however, scarcely probable that these difficulties will prove sufficiently serious to retard much longer the commencement of the negotiation, especially as the time for the commencement of the new Zollverein Tariff (July 1) is no longer very distant.

The concessions required of Switzerland are of course entirely of a free-trade tendency, and will greatly facilitate the commercial relations of that country with Southern Germany, as may be easily understood from a statement of some of the grievances complained of.

A commercial traveller, for instance, wishing to stop at Schaffhausen, Waldshut, and other small towns for the disposal of goods on his journey from Constance to

Basle, is obliged to pay vexatious though trifling duties of entrance or exit on his goods at the four different points at which he must necessarily enter and quit the Swiss territory between the two places.

Tradesmen have to pay entrance duties on the goods they take with them to the Swiss fairs, but they are allowed no drawback on the part of Switzerland for such portion of their wares as they bring back unsold.

Cattle crossing the frontier for pasturage in Switzerland pay duty both on entrance and return from the Confederation.

These are some of the cases brought forward, especially by the Baden Government, in defence of their insistance upon the necessity of a reform in the Swiss tariff.

The objects of the Treaty may be summed up as follows:—

1. To secure to Switzerland the right to the treatment of the most favoured nation. To obtain mutual equality of rights of settlement on both sides the frontier, and also mutual protection for literary works.

2. Simplification of the Swiss tariff; reduction in the number of articles of import, export, and transit at present chargeable with duty.

3. To facilitate the petty commerce between the inhabitants on both sides the border.

The Baden Government have been already during the last summer in negotiation with the Swiss Government on the question of the rights of settlement; and there is no reason to doubt that the Swiss Government feel the necessity of coming to a good understanding with Germany as soon as possible with regard to their commercial and industrial legislation.

Account of Wurtemberg Fairs and Markets.

In the years 1859 and 1861, the Wurtemberg Ministry of Commerce instituted a special statistical inquiry into the condition of the fairs and markets of the country, the results of which have lately been published.

The following are some of the principal Returns which have been obtained:—

The business done in general wares in the fairs and markets of country towns and villages, as well as in the annual larger fairs at Heilbronn, Stuttgardt, Ulm, and Ludwigsburg, cannot be determined with accuracy. If, however, the average business at each of the 998 fairs and markets annually held be reckoned at 4,000 florins, the total will amount to 4,000,000 florins.

In leather and leather goods of all kinds the trade is very considerable at the fairs, especially at the annual fairs of Ludwigsburg and Asberg. The business done at both amounts to about 1,500 centners of leather, in value 126,000 florins.

In the other markets the leather business amounts to 633,400 florins.

In connection with the annual fairs in the Neckar district, there is always a market for every description of wooden article. The value of the sale of such articles amounts from 110,000 to 115,000 florins.

In the Stuttgardt fairs the amount displayed of this description of goods, especially coarse and fine basket-work, has greatly increased.

(2.) Of the special fairs for particular kinds of wares, the cloth fair held at Stuttgardt, in August, is the most important. The annual business amounts on an average to from 600,000 to 700,000 florins.

Since the year 1862, two fairs for woollen, cotton, silk, and other goods have been held at Ulm in the spring and autumn.

The business in both amounted in the first year to about 350,000 florins.

The total business at fairs for goods of this kind amounts in round numbers to 1,000,000 florins.

There are two furniture markets in connection with the Stuttgardt spring and winter fairs, held on the first day of the fair.

The quality of the furniture displayed is said to have greatly improved, and the amount increased during the last eight years.

These fairs have been very useful in developing the skill of country furniture makers, and have also improved their economical condition.

Many at long distances from Stuttgardt manufacture their goods with a special view to these markets. They obtain better prices there than they could get elsewhere, as well as fresh orders. The constant influx of fresh families into Stuttgardt (about 2,000 persons per annum during the last few years) keeps up a brisk demand for furniture, and Stuttgardt has now become a central point within

a large circle for this trade. The business in furniture at both these fairs may amount to 45,000 florins.

Special leather fairs for wholesale trade are held in Heilbronn and Ulm.

The five annual fairs in Heilbronn show a progressive increase:—

Years.	Centners.	Years.	Centners.
1854	2,765	1859	5,481
1855	3,245	1860	5,261
1856	3,578	1861	5,895
1857	4,141	1862	7,119
1858	4,767		

The value of the average number (5,700 centners) of goods annually sold during the last five years amounts to about 640,000 florins per annum.

The business at the two Ulm leather fairs (the first opened September 1861) in 1862 amounted to 140,000 florins. The total business in leather in the Heilbronn and Ulm leather fairs may be reckoned at the present time at from 800,000 to 900,000 florins a-year.

Of the special markets for different kinds of raw material, the most important are the six wool markets.

The average annual business in the period 1858 to 1862 amounted in these markets to—

	Centners.	Florins.		Centners.	Florins.
Kirchheim	12,050	1,416,936	Tuttlingen	701	73,017
Heilbronn	4,036	449,195	Ekingen	613	61,416
Stuttgardt	1,204	118,400	Göppingen	472	45,776

The total annual business in wool during the period 1858 to 1862 was on an average 10,976 centners, value 2,164,740 florins; in 1862, 22,650 centners, value 2,530,249 florins; in 1863, 21,927 centners, and value 2,371,034 florins. About 3,000 centners of foreign wool, chiefly Bavarian, goes annually to the Kirchheim market; smaller quantities to Heilbronn and Stuttgardt, as well as to the annual markets in Aalen, Sulz, and other small towns.

The amount of wool annually produced in Wurtemberg from 680,000 sheep is estimated at 18,500 centners.

In Heilbronn, since the year 1860, auctions for bark for tanning take place regularly in February. The business done in the years 1860 to 1864, in different kinds of bark, was:—

	Centners.	Florins.
1860	16,178	75,000
1861	17,172	59,628
1862	15,629	48,345
1863	16,551	64,072
1864	21,591	92,089

(3.) *Cattle Fairs.*—The following Table shows the number of cattle, sheep, and swine sold in the Wurtemberg fairs, together with the value of the sale in the year 1861:—

Oxen, Bulls, Cows, &c.		Horses.		Swine.		Sheep.	
No. of Heads.	Florins.	No. of Heads.	Florins.	No. of Heads.	Florins.	No. of Heads.	Florins.
226,027	16,489,915	6,638	982,637	96,821	696,951	136,806	1,369,573

Total Value, 19,539,076 florins.

(*a.*) The total number of head of oxen in the country, and the number sold in the markets in the under-mentioned years, is stated to have been:—

Years.	No. of heads of Oxen.	No. sold in Markets.	Per centage of Total Heads.
1830	789,469	175,666	22·2
1835	795,612	192,594	24·2
1838	758,487	162,383	21·4
1861	957,172	226,027	23·6

The number of head of oxen had accordingly increased from 781,189 head—the average number of the three years 1830, 1835, and 1838—to 957,172 in 1861, that is, by 175,983 head.

Notwithstanding this increase the business done in the cattle markets has undergone but little change; the reason is, that more attention is now paid to fattening cattle than formerly. Fat beasts are now sold in stall and exported by railway.

The town of Freudenstadt forms the principal depôt for the exportation of fat cattle and sheep to Baden and France, principally to Strasburg and Paris. There are seven different trading companies there for this object, besides two French firms and individual dealers from Rottenburg, Balingen, Kirchheim, &c. The weekly business transacted amounts to more than 25,000 florins, and at certain times to double that sum. Prices of fat cattle from 154 to 184 florins per head.

(*a.*) The value of the total head of oxen, bulls, and cows in Wurtemberg is now, owing to the high price of butchers' meat, estimated at from 95,000,000 to 96,000,000 florins. Of this about 23 per cent. are sold annually in the markets, and fetch from 21,000,000 to 22,000,000 florins.

The average prices of oxen, bulls above two years, and cows, in the years 1835 to 1838 were:—Oxen and bulls, 71 florins 30 kreutzers; cows, 41 florins 45 kreutzers. The average price of horned cattle of every sort, 53 florins 57 kreutzers. In 1861, the average price for cattle of every sort was 73 florins, or a rise of 35·2 per cent.

The prices of beef in 1835 were from 8 to 9 kreutzers per lb.; in 1838, from 9 to 10 kreutzers per lb.; in 1861, from 14 to 15 kreutzers per lb., showing a rise of 57 per cent.

(*b.*) The number of horses in the under-mentioned years was as follows:—

	1830.	1835.	1838.	1861.
Number of Heads	94,297	92,486	96,346	95,996
Number sold	8,934	8,614	8,804	6,638
Per centage of Total Heads ..	9·4	9·3	9·1	6·9

The average price of horses sold in 1835 to 1838 is stated at 109 florins per head; in 1861, at 148 florins per head, consequently a rise of 36 per cent. in 25 years. The above Table in the Returns of the Government is, however, accompanied by a remark that the figures cannot be entirely depended upon. There is no doubt that the market trade in horses has not diminished as compared with the period 1830 to 1840; and it is a fact that the breed of horses has since that time generally improved, and the prices very much risen in the last eight years. If 9,000 in round numbers be taken as the number annually sold at 150 florins per head on an average, the money paid would amount to 1,350,000 florins.

One of the principal horse-fairs is held annually at Stuttgardt. In 1863, 1,599 horses were brought to market, of which 450 were sold, bringing in 168,296 florins. The new horse-fairs in Saulgau are now largely attended; horses there fetch prices from 410 to 750 florins.

(*c.*) *Pigs.*—The total number of pigs in the country in 1855 was 160,686. In 1861 it had risen to 216,965, of which were sold in the markets 96,821, bringing in 69,695 florins, consequently 7 florins 12 kreutzers a-head.

A large proportion are sucking-pigs.

The town of Hall sends about 15,000 pigs, of which the most are sucking-pigs, annually to market.

(*d.*) *Sheep.*—Comparing the total head of sheep with the market results in the following years we have,—

	1830.	1835.	1838.	1861.
Total Head	581,862	580,610	697,292	683,842
Sold in Markets	54,709	71,592	54,501	136,806
Per centage of Total Heads ..	9·4	10·6	7·9	20·0

In the three former years the average price of sheep was 7 florins 45 kreutzers.

In 1861 136,806 sheep produced 1,369,573 florins, or an average price of 10 florins; an increase of price, therefore, of 2 florins 15 kreutzers, or 29 per cent.

The total business in all the fairs and markets in Wurtemberg in 1861 has been estimated as follows :—

	Florins.		Florins.
Ordinary Fairs	4,000,000	Cattle Markets	19,608,000
Cloth „	1,000,000	Corn „	14,382,000
Furniture „	45,000		
Leather Markets	850,000	Total	42,050,000
Wool „	2,165,000		

It will be perceived from the above account that the importance of the fairs in this country has undergone no diminution. Great modifications have indeed taken place in their condition.

The extension and increase of mercantile transactions, and the consequent snpply of native and foreign products of all kinds, have necessarily had the effect of withdrawing from the fairs and markets a multitude of articles formerly exposed there for sale.

Many kinds of goods which people used to purchase in the fairs from foreign dealers are now to be had every day in the ordinary tradesmen's shops, or are produced in the country itself.

This falling-off of market business in certain articles, however, has been amply compensated for by the greatly increased demand for others, which are accordingly brought to market by native manufacturers in much larger quantities than before.

On the whole, the business done at fairs and markets in Wurtemberg, may be said to have very much improved of late years as compared with the past.

The changes in the condition of these institutions has attracted the attention of the Government very frequently during the last fifteen years, during which period they have been especially marked. It has always been a question to what extent the Government should limit the application of the principle of unrestricted industrial freedom to these institutions. When the new Industrial Law was passed in 1862, this point had to be decided.

The policy now adopted is as follows :—

The Government place no obstacle in the way when it is proposed to establish any new fair or market, but they will only grant the necessary permission for five years, except in the case of special fairs for certain specified goods. The Government have thus the means of testing the utility of a new fair during a fixed period, and of causing it to be discontinued after that interval if thought advisable.

(Signed) EVAN P. M. BAILLIE.

Belgium.

Report by Mr. Barron, Her Majesty's Secretary of Legation.

Mr. Barron to Lord Howard de Walden.

My Lord, *Brussels, February* 26, 1865.

1. IN compliance with the Earl of Clarendon's circular of the 24th February, 1857, I have the honour to submit my Half-yearly Report on the Commerce of Belgium, with special reference, as directed by the above circular, to the commerce with the United Kingdom, and also to the question of sugar duties. This Report will comprise thirteen tabular statements of my own compilation, and will be divided into the following four sections :—

A. Commerce and Navigation ;
B. Commerce with Great Britain ;
C. Commercial Measures and Desiderata ;
D. Sugar Duties.

Section A.—*Commerce and Navigation.*

(No. 1.)—Summary Statement of the Imports, Exports, and Aggregate Trade of Belgium from, to, and with other countries during the following Years. (Special Commerce.)

N.B.—In this and following Tables the values are expressed in millions and thousands of francs; fractions of a thousand are not expressed in the items, but are included in the totals.

* Including Gibraltar, Malta, and the Ionian Islands.

2. The commerce of Belgium with foreign countries continues its ascending movement. *The aggregate value of the import and export trade* (special commerce) attained in 1863 the figure of 1,150,000,000 francs (46,000,000*l.*), the highest yet known, and nearly triple that of the period from 1848 to 1852. The "general" commerce of the same year, *i. e.*, the imports of all kinds, whether for home consumption, transit, or entrepôt, in conjunction with the exports of all kinds, whether of Belgian or foreign produce, amounted to an aggregate value of 2,060,000,000 francs (82,400,000*l.*), which exceeds by 5 per cent. the Return of 1862, and by 14 per cent. that of 1861. The dealings with Russia, the Zollverein, Portugal, the United States, and the Plata States, have decreased in 1863; those with Sweden, Denmark, the Netherlands, Great Britain, France, Spain, Switzerland, Hayti, Venezuela, Chile, and Peru, have increased. It is observable that during the three years both imports and exports show a constant progression, the former being uniformly in excess of the latter. This would once have been termed an adverse balance of trade, but is now more justly held to be an indication of profit instead of loss. The increasing wealth of this country is apparent to every observer. The gross commercial movement of 1864 has not yet been reduced to figures, but it is known to have surpassed that of any former year. The last estimates of the Belgian population make it 4,836,566 at the end of 1862, and 4,894,071 at the end of 1863. Taking the former figure as a divisor, the share accruing to each individual in the special commerce of 1863 would be 235 francs (9*l.* 6*s.* 6*d.*).

(No. 2.)—Statement of the Quantities and Values of the principal Imports of Belgium during the following Years. (Special Commerce.)

Values in millions and thousands of francs. N.B.—The Values are not yet procurable for 1864.

3. *The principal Imports of Belgium* are, with two exceptions, exclusively raw materials and food, viz., cereals, wool, cotton, coffee, flax, resinous substances, hides, manures, seeds, cattle, timber, metals, wine and sugar. Woollen and silk fabrics are the only manufactured goods imported to a large amount. In 1863 relatively to 1862 and 1861 the imports increased by 5 per cent. and 11 per cent. In 1864 a further increase of 10 per cent. above 1863 is observable in the imports of the principal articles of merchandise, especially in those of wool, flax, hides, woollens, oil-seeds, coffee, resin, linen yarns, oats, barley, butter, silks, iron-ore and rice. The great increase under the head of "resinous substances" is due to the sudden enormous expansion of the petroleum trade. This substance is now imported here duty free, and burnt in almost every household: 29,500 tons, representing a value of 16,000,000*l.* were imported in 1864, most of which was re-exported. Much labour is employed in clarifying this oil. Antwerp has become the principal emporium for it. Some decrease is perceptible in the imports of corn, meat, raw sugar, cotton, copper, flour and cattle. The *entrance duties produced in* 1863 15,500,000 francs (620,000*l.*), about 3 per cent. less than in 1862, and 3½ per cent. less than in 1861. The loss of revenue has been greatest on coffee, tobacco, rice, seeds, rye, cotton yarns and tissues, silks, heavy woollens, oil-cake, raw sugar and cattle. Coffee, tobacco, and silks recovered themselves in 1864.

(No. 3.)—Statement of the Quantities and Values of the principal and other Exports of Belgium during the following years. (Special Commerce.)

4. *The Exports of Belgium* rose in 1863 to 533,000,000 (21,320,000*l.*), being an advance of 6 per cent. upon 1862 and 100 per cent. on 1861. A further progress is visible in 1864, and an increase of 9 per cent. is recorded in the value of the principal exports. Every effort is made by successive Governments to stimulate this branch of trade. It is to be remembered that the above large amount is not all Belgian produce, for it includes large quantities of foreign raw materials which pass duty free through the country, such as flax, hides, petroleum, &c. The most valuable export of Belgium is coal. Then come, according to their order in 1863, woollens, linens, flax, hides, machinery, wrought-iron, arms, linen yarn, cattle, cottons, refined sugar, woollen yarn, butter, glass, raw sugar and horses. Among the exports of 1864 the principal increase has been in flax, woollen yarn, coal, rails, petroleum, woollens, candles, and cattle. A falling off has shown itself in refined sugar, arms, butter, seed-oil, meat, linens, and machinery.

5. *The Transit Trade* is divided into direct and indirect transit. The former includes all merchandise which traverses the territory without any detention. Indirect transit includes the goods sent to the entrepôts and afterwards re-exported; also those imported free of duty to be manufactured and re-exported. The transit trade fluctuates more than any other, and has not yet recovered the high figures of 1856 and 1857, which were 493,000,000 and 477,000,000. That of 1863 was 458,000,000, 5 per cent. more than 1862. Antwerp loses ground a little according as other railways converging to Cologne are completed. The privilege of working up foreign materials in bond under the Law of 1846 has now been extended by Royal Arrêté to 37 articles. Thus large quantities of iron, copper wire, yarns, corn, grease, oil, hides, rice, arms, machinery, tissues, timber, paper, and soda, come in and again pass out in more finished shapes.

6. The continued prosperity of the general *shipping trade* is clearly evinced by the above Table; British vessels obtained a full share of this traffic. Half the vessels entered at Belgian ports came from England, and nearly half are British. Two new steam-packet lines to Antwerp—those from Newcastle and Hartlepool—were opened in 1863. The list of Belgian merchant-vessels has continued as usual to dwindle away. In 1862 I described it as having reached its lowest ebb; but it has since (1863) fallen lower still, viz., to 103 vessels, measuring 27,247 tons. In that year 7 vessels were lost, 1 was launched, and 1 nationalized. Strong measures (which I shall advert to in another section) have been taken to revive this branch of trade.

7. *The Fishing Trade* is not progressing. It employs 275 vessels, mostly stout decked sloops of 40 tons burden. Most of them go in summer to fish for cod on the Doggersbank, some even to Faroe and Rockhall. They brought back much more fish in 1863 than in 1862, but realised much less money for it. The Doggersbank cod (considered the best) averaged only 32 francs per barrel of 145 kilos. net weight, therefore 20 per cent. less than in 1862, and 50 per cent. less than in 1861. The take of 1864 was about 4,000 barrels, therefore less than that of 1863, but the prices were 20 per cent. better. The same observations applied to the fresh fishing. The quantity was less, but the price better. The annual take of fresh fish is valued at about 50,000*l*. The State pays an annual subsidy for the encouragement of the fisheries. This was reduced by the Chamber to 74,500 francs for this year, and is to be gradually withdrawn. Last May some English boats came to fish for shrimps

on this coast, but excited the jealousy of the Ostend fishermen and were warne off.

Section B.—*Trade with Great Britain.*

8. The above Table is useful as showing the great expansion of *the import trade from England*, and the incipient effect of the new Tariff which came into operation in October. It would, however, be erroneous to suppose that the vast amounts of imports are exclusively of British origin or destined for Belgian consumption, although the above figures, extracted from the Official Tableau Général, represent the special commerce alone. I have shown in a former Report (July 1862) that there is no record of the real amount of that commerce, each of the two countries being a great medium of transit. As some clue towards eliciting the real amount of British produce consumed in Belgium I will now subjoin a Table founded on the Board of Trade Annual Statement. In analysing the imports from England some articles will be found to have increased and others to have receded in 1864. Among the former are flax, cotton yarns and tissues, pig-iron, coffee, cereals, oil-seeds and oil; and among the larter woollen and linen yarn, woollens, linens, coal, machinery, copper, meat, and petroleum. On the whole the imports from England have increased by 27 per cent. in 1863 above the preceding year.

(No. 7.)—Comparative Statement of the Quantities, Values, and Estimated Prices of the principal Articles of British Produce passing from Great Britain to Belgium in 1863, as recorded in the British Tables of Exports and in the Belgian Tables of Imports. (Special Commerce.)

British produce consumed in Belgium, according to estimate ..	..	..	1,454,037	..	..	..

9. My object in the above Table was *to compare the British statistics of exports with the Belgian statistics of imports*, so as to observe how far they differ from each other, and what is the real amount of British produce retained in Belgium. The existing data are very inadequate to show that amount accurately. The Board of Trade returns the exports of British produce to Belgium in 1863 at 2,107,332*l*. The Belgian statistics value the imports from Great Britain at 4,342,162*l*. Both these figures may be correct, bearing, as they do, on the special and not on the general commerce, and therefore on totally different quantities. The Belgian Tables show that 69 per cent. of the "general" imports from England were for Belgian consumption. It is fair to assume, therefore, that $\frac{69}{100}$ of 2,107,332*l*., or 1,454,037*l*., was the real value of the British produce consumed in Belgium in 1863. In analyzing the Tables of both countries they will be found to be drawn up on such different principles as to be hardly susceptible of comparison. The extreme discordance in the average prices set upon some articles is quite unaccountable, and shows how fallacious some of these valuations must be.

10. The above Table shows a large but not increasing *export trade from Belgium to England* in 1863. The difference in favour of this year was only 1 per cent. In 1864, however, a greater progress seems to be visible; for though the aggregate value of the exports is not yet known for that year, the quantities of most articles, especially of flax, cotton and woollen yarns, cotton, woollen, and linen tissues, wrought-iron, raw sugar, meat, glass, candles, seeds, rags, and paper have increased, while linen yarns, iron-ore, zinc, arms, butter, eggs, refined sugar, hops, and seed-oil have declined. The term "meat" includes the poultry and rabbits which are shipped in such quantities from Ostend. Of all Belgian shipments to England the first place as regards weight is occupied by fruit, the quantity being 17,626 tons for 1863, valued at 211,600*l.* England spends here 1,694,440*l.* in textile materials or fabrics; 1,138.360*l.* in food; 340,000*l.* in minerals and metals. All these articles are free of duty, with two sole exceptions. Consequently the relative quantities taken for home consumption and for transhipment in England can never be known, excepting for chicory and sugar. The chicory trade actually doubled in 1863, notwithstanding the increase of the English duty from 12*s.* to 26*s.* 6*d.* per cwt. (17th April, 1863.)

11. In the above Table the qualities of each article are reduced as much as possible to the same denomination. Great discrepancies are here apparent in the weights and values of almost every article. *Both the quantities and values are generally stated much higher in the Belgian than in the English returns.* The difference of quantities can be only partially explained by the extension given in the Belgian Tables to the term "England," which is there made to include Gibraltar, Malta, and the Ionian Islands. This source of confusion will, at my suggestion, be rectified in future statistics. There seems nothing to account for the higher standard of prices assumed in the Belgian Tables, for it is evident that in the case of exports the true standard of prices must be lower here than in England; the result is a difference of 1,849,000*l.* sterling in the two statistics, which shows a radical error somewhere. Among the exports from Belgium to England silk fabrics stand first in the order of value, and fruit in the order of weight. Of the latter, 24,190 tons were shipped in 1863; of the silks, the great bulk was French, German, and Swiss produce. Woollen fabrics come next in value, mostly for transhipment in England. This is not the case with yarns, which are nearly all Belgian produce. Our own returns make the quantities received still larger than those exported. Great anomalies are also apparent in the respective returns of cotton, flax, silks, chicory, refined sugar, candles, and horses. I now subjoin a retrospective Table, serving again to compare the two statistics, and to exhibit the vast growth of the international traffic since 1850.

(No. 10.)—Statement of the Commercial Movement between Great Britain and Belgium during the following years, according to the Belgian and British Tables, distinguishing the "general" and the "special" commerce, and showing the net value of British Produce consumed in Belgium, according to revised calculation.

* In Great Britain there is no record of the "Special" import trade, excepting the few articles subject to duty.

Section C.—*Commercial Measures and Desiderata.*

12. The leading event of the last two years was the *redemption of the Scheldt toll* by the Treaty of 16th July, 1863. That measure has been already briefly adverted to in my Reports of 1862 and 1864. The maritime nations generously combined to relieve the Belgian Treasury of an annual charge of about 76,000*l.* by a contribution raised among themselves, the English quota being 349,000*l.* At the same time (from 1st August, 1863) the tonnage duty was abolished and the pilot dues were reduced, at a loss to the treasury of about 40,000*l.* per annum. The dock dues have also been reduced, so that Antwerp, from having been one of the dearest, is now become one of the cheapest ports for navigators. That city is nevertheless in a chronic state of disaffection. Two maritime States yet hold out—Mecklenburg and the Argentine Confederation; their vessels are consequently charged with a tonnage duty in Belgian ports of 5 francs per ton. Few of them now come up to Antwerp, but they land their cargoes at Ternenze, whence they are borne by canal to Ghent.

13. The year 1863 was most prolific of *Commercial Treaties*, having witnessed the conclusion of such with France, Austria, Prussia, Chili, Denmark, Spain, Hamburgh, the United States, Bremen and Lübeck, the Netherlands, Sweden and Norway, Switzerland, Bolivia, and Brazil. Further Treaties with the Hawaiian Islands, Italy, Oldenburg, Hanover, and Portugal, were promulgated in 1864. The new Tariff has now been gradually extended to all civilized nations excepting Mecklenburg, the Argentine Confederation, China, and Japan. Still the vexatious formality

of a certificate of origin is maintained. A Bill will soon be brought in to extend the new Tariff (coupled with further reductions) to the world at large.

14. *The Franco-Belgian Tariff* was extended to England on the 1st of October, 1862, a year later than to France, and then with some restrictions on cotton yarns and prints, mixed fabrics of cotton and wool, and spirits. The definitive reduced rates came into operation on the 1st of October, 1864. It must not be supposed that even as yet the spirit of "protection" has disappeared. The new rates on woven goods and iron manufactures will still be protective. That on woollen is 10 per cent., but that on linens is 15 per cent. Those on cotton yarns and tissues will be much more intricate than before. The new Tariff fixes ten different rates on cotton yarns instead of ten as before, and twenty-eight on cotton tissues instead of ten. The new rates on cottons must be levied with the aid of a compass and a microscope. This obnoxious system has been adopted in deference to the French Government.

15. *The general incidence of the new Tariff* may be stated on an average at 10 per cent. on most of our manufactures, but it will virtually be much higher on manufactures of cast and wrought iron, pig iron, nails, rails, bar and sheet iron, linens, linen yarns, linen, woollen, and cotton hosiery, carpets, earthenware, brandy, refined sugar, many descriptions of cottons, bottles, beer, soda, paper, oysters, and salt. One duty very prejudicial to our manufacturers is the export duty on rags; viz., 12 per cent. per 100 kilos, 4 francs on old cordage. This is in great contrast with the liberal treatment accorded in England to every article of Belgian produce. The most effectual argument towards obtaining a repeal of this export duty would be the imposition of a temporary duty on Belgian paper equal to the Belgian duty on English paper, viz., 8 francs per 100 kilos, or 13*s.* per cwt.

16. A recent law, signed at Windsor on the 12th of April, 1864, allows the *free importation and nationalization of foreign-built vessels,* and remits all the duty on timber used in ship-building. Before that, the registration and import duties on a vessel of 1,240 tons amounted to 14,591 francs (584*l.*). This measure forms the complement of that signed on the 12th of July, 1862, allowing the free import of certain ship-building materials, viz., copper sheets and bolts, spars, ropes, canvas, and capstans. Another measure of the year 1864 may be mentioned, viz., the Royal Arrêté of the 31st of March, which suppresses the official *sealing of flax-seed barrels,* hitherto enforced as a guarantee of quality and quantity. The most important commercial event of 1864 was the *Convention of the 8th of November on sugar duties,* which shall be explained hereafter. The drawbacks on sugar were materially and repeatedly reduced. Foreign sugar has been admitted to be crushed in bond.

17. *The Superior Council of Industry and Commerce* was created by Royal Arrêté of the 27th of March, 1859. It is composed of two delegates from each of the Chambers of Commerce of Antwerp, Brussels, Charleroi, Ghent, Liége, and Mons, of one from each of the other eighteen Chambers, and of eight nominees of the Crown, in all thirty-eight members. Its attributions are to give advice on proposals emanating from the Government, from Chambers of Commerce, or from individual members. Its opinions, therefore, may be quoted as the highest authority on all commercial questions. For that reason I think it right to give a summary of the resolutions voted in their three sittings of 1864. They declare that there is no ground for soliciting, as suggested, the creation of a new Ministerial Department of Agriculture, Industry, and Commerce, or the transfer to the Foreign Ministry of the Division of Industry now annexed to the Ministry of the Interior.

18. *With reference to the Tariff* their resolutions are, that it should cease forthwith to be anything but a means of collecting revenue; that machines and raw materials must first be expunged from it, and then gradually all other articles which produce trifling sums; that taxation should be concentrated on a small number of articles, the Customs and Excise duties being always kept in harmony; that, as the absolute suppression of the Custom-house would act more energetically on the development of public wealth than any mere reduction, it is expedient that the Government should constantly tend to attain that end and seek for a practical solution of the financial difficulties of the question; that it would be unjust to augment the taxes on real property for the sole purpose of suppressing Customs and Excise duties; that the conventional "régime" should be at once extended to the world at large; that the Government should negotiate for the purpose of suppressing the vexatious certificate of origin; that the Customs' officers shall abstain as often as it safely can, from searching passengers' luggage.

19. *With reference to means of communication*, they recommend the completion and amelioration of the canal as well as of the railway systems; a reduction of tolls on canals and rivers; uniform depth, section and sluice-gates to be given to all navigable channels; the improvement of the Scheldt and Meuse; the construction of paved towing-paths; the encouragement of the use of horses, instead of men, for towing; the general application of the Law of 19th February, 1860, on canal tolls; the publication of a Canal Tariff, enabling the bargemen to pay all their tolls in advance for their whole voyage; the publication of a full statistical return of canal traffic.

20. *With reference to railways*, the Council declares that a great inequality at present exists among the different parts of the kingdom; that the intricacy of the Tariff is become a serious obstruction to business; that this is the consequence of small concessions; that in future it should be sought rather to increase the *réseau* of existing companies than to authorize the formation of new companies; that the State should take every opportunity of working adjacent lines; that differential Tariffs should be adopted, with rates diminishing according to distance and destination, so as to favour the export of heavy goods; that the Government should use all its influence to press upon companies the above liberal system of Tariffs.

The Government should also examine the questions of supplying special messengers for carrying letters, and stamps for franking small parcels by railway. I may here mention that the goods tariff of the State railway was thoroughly reduced in 1864.

21. *A further extension of the canal system* is, I think, of questionable expediency. It must be remembered that the Council represents a part of the nation, with whom it is becoming a dogma that the State should carry their goods for them more or less gratuitously, or even at a loss. Since 1830 canals have absorbed a capital of 76,000,000 francs, and virtually return next to nothing. The new canals can hardly pay their working expenses. None of them would be made if left to private enterprise. Few of them could compete with the railway if both were placed on a footing of equality. Their danger to life is ten times greater, as would be seen if the forthcoming statistical return has a column for the children and drunkards who perish in them by hundreds. Some 6,000,000 francs are here wasted on a mere superfluity. This would offer a means of relieving of half the really oppressive duties on sugar and salt.

(No. 11.)—Statement of the quantities of Raw Salt imported into Belgium from England, France, and other countries, according to the Belgian statistics, and of the quantities shipped from England to Belgium according to the British statistics.

22. *The salt duty* is certainly one which presses unduly both on the poorer classes here and on British trade. For this latter reason I have investigated the subject closely, and find that two of our grievances, which I exposed on 10th July, 1862, are still unredressed. Our flag is now treated on a footing of equality, and thus freights from the Mersey have been reduced to moderate rates. But, on the other hand, our white spring salt is virtually prohibited, being treated as refined salt, which it is not; and secondly, it is *bonâ fide* excluded (though nominally admitted duty free) from the Belgian chemical works, by the impracticable nature of the formalities required.

23. When the history of this question is studied the present treatment of our salt appears still more invidious. By the Treaty of 1851 English white salt was assimilated to raw salt for all purposes whatever. An outcry arose among Belgian refiners, and this main stipulation of the 1851 Treaty was relinquished by a Protocol of 5th March, 1852, quite gratuitously. It was then covenanted that white salt should still be assimilated to raw salt when imported for certain specified purposes, among others for the manufacture of chemicals. The spirit and even the letter of

this Protocol are now frustrated by a deposit or *cautionnement* being exacted from *every cargo* at the full prohibitory rate of 40f. 70c. per 100 kilogrammes, or 16*l.* per ton, as if it were refined. No merchant will run the fearful risk of being saddled with such a duty as this (twenty or forty times the value) on any deficiency.

24. There is no such obstacle to the imports of salt by rail from France. Consequently the whole of the salt used by the Belgian manufacturers of soda, about 12,000 tons, has been French crushed rock salt made in imitation of our spring salt. It is imported directly from the French mines in the Meurthe and carried by railway up to the factory door without breaking bulk and without any *cautionnement*. The French salt has another unfair advantage in being carried on the State railway at an exceedingly low preferential rate, and is thus pushing even our rock salt out of the market. Portuguese salt has suffered much more than ours. The salt duty here is 18 francs per 100 kilogrammes or 7*l.* 2*s.* 9*d.* per ton, which at the British valuation of salt (7*s.* per ton) is tantamount to *a duty of* 2,000 *per cent.*

25. There is another very important desideratum in the interest of English commerce; *i. e., an acceleration of the mail service between Calais and Cologne.* Every word which I wrote before, on the 10th of July, 1862, is still applicable to this subject, so it will be sufficient now to recall attention to the facts of the case. The British Government pays a subsidy to that of Belgium for maintaining the Ostend postal service. But the trains from Calais to Cologne, and *vice versâ*, are systematically delayed, to prevent that port from competing with Ostend. As a tangible proof of this inconvenience, it will suffice to state that Paris is ninety miles further than Brussels is from Calais, and, therefore, that the London mail might arrive here by Calais at least three hours before it reaches Paris instead of three hours later as at present. Here is, therefore, a daily delay of at least six hours in our communications with the whole North of Europe, for no ostensible motive. Eight hours and a half are allowed every night for the transit of the mails from the Dover to the Ostend railway stations. Nevertheless, it constantly happens that the packets are behind time, or do not venture to cross at all. Now that a new postal Treaty is contemplated, this subject deserves the attention of Her Majesty's Postmaster-General.

Section D.—*Sugar Duties.*

26. This is a question whose solution must be ranked amongst the greatest desiderata of Belgium, indeed of all Europe. It seems to have baffled the skill of every Government, as testified by the number of Laws, Treaties, Commissions, and even Congresses, which have undertaken to deal with it in vain. In France it has been compared to a shuttle-cock which is never allowed to rest, but is kept perpetually thrown about from one to another by the various contending interests—the farmers, the colonies, the ship-owners, the refiners, the consumers, and the Treasury. In my Report of the 31st of January, 1863, I attempted to describe the Belgian system of taxing sugar. The two years which have since elapsed have brought many changes in all countries, especially the important Convention of the 8th of November, 1864, between Belgium, France, Great Britain, and the Netherlands. This arrangement claims special consideration with a view to its bearings on British and Belgian interests. The following are the figures representing the trade between the two countries :—

(No. 12.)—Statement of the Unrefined and Refined Sugar passing from Belgium to Great Britain during the following years, as recorded in the Belgian Returns of Exports and the British Returns of Imports.

Quantities in English cwts. of 112 lbs., or 50·80 kilos.

	1856.	1857.	1858.	1859.	1860.	1861.	1862.	1863.	1864.
Unrefined Sugar.

27. One of the curious phenomena of the day is *the sudden demand for Continental beet-root sugar in England.* This trade with Belgium first began in 1858, and has now grown to the large figure of 96,490 cwt. The export of refined sugar to England is falling off in the same proportion, not that our demand is slackening,

but that Belgian loaf sugar is being everywhere undersold by that of France, which is protected by a greater bounty on export. English refiners must be pushed very hard, as their exports are declining and the imports of foreign refined sugar never were so great. There is evidently an opening in England for the manufacture of beet-root sugar, which is so lucrative an industry in this country.

28. *The great battle of beet-root* versus *cane* is going on here to the manifest advantage of the former. The year 1863 will be a memorable one for the sugar industry. In the beginning the markets were everywhere glutted, but the failure of the French crop changed the face of everything. The Belgian crop of roots was a fair one. The heat of the summer stopped their growth, but improved their saccharine richness. The result was the largest produce in sugar on record, officially 20,000,000 kilogrammes, but really about 21,500,000. Prices have suddenly doubled in France, to the great profit of Belgian manufacturers; 14,000,000 kilogrammes of their produce were carried off to France and England at high prices, about four times as much as the exports of the preceding year. The same activity continued through 1864. The number of factories goes on increasing; they were 69 in 1861 and 79 in 1863.

29. At the same time the imports of cane sugar are falling off every year, and the *refining trade is languishing* after a long period of artificial encouragement, being deprived of the bounty on export. The mean "rendement" of sugar, *i.e.*, the quantity assumed by law as a basis for the reimbursement of the duty originally charged on 100 kilogrammes of raw sugar, was till last August 81·081 kilogrammes. If by superior skill a yield of 90 kilogrammes could be realized, an amount of about 9 kilogrammes would remain to the refiner free of duty, representing a bonus of 5 francs per 100 kilogrammes exported, or $\frac{1}{4}d.$ per lb. In a great exporting country this bounty might absorb the whole revenue, so the law has provided a most ingenious mechanism for keeping up the revenue to a legal minimum by limiting the exports and by a sliding scale of drawbacks. The contingency predicted in my Report of 1862 has since occurred, and the drawbacks have been three times lowered, in August, November, and the present month. In conjunction with the present duties they now represent rendements of 87·8 on home-grown and 90·12 on foreign sugar, which can leave no bonus on export.

30. *The French rendements* on middling sugars are 79 kilogrammes in fine loaves and candy, 89 in lumps. On the higher qualities of raw sugar (No. 13 and upwards) they are 83 and 84 kilogrammes. Assuming 85 kilogrammes as the average true "rendement," the French refiner would thus always enjoy a bounty on export, of course varying with the qualities of sugar and processes of manufacture. This situation acts prejudicially on the refining interest here, and, strange to say, also on the metallurgical interest. Italy was one of the best customers for Belgian sugar and iron. Ship-owners will not fill their vessels with iron, and want sugar to complete their cargoes to Italy. According as Belgian sugar is pushed out of that market by French sugar, the freight of rails is enhanced, and in the iron trade freight is everything.

31. *The Convention of 8th November*, 1864, is chiefly directed towards placing the drawbacks on a uniform basis in the four contracting countries. It first divides raw sugars into four classes, according to the Dutch series of types, and lays down the following provisional basis for the official minimum "rendement" of 100 kilogrammes of raw sugar:—

Nos. of the series of Dutch types.	Refined sugar in loaves.
1st class, Nos. 15 to 18 inclusively	87
2nd „ 10 to 14 „	85
3rd „ 7 to 9 „	81
4th „ below No. 7	76

The intermediate shades between two classes are to belong to the lowest class.

32. *It is provided that the above scale shall be modified,* in accordance with experiments to be jointly instituted by delegates of the four Governments with different qualities of sugar. The entrance duties on refined loaves and on crushed sugars ("poudres blanches"), assimilated to refined, imported from one of the four countries into the other, shall not be higher than the drawbacks paid by the latter on the export of pure refined sugar ("mélis"). In France the import duty is to be 15 per cent. higher than that on the first class of raw sugar. This proportion may, however, be altered hereafter in the inverse ratio of the "rendement" to be definitively established. The duty on candy may be 7 per cent. higher than that on other refined sugar. Bastards are assimilated to raw sugars. Until the establish-

ment of the definitive scale, the above temporary scale of "rendements" is not to be compulsory on England, but Her Majesty's Government undertake at once to reduce the present drawbacks on the export of refined sugar by 6*d.* per cwt., and to maintain the ratio which will then exist.

33. *The "prise en charge" in sugar factories* which are "abonnées," shall be raised at once to 1,475 grammes per hectolitre of juice of 1 degree of density, at a temperature of 15° centigrades. It shall be fixed at 1,500 grammes as soon as the annual production of Belgium shall have attained 25,000,000 kilos. The sugar produced in these factories shall be, for the purpose of duty, assumed to be that between Nos. 10 and 14 (second class). The four Governments are to draw up by common accord, and to revise periodically the types necessary for carrying out this arrangement. They are also to concert measures for obtaining the adhesion of other Governments.

To explain the system of taxation in both countries, and the effect of the Convention, I now subjoin the following :—

(No. 13.)—STATEMENT showing the Present and Future (Provisional) System of Duties and Drawbacks on Sugar in Belgium and Great Britain, the estimated Home Consumption, and the net Revenue derived from Sugar in each of these Countries.

* In Belgium the excise duty on all raw sugars is 45 francs per 100 kilogrammes. Foreign sugar pays an additional Customs duty of 1 franc 20 centimes, making in all 46 francs 20 centimes per 100 kilogrammes.

† The official Return of the average consumption of refined sugar and treacle for the three years ending 30th of June, 1864, is 14,664,052 kilogrammes; which is equivalent, according to the official estimate of 3 per cent. waste in refining, to a *legal* consumption of 15,117,580 kilogrammes, or 302,751 cwt. of raw sugar, avowedly less than the *real* consumption.

‡ The population of Great Britain was estimated, in 1863, at 29,500,000; that of Belgium at 4,836,000.

34. This Convention will leave each State free to modify its duties at pleasure, on condition of establishing *four classes of raw sugars*, the duties and drawback on each to be co-relative to each other in every State. Belgium has yielded unwillingly to the system of types or standards for sugar. The Dutch scale of types and every other founded on whiteness must be indefinite, and even deceptive. Sugars differ in the nature as well as the intensity of their colours. A yellow sugar cannot well be classified by a set of brown standards. Moreover, richness and whiteness are not always proportionate. A single duty on all sugars, when fixed at so high a rate as in Belgium, is also open to objection, as excluding the lower qualities. This might be obviated by giving to importers the option of paying an *ad valorem* duty.

35. *The difficulty of taxing beet-root sugar* is perhaps the greatest of all. In Belgium the duty is based, not on the quantity of sugar actually produced as in France, but on the quantity of juice pressed through the defecating pan. Every hectolitre of juice of a certain density and temperature is officially assumed to yield

1,400 grammes of sugar, and pays accordingly. There is here a large margin for profit. In France, the average yield for five seasons has been 1,473 grammes; in Belgium certainly higher, probably 1,500 grammes. Thus 100 grammes, or 6·66 per cent. of the sugar manufactured, escaped the duty. This is exactly equal to a bonus of 3 francs per 100 kilos, and reduces the real duty to 42 francs instead of 45 francs which is nominally paid by beet-root sugar. According to these data the produce of 1863 must have been, not 19,965,701 but 21,391,000 kilos, and the consequent loss to the Treasury, 641,700 francs. There is here a vast leakage, which vitiates all calculations, and disturbs the whole economy of the Belgian sugar system. The official figures of production and consumption are avowedly mere fictions. Thus the official consumption of sugar, *i.e.*, the quantity subject to duty, has dwindled down to 7,500,000 kilos in 1863, or $2\frac{6}{10}$ lbs. per head, while the French consume 15 lbs., and the English $35\frac{8}{10}$ lbs. The new "prise en charge" is to be 1,500 grammes. The French system of "exercice," the only equitable one, has been examined by this Government, and renounced as impracticable for Belgium.

36. *The Belgian system of sugar duties*, originally conceived in 1849 and copied by the Netherlands, is now established as follows. The refiners and "fabricants-raffineurs" (a legal term designating those manufacturers of sugar who, though not refiners at all, declare their produce for export), enjoy a credit of from four to six months for discharging their excise duties. This discharge must be effected either by payment in cash, or by the export of a corresponding quantity of sugar. The minimum revenue is fixed at 1,500,000 per quarter. If this is not attained by the primary action of the law, the deficiency is levied rateably upon the refiners according to the duties debited to each in the Treasury books. This amount must be paid up at once in cash, and cannot be discharged by export. If the "prises en charge" inscribed are not sufficient to cover the deficit, the amount wanting is again levied on the refiners, this time in proportion to the drawbacks realised by each during the preceding quarter. The sums thus levied are carried over to the credit of the refiners as an advance on their duties payable in their future accounts. If for two consecutive quarters these "manquants" exceed 500,000 francs, the drawbacks are lowered proportionately by a sliding scale. This last resource has been resorted to during each of the last three quarters. All this ingenious mechanism is based on the principle that it is the export of sugar which exhausts the revenue. Therefore a series of three successive checks is provided for arresting that export when necessary.

37. To elicit *the real loss to the Treasury entailed by the present system* is a problem which defies calculation. Some 22,000,000 of duties became payable in 1863, of which 16,000,000 were refunded to the trade. What proportion of this sum was above the amount equitably due, and therefore constituted a bonus on export at the expense of the public, must for ever remain a mystery. As an attempt to solve it approximately, I submit the following calculation:—

	Exports.	Drawbacks.		Estimated Bonus.	
	Kilos.	Per 100 kilos.	Paid.	Per 100 kilos.	Total.
Bonus on Refining.			Francs.		Francs.
Loaf-sugar, exported	16,032,013	55·50	8,897,760	2·25	405,121
Candy ditto ditto	1,955,596	60·	1,183,300		
Bastards ditto ditto	17,890	45·	7,944		
Bonus on "prise en charge."					
On the above refined sugar, total 18,000,000 kilos, representing a proportion of 20,000,000 raw sugar, of which one half native.. ..	..	..	..	3·	300,000
On unrefined sugar exported ..	13,979,934	45·	6,290,969	3·	419,397
Total	31,985,433	..	16,379,873	..	1,124,518

The real loss of revenue is here certainly understated. Another calculation makes it more than double the above sum of 1,124,000 francs. England consumes 18 kilos of raw sugar per head of the population; France and Holland over 7 kilos; the poorest nations will be found to consume at least 4 kilos. This latter figure, if applied to Belgium, would give a consumption of 19,576,000 kilos, and a revenue of 8,809,200 francs. As only 6,000,000 now enter the Treasury, the inevitable, and I believe the true, inference is, that 2,809,000 francs of the public money are thus lost.

38. *The Bill now before this Parliament for ratifying the Convention of* 1864 retains

the legal minimum reserve and the principles of the Law of 1849, but simplifies the process of recovering the revenue. In future, if in any quarter the minimum is not realized by the primary action of the law, the deficiency, instead of being levied at once in cash and even retrospectively, is to be carried over to the debit of the refiners for the following quarter. The Customs duty of 1·20 francs on foreign raw sugar is to be repealed whenever the French "surtaxe" of 2 francs on foreign beet-root sugar shall be abandoned. The prohibitive duty of 90 francs on foreign treacle and syrup is to be immediately reduced to 15 francs This new system will diminish the protection enjoyed by Belgian producers, but will compensate them by freer access to the French market. It is also expected to work well for the revenue, and to produce the legal minimum by its primary action without any "répartition."

39. The Convention lays down the just principle of suppressing all protection and favours on import and export, and postpones the final settlement of the drawback question till the result of experiments which are to reveal the true "rendement" of sugar. Some months, or perhaps years, must elapse before this consummation is achieved. This delay fortunately affords an interval during which to reconsider the *principle on which a drawback should be based.* No scale of "rendements" can ever be critically accurate. If ever a perfect equilibrium were attained for a year, new arts and manipulations would soon creep in to undermine the economy of the whole system. A true scale of "rendements" being out of the question, the only choice is between a maximum and a minimum scale. The yields of sugar in the factory and the refinery must vary *ad infinitum.* To attempt to reduce these yields to one or more average figures is attempting to solve an insoluble problem.

40. From a morbid dread of taxing exports, Belgium has fallen into the opposite extreme, and has been giving away millions of the public money to keep up an artificial export trade. Is it desirable for other nations to adopt this course? *The new temporary scale adopted by the Convention certainly leaves a large margin for undue profit.* If this scale were made permanent, sugar would be cheapened for export at the public expense, each country would refine for its neighbours, and an artificial traffic would be created. Every resource of science and of fraud would be directed towards securing a bounty. Great temptation would be given to adulterate sugar for export. Serious interests would be dependent on the integrity and science of revenue officers.

41. If an immoderate taxation of sugar is still to be maintained, the proceeds should at least all go into the Treasury, and none into the pockets of private speculators. The only means of effecting this is *the adoption of a maximum scale of "rendements," precluding all possibility of a bounty.* If the choice is between a bounty and a tax upon export, the last is incomparably the lesser of the two evils. The Belgian refiners now bear a "rendement" of 90 and 88 per cent. The new provisional scale of 87, 85, 81, and 76 per cent. would therefore seem to be too low, and might well be raised by 5 per cent. If this were found to interfere with the refining trade, any refiner might be allowed to refine in bond, on paying all the expenses of supervision. As this would be optional, no hardship could be complained of. The bonded refineries would freely import and export any quantity of sugar, and would pay duty only on what they declare for home consumption. The duties are so high in Belgium, that the Treasury cannot afford to refund them approximately. Every mistake becomes too onerous to the public. A high scale of "rendements," combined with the privilege of refining in bond, would obviate all injustice.

42. *The best solution of all would be a radical reduction of the duty.* Sugar has two special claims to this favour, first, as a great raw material of industry; secondly, as an article of food competing with spirituous liquors. If the duties were generally reduced to two moderate rates of, say 4*s.* and 6*s.* on raw and refined, say about 20 per cent. on the value, all inequitableness would disappear, and a fair revenue would still be collected. The Belgian duty of 17*s.* 10$\frac{1}{4}$*d.* per cwt. amounts to 87 per cent. on the official average prices of sugars imported from Belgium to England in 1863, viz., 1*l.* 0*s.* 6*d.* per cwt. Yet in a beet-root country like this, on account of the additional difficulty of assessing the duty, it ought to be exceptionally moderate.

I have, &c.

Report by Mr. Rumbold on the Penal Laws of Switzerland	March	——	165

Switzerland.

Report by Mr. Rumbold, Her Majesty's Secretary of Legation, on the Penal Laws of Switzerland.

Berne, March 1865.

THE Penal Laws of Switzerland afford a curious subject of inquiry, partly in reason of their antiquity, partly on account of their great variety. Not only the 22 Cantons composing the Confederation, but each of the two divisions of the Cantons of Appenzell, Bâle, and Unterwalden, possess distinct laws; and even where they have laws in common apply them differently. Thus we have 25 distinct systems of Criminal Legistation, varying both in growth and in spirit, and extending from the ancient laws, or more properly customs, of Unterwalden and Glarus,* based upon tradition, and upon the Statutes of the old German Empire, down to the modern Laws of Aargau and Thurgau, or the French Code Pénal of 1810, still obtaining at Geneva and in the Bernese Jura.

The only period in Swiss history where one penal code existed throughout the country was that of the short-lived Helvetic Republic. This Penal Code of 1799, based upon the French "Code des Délits et Peines" of 3 Brumaire, an IV (October 25, 1795) was chiefly remarked for its harshness, and was abandoned by the Cantons for their own more ancient customs at the overthrow of the Republic. It continued to subsist only in the Cantons of Berne and Solothum. The latter Canton adopted a new code in 1859, and the former is now engaged in a reform of its Penal Laws.

A study of so comprehensive a subject as the one I am dealing with would far exceed the limits of this Report, and would tax even the special knowledge of a lawyer; and I shall, therefore, confine myself to an examination of the laws of Switzerland as regards Capital Punishment, hoping thus to show the effect produced upon crime in different parts of that country by the varied operation of those laws. The subject of capital punishment has lately engaged the attention of many of the Governments of Europe, and I am induced to take it up by the belief that although the small extent of the Confederation allows of no experience on a large scale, it may yet be interesting to state the results of the legislation of the different cantons, especially as regards the crime of murder.

It cannot be denied that the current of public feeling in Switzerland at the present time would appear, at first sight, to be tending towards the suppression of capital punishment. But although in most Cantons that punishment might be said to be virtually abolished, executions becoming daily more rare and pardons being granted even in the most extreme cases, still two Cantons alone have hitherto ventured to carry out to its utmost limits what would seem to be the desire of the whole Swiss nation, by striking the dread doom of death out of the provisions of their penal codes; and to this point I am particularly anxious to draw notice. The experience of one at least, if not both, of these Cantons has proved so unfavourable to the advocates of the suppression of capital punishment that it would appear as though no other Canton ventured to follow the example. Thus whilst, as I said above, the law which punishes certain crimes with death is hardly ever carried out indeed, in some Cantons seems destined never again to be carried out—a feeling which might almost be called superstitious still appears to pervade the public mind to the effect that the simple maintenance of capital punishment in the Statute Book even though it be but a dead letter, will yet continue to act as an effectual preventive

* Some of the laws and customs of the Forest Cantons are most peculiar. They prescribe for certain offences various degrees of corporal punishment, exposure in the pillory, public penance in the churches, &c. At Noi, according to an ancient custom, the Juge d'Instruction may compel the offender to confess by fasting and by the infliction of ten blows with a stick ("stockschläge").

to the heinous crime of murder. At the same time it must be admitted that the practice of many of the Cantons who have maintained capital punishment goes far to support the arguments of the opponents of that punishment by giving a spectacle more revolting to human nature, one would think, than even the sight of a public execution—that of the worst class of murderers being released by successive pardons and resuming their place in the world by the side of the families of their victims. Where a sentence of death can so easily be commuted into a minor punishment and this again be annulled by an absolute pardon, it seems, may well say these opponents of capital punishment, a lowering of its dignity for the State to reserve the right of decreeing a punishment it is impotent to carry out.

Without wishing to impugn the character of Swiss justice, or the morality of certain Swiss communities, it were easy to quote instances of recent trials for murder where the lenity of the sentence and the abuse of the prerogative of mercy can hardly be explained otherwise than by a curiously morbid state of the public feeling on this subject of capital punishment.

Striking proofs of the existence of such a feeling are given in some of the official answers made by the Cantons to certain questions lately put to them by Her Majesty's Government respecting capital punishment. The Government of St. Gall, for instance, makes a curious statement of the sentences of death passed in that canton since 1840. They were seven in number, of which four were for murders committed on relatives. On one occasion only was the sentence carried out; the criminal being a man who had, in concert with his wife and daughter, murdered his son-in-law. The sentence on the two women was commuted to imprisonment in the "Zuchthaus," or Convict Prison. Further the Government of St. Gall states that out of three cases where sentence of death was passed, the punishment in two instances was reduced to confinement in the Zuchthaus for life, whilst in the third instance the sentence was first commuted to confinement in the Zuchthaus for twenty years, and the criminal was further completely pardoned after undergoing fifteen years of the sentence. The Government of St. Gall concludes its answers by the following quaint remark, "The prerogative of mercy is exercised by the Grand Conseil in the most humane manner."

At Zurich a case occurred lately where the murderer, who had confessed and had been sentenced to death, was granted his life by the Grand Conseil on the singular plea put forward by his legal adviser that the notions of right and wrong obtaining in modern society were so vague that an ignorant man like the criminal could not be held accountable for an action the guilt of which he could not realize. It is right to observe that in this Canton of Zurich the most advanced views in political and religious matters are held by the Government of the day, and doctrines bordering upon infidelity are with the sanction of that Government publicly preached from the pulpit.

The causes of the feeling against capital punishment and of the ease with which pardon is granted in extreme cases are not difficult to arrive at. In the majority of the Cantons where criminal codes of recent date have replaced the obsolete laws of the defunct German Empire, these feelings are doubtless due to a reaction against the severity of an ancient legislation which viewed every degree of homicide and theft, down even to certain cases of larceny, in the light of capital crimes; but in nearly all the Cantons the explanation should perhaps be sought in the exercise of the prerogative of mercy by the Grand Conseil, as the representatives of the people to whom all sovereign rights appertain. A majority of two-thirds of that body is competent to commute the sentence of death to any lesser degree of punishment, and indeed to grant a free pardon; and in small communities like those of Switzerland it is difficult to overrate the facilities thus afforded to the friends of the criminal of working in his favour with individual members of the Assembly, which has to decide upon his appeal for mercy.

One murder committed last year at Zurich deserves special mention here. The criminal, a youth of 19, had poisoned his father, mother, and sister, the latter recovering miraculously. Proof being complete and he himself confessing to the deed, he was sentenced to death, and appealed for mercy to the Grand Conseil. The sentence was commuted by a large majority on the ground of his youth. When sure of his life he was heard to boast that after twenty years' confinement (convicts sentenced for life in the Canton of Zurich being in practice invariably released after that period) he should come out a rich man, since his property would have accumulated meanwhile in the hands of the Tribunal. The authorities apparently viewed

the matter in the same light as he did, for an enactment was made specially to meet the case, by which as a parricide he was debarred from inheriting, and the property was handed over to his sister and intended victim.

It is impossible to regret the ancient Code known as the "Carolina"* (from the Emperor Charles V, by whom it was promulgated in 1532), for, like some of our own statutes of old, its provisions were written in characters of blood; but it may well be questioned whether the application, as exemplified above, of the humane modern codes which have replaced it in most Cantons is not to be deplored in a moral point of view, and whether an age which tolerates such indulgence to crime is not as much open to the reproach of morbid over-sensibility as the darker age which looked with indifference on the thumbscrew and the rack was amenable to the charge of an utter callousness to human suffering.

A third cause of pardon, or at least of the awarding of minor punishments, is to be found in two principles of old German law, which the modern codes of Switzerland have in general retained, concerning the nature of evidence in criminal trials and the confession of the accused. I believe these two points, on which our own system and the German entirely differ, gave rise to much of the misconception with which a recent trial and execution in England were viewed by the more enlightened portion of the German and Swiss public. The law of the Cantons of Lucerne, Schwyz, Appenzell, St. Gall, Aargau, Thurgau (and till recently that of Berne), requires that in case of non-confession a person convicted of murder should be condemned to a minor punishment than that of death, and it further considers mere circumstantial evidence ("Inzichten" or "Indizienbeweis") as insufficient to justify the execution of a sentence of death. The official answers of the Canton of Aargau above quoted give an instance of a murderer who had been sentenced to death, but whose sentence was commuted to confinement in the Zuchthaus for life, not on account of any extenuating circumstances but on the strength of the evidence against him not being direct but circumstantial, and his persisting in declaring his innocence of a crime to which when reprieved he immediately confessed. The belief that a steadfast denial of the crime will always prevent the execution of a capital sentence continues to be very strong in the lower classes, even of those Cantons where the law has been modified; and in the Canton of Berne, for instance (where probably the severest justice is administered), murderers have been known to be buoyed up by it till the last moment.

Two Cantons alone out of the twenty-five have suppressed capital punishment, those of Fribourg and Neuchâtel. The Canton of Fribourg came to this resolution in 1848, and has therefore an experience of seventeen years to show. I quote the words used by the Government of this Canton in the official answers already referred to:—"Depuis 1848, époque où la peine de mort a été abolie dans le Canton, les crimes auxquels cette peine était appliquée paraissent avoir augmenté en nombre. On ne peut cependant affirmer que cette augmentation soit uniquement le résultat de l'abolition de la peine de mort; elle est sans doute le résultat de plusieurs causes diverses."

This was so striking an admission, notwithstanding the attempt to qualify it in the latter sentence, that I was induced to make further inquiry on the point. Taking the year 1848, that in which this radical change in the law took place, as the basis of calculation, I requested to be furnished with a comparative statement of the number of capital crimes committed in the Canton from 1830 to 1848, that is, during the eighteen years that preceded the abolition of capital punishment, and of the number of the same crimes committed from 1848 to the present day. Although the sad experience of Fribourg is freely quoted in Switzerland by the advocates of the maintenance of capital punishment, I confess I was little prepared for the following answers, which I copy from the reply of the Department of Justice of the Canton:—

"*Période de* 1830 *à* 1848 *exclusivement.*—Meurtres, 26 (il faut entendre par meurtres les assassinats, homicides, infanticides, et empoisonnements).

"Condamnations à mort, 12.

"Exécutions, 3 (toutes trois en 1832).

"*Période de* 1848 *à* 1864 *exclusivement.*—Il s'est commis durant cette période 47 meurtres. Les meurtres commis en 1864 ne sont pas compris dans ce tableau, les données manquant à cet effet."

* The "Constitutio Criminalis Carolina" never had force of law, properly speaking, in Switzerland, but was used as a guide by the judges. It was, however, the law in force in the Swiss regiments in the French and Spanish services.

Putting the annual average of murders committed in the latter period of sixteen years at 3, and adding that number for the year 1864, we may thus assume that 50 capital crimes have taken place in Fribourg in the course of the seventeen years that have elapsed since the suppression of the punishment of death as against 26 committed in the nineteen years that immediately preceded the adoption of that measure. The worst class of crime has therefore more than doubled since the highest human penalty is no longer exacted. In order fairly to state all the circumstances of the case, I must point out here that the Canton contains, according to the census taken on December 10, 1860, a population of 105,523 inhabitants. The increase since the previous census, taken in 1850, amounted to 5,632 inhabitants, so that the augmentation of the population cannot account for the multiplication of crimes. I may add that by far the greater proportion of the inhabitants profess the Roman Catholic faith, the number of Catholics being 89,970 as against 15,522 Protestants. As regards education, the proportion of school-attending children is as 1 to 9, whilst in the Protestant Cantons it is as 1 to 5.

But there is another point in the above-quoted answer well deserving of notice. For sixteen years previous to 1848 no sentence of death had been carried out in the Canton; and, judging from the practice of other Cantons, capital punishment had become a dead letter. The change might therefore have been expected to produce but little, if any, effect. Hardly, however, had it taken place when crimes of the most atrocious description were committed, and public opinion in Fribourg was so alarmed that petitions were addressed to Government for the re-establishment of the old law. Amongst others a most horrible murder took place at Murten, and the whole district demanded the execution of the assassin.

So marked was the reaction in favour of a return to the ancient legislation that I find it quoted with great force in the debates which lately took place in the Grands Conseils of the Cantons of Ticino and Berne on the subject of a reform of their respective criminal codes. In the discussion in the Grand Conseil of Ticino (May 12, 1863) the Committee reported against the abolition of capital punishment, but in favour of its restriction to the sole crime of murder; and the reporter, after pointing out the special danger of the Canton arising out of its immediate vicinity to Italy, as proved by the large proportion of crimes committed by foreigners (Italians) on Ticinese soil, a danger which would be undoubtedly increased if the law were deprived of its chief terror, went on to say, "Let us not expose ourselves to being placed in the humiliating position of the Canton of Fribourg, where petitions are being made for the re-establishment of capital punishment on account of the atrocious misdeeds which followed its abolition."

Ticino, again, is a Canton where executions have yearly become more rare, only two having taken place since 1840. The criminal code, on the other hand, is one of the severest in Switzerland, and bears curious vestiges of the theory of intimidation known in Germany as the "Feuerbachsche Abschreckungs-theorie." For instance, the murderer in certain aggravated cases is led to execution barefoot, with a red shirt and a black veil, and his head is exposed till sunset, with an inscription stating his name and origin and the circumstances of his guilt.

In the debate which took place in the Bernese Grand Conseil on the 2nd February, 1864, on the Report of a Committee charged with a project for the revision of the Penal Code a very remarkable speech was made by the reporter, M. Manuel. The majority of the Committee were in favour of the suppression of capital punishment, but the arguments used by this speaker on behalf of the minority opposed to such suppression carried such weight with the Assembly that a resolution in this sense was passed maintaining that punishment. The division showed 128 votes as against 47; 131 votes were further given in favour of the guillotine being substituted for the sword and 29 against. It was further agreed that executions should in future take place privately within the precincts of the prison.

A summary of M. Manuel's speech may not be out of place here :—

He argued in favour of sentence of death being awarded in cases of wilful murder alone, and no longer applied to crimes committed in the heat of passion, in brawls, or under the influence of any excitement disturbing the mind, as in cases of infanticide. He maintained that murder being a crime of a peculiar nature—quite distinct from all others—called for a punishment which likewise differed from all others. He quoted Bentham, Filangieri, and Kant, in favour of such punishment, and maintained that the fear of retributive justice was the greatest preventive of

the crime of murder. There was no denying, he said, that the population of the Canton of Berne, especially the peasantry, who were anxious for the safety of the country roads as they went on their lawful occasions to and from their lonely cottages and homesteads, were much opposed to any change in the law. Not a single petition had been made in favour of such change.

As an instance that murderers themselves acknowledged that death was their due, and the fear of death the only effectual preventive of their crimes, he quoted the case of an Italian who had successively committed three murders, and before his execution for the last declared that he was answerable for the first deed only, the responsibility of the two last resting with the Judges who had not sentenced him to death in the first instance. In the words of a German writer the case should be put thus: "Have the State, have the authorities the right not to condemn a murderer to the loss of his life?" For, as an Italian critic of Beccaria observes, "the innocent should never be placed in a worse position than the guilty; and this would be the case were an innocent man murdered and his murderer allowed to live." The natural law or law of nature gives the offended a right to avenge his wrongs—(the custom of duelling is a remnant of this law); society, however, when once organized, in assuming the rights of individuals in this respect, has undertaken the duty of avenging their wrongs and of avenging them in a just spirit. We may then suppose that in a State which should not award proportionate, that is, just punishment, and which should display a culpable tolerance of crime, individuals would relapse into habits of private revenge, which not being checked by the fear of retributive justice would lead to a condition of barbarism.

Finally the speaker quoted some words used in the debates which had taken place in November 1842 in the "Grand Conseil" of the Canton of Vaud on the reform of the Penal Code:—"If it should be considered that murder cannot be effectually prevented except by capital punishment, then on no account ought many innocent lives to be imperilled for the sake of preserving one guilty one."

Neufchâtel being the only other Canton where capital punishment has been abolished I was most anxious to get answers from it as conclusive as those furnished by Fribourg. I failed, however, in my endeavour. From 1830 to 1848, when the Canton was under Prussian rule, no criminal statistics were kept, and the only fact I could obtain on the subject was that no execution had taken place during that period. In 1848 the same change in the law took place as at Fribourg, but it appears to have been attended with less disastrous results. The population of the Canton is industrious and orderly, and assassination appears to have been of rare occurrence at all times. It is deserving of note, however, that immediately after the suppression of capital punishment, a most dastardly murder, preceded by rape, was committed in the town of Neufchâtel itself, and that the same manifestation of public indignation took place as at Fribourg. The Neufchâtel authorities further admit that there has been a notable increase since 1848 in the use of the knife in wine-shop brawls.

As a great contrast to the practice of Fribourg and Neufchâtel I may quote here that of Berne. As above stated, the old Helvetic Code (which is at this very time undergoing revision) is the law of the Canton, and deals very severely with capital crimes. I find, then, that in the period between 1830 and the present day, 159 individuals have been brought to justice at Berne for crimes punishable with death. Out of this number 31 were sentenced to death, and 128 to minor punishments. Of the 31 condemned to death 23 underwent the sentence, and in the case of 7 others the punishment was reduced by the Grand Conseil. The eighth criminal escaped execution by committing suicide in prison. The number of capital crimes committed is, however, not correctly represented by the above figure of 159, since in several instances more than one person was engaged in the committal of the same crime. The population of the Canton of Berne, according to the last census, amounted to 467,141 inhabitants. The yearly average of capital crimes would thus appear to have rather exceeded 4, whilst at Fribourg since 1848 the same average during 17 years reaches the annual figure of 3. It cannot, I think, be denied, that a comparison between the respective populations of the two Cantons shows a striking result in favour of the Bernese system. Here again, however, must be borne in mind the difference of religion and the wider diffusion of education at Berne.*

* In this Canton many crimes may be attributable to the singular custom of "kiltgang," which consists in the young peasants going the round of the villages at night in search of the young girls, from whom they later select their wives.

Next to death the severest punishment in Switzerland is that of confinement in the "Zuchthaus," or convict prison (with hard labour), for various periods. In most Cantons when a sentence of death is commuted, the punishment that takes its place is that of confinement for life. In the severer codes this punishment is aggravated by the wearing of irons, but in few Cantons is the penalty ever fully carried out. At Zürich, as above stated, 20 years' good conduct insure a release, and after that period the convict is either banished from the canton or interné, that is, confined to a given district. At Lucerne a sentence to confinement for 24 years is considered equivalent to the capital sentence. At Uri when two-thirds of a sentence have been undergone, the rest is remitted as a rule. At Solothurn, under a modern code of 1859, the maximum of punishment that can be awarded in lieu of death is confinement in the Zuchthaus for 20 years. At Bâle Ville the sentence of death is commuted to confinement in irons for 24 years, and in Bâle Campagne under similar circumstances the punishment is generally reduced by the Landrath to one-half of the same period or 12 years. At Appenzell 20 years' Zuchthaus is the usual maximum of punishment. In the Grisons, on the other hand, since the new code of 1850 a sentence to confinement in irons for life is always carried out in full. Previous to 1850 neither the people nor the Grand Conseil of this Canton seem to have been inclined to mercy, and executions were not uncommon. Thurgau is the only Canton where the punishment of solitary confinement has been introduced, and when a sentence of death has been commuted by the Grand Conseil to such punishment, it is always carried out in full.

The smaller and poorer Cantons, such as Uri, Schwyz, Zug, &c., possess no convict prisons, and their criminals are sent to the establishments belonging to their wealthier neighbours, against payment of the expenses of their keep. Most of the important Cantons have convict prisons. That at Geneva was lately pulled down to make room for some embellishments of the city, and the Government of Geneva has by agreement temporarily distributed its convicts between the prisons of Berne, Lucerne, and Lenzburg (Argovie). I know of only four penitentiaries in Switzerland, viz., those at Lausanne, Berne, Geneva, and St. Gallen. In all these, excepting that at Berne, the silent system (or that of Auburn) is in force.

The life of the convicts in the Canton of Berne cannot up to the present time be said to have been a hard one. They are all, even including the worst class (who are, however, distinguished by a peculiar dress), employed at out-of door labour; during harvest time they are let out at a fixed price to the farmers and country people; they are well fed and clothed, and a certain daily per-centage (about 30 centimes, or 2½*d.*) out of the sums paid for their labour is kept back on account of each and handed over to them at their release. They would thus seem to have every inducement to good conduct, and the certainty of a sum of money with which to begin life afresh at the end of their confinement. They appear to be contented with their lot, and may daily be seen at their work in the town and neighbourhood of Berne in charge of one or at most two guards, whose vigilance they are hardly ever known to attempt to elude.*

The same remarks applied till recently to the prisoners in other cantonal convict jails, and it may safely be said that there were worse lots than that of a Swiss convict under such a system. In all the other Cantons, however, in-door prison labour has of late years been introduced, and in the new Penal Code actually under discussion in the Grand Conseil of Berne the same system has been adopted. In fact, so far from working well, the old system led to most unsatisfactory results. Nine-tenths of the released convicts returned to their old courses and ere long purposely found their way again to prison, and this doubtless in a measure from the fact of their being so well known to the inhabitants who had seen them daily at their work, and hence the increased difficulty of their obtaining honest employment at the end of their servitude. Further, a great injustice arising out of the old system was the injurious competition caused to the honest day labourers, masons, road-makers, and others, by convict labour being thus thrown on the labour market. In many instances the farmers or contractors for buildings found it a great advantage to employ the latter. The ordinary wages of a journeyman may be reckoned at 1 franc 80 centimes, without food, whilst the convict was let out at 1 franc a-day at most, and brought his prison fare with him. Of course I am speaking here only of the grossest and roughest manual labour.

* A ridiculous incident is said to have occurred at Berne last year. A gang of convicts with two gendarmes had spent some time in a wine-shop outside the town, and the carousal ended in the convicts conveying their guards back to prison in a state of complete intoxication.

The model convict prisons of Switzerland are at Lenzburg, in the Canton of Argovie, and at St. Jacob, in the Canton of St. Gall. The latter is becoming too small for practical purposes, chiefly on account of the increase of prisoners consequent on the abandonment of corporal punishment. The Canton of St. Gall bordering on the Bavarian and Wurtemberg frontiers, the natives of those countries, or of neighbouring Cantons, who had been found guilty of minor offences, were summarily flogged and sent back whence they came, instead of being, as now, condemned to imprisonment.

I subjoin a Table of the number of capital crimes and executions which took place in the Cantons of Berne, Thurgau, Valais, Zurich, Neufchâtel, and Fribourg, during the period 1830 to 1865. I have selected these Cantons as best exemplifying the various systems of dealing with serious crimes obtaining in this country. The sum total of the population of these six Cantons amounts in round numbers to 1,100,000, or somewhat less than one-half of the entire population of Switzerland.

I add another Table, unfortunately very incomplete, containing such data as I have been able to gather respecting the other Cantons.

In summing up this Report in a few general remarks, it may be said that capital punishment is very seldom carried out in the majority of Cantons, although public opinion has not yet gone the length of pronouncing itself in favour of its complete suppression. It must be borne in mind that the radical change on this point in the Cantons of Fribourg and Neufchâtel dates back to an epoch of political convulsion, and it may safely be said to have been undertaken hastily. The warning example of these Cantons has not been lost on thinking men, and however great the tendency of the age to abolish the penalty of death by the hands of the executioner, some time must yet elapse before it is erased from the criminal codes of Switzerland. Without such fatal results staring them in the face, several of the Cantons, such as those of Zurich, Ticino, Vaud, and even Berne, might perhaps have followed the example of Neufchâtel and Fribourg.

At the same time a more "humane spirit" pervades modern Swiss criminal legislation, and in the same degree as executions have become more rare so are they, too, carried out in a more civilized manner. In several of the more important Cantons the guillotine has replaced the mediæval system of decapitation by the sword, and the sentence is in future to be executed within the precincts of the prison in the presence of a certain number of witnesses delegated by Government. The headsman of Berne has henceforward ceased to live except in tradition, and the mournful and ghastly details of a public execution carried out with all the barbarous display of the middle ages are happily now things of the past even in this, in many respects, the most conservative of the Cantons.

Whatever our individual opinions respecting this weighty question of capital punishment, we may all of us unite in rejoicing at such an improvement upon the blood-stained customs of old.

Name of Canton.	Date of Code.	Punishment awarded for Capital Crimes.	Number of Capital Crimes committed from 1830 to 1865.	How dealt with.	Population according to Census of Dec. 10. 1863.	Religion.
Zürich ...	Code of 1835, with Trial by Jury.	Death	No data. Sentence of death passed for 9 crimes committed by 11 persons.	6 executions; 5 pardons by Grand Conseil.	266,265	11,256 Catholics. 253,793 Protestants. 1,216 other confessions.
Berne ...	Old Helvetic Code (now being revised). Trial by Jury.	Death	159 capital crimes. 31 sentences to death.	23 executions; 7 pardons by Grand Conseil; 1 suicide.	467,141	58,319 Catholics. 405,727 Protestants. 3,095 other confessions.
Fribourg ...	Code of 1849. Trial by Jury.	Hard labour for life. (Capital punishment abolished in 1848.)	26 from 1830 to 1848; 47 from 1848 to 1864.	12 capital sentences passed from 1830–48; 3 executions (in 1832).	105,523	89,970 Catholics. 15,523 Protestants. 31 other confessions.
Thurgau ...	Code of 1841. Trial by Jury.	Death	9 capital sentences ...	7 executions; 2 pardons by Grand Conseil.	90,080	22,019 Catholics. 67,735 Protestants. 326 other confessions.
Valais ...	Code of 1858. Trial by Jury.	Death	18 capital crimes ...	3 capital sentences: 2 executions.	90,792	90,088 Catholics. 693 Protestants. 11 other confessions.
Neufchâtel...	Code of 1857. Trial by Jury.	Hard labour for life. (Capital punishment abolished in 1848.)	No data	3 sentences to hard labour for life; 3 to 15, 20, and 30 years, since 1848.	87,369	9,234 Catholics. 77,095 Protestants. 1,040 other confessions.

Name of Canton.	State of Law.	Number of Persons on whom Sentence of Death was passed, and since when.	Number of Executions.	Population according to Census of December 10, 1860.
Lucerne	Code of 1860; capital punishment	None since 1846	None since 1846	130,504
Uri	Lex Carolina; capital punishment	No data given in answers to circular	No data given in answers to circular	14,741
Schwyz	Lex Carolina; capital punishment	2 since 1848	Pardon for special reasons in 2 cases since 1848	45,039
Unterwalden ob dem Walde	Lex Carolina; capital punishment	No data given in answers to circular	No data given in answers to circular	13,376

Vaud	Code of 1843; trial by jury; capital punishment	No data given in answers to circular	No data given in answers to circular	213,157
Geneva	French Code Pénal of 1810; trial by jury; capital punishment (two degrees of extenuating circumstances, "atténuantes" and "très atténuantes")	5 since 1847	3 since 1847	82,876

Nassau.

Report by Corbett, Her Majesty's Secretary of Legation, on the Mining, Minerals, and Smelting Establishments of Nassau.

Darmstadt, March 1865.

IN a former Report on this subject (January 15, 1863) some account, drawn from official sources, was given of the mineral wealth and industry of the Duchy of Nassau, up to the year 1860. In this present Report it will be my endeavour to give in some detail a general view of the state of this industry, by a comparison of the years 1861, 1862, and 1863, the last for which Returns have been made up.

Table No. 1 contains a Return for the year 1861 of the number of workmen employed in mining operations, the quantity of mineral extracted, its value, and the quantity of ore smelted in the country and exported, as compared with the preceding year (1860). Table No. 2 contains a comparative Return for the same years of the value of the whole production of the mines and smelting furnaces, &c., and number of workmen employed, by which it appears that the decrease in the whole value for the year 1861, as compared with 1860, amounted to 175,556 florins, and, comparing it with the year 1857, to the notable sum of 2,791,506 florins. This unfavourable result is to be attributed in a great measure to the depressed state of the manganese mining business, and also in no small degree to the generally unfavourable condition of the iron trade, occasioned in the first instance by the commercial crisis of 1857 in America. It was increased by the war in Italy, and

again in a still greater degree by the civil war which broke out in the United States in 1861.

The total value of minerals extracted in 1861 exceeded that of 1860 by 107,729 florins; while the decrease in the total value of the metal manufactured in 1861 amounted to the high figure of 283,285 florins. The number of workmen employed in 1861, as compared with the preceding year, was less by 400, or about 5 per cent., and, as compared with the year 1857, the most prosperous period, shows a decrease of 3,100, or 27 per cent. The distress of the working classes, however, was obviated by the employment afforded by the recent construction of the Lahn-Rhine Railway.

The following special results as regards each branch of the industry are deduced from a detailed examination of the official returns, comparing the years 1861 and 1860 :—

Silver and Lead.—The quantity of silver produced in 1861, as compared with 1860, shows an increase of 2,212 marks. Of lead there is a decrease of 2,997 centners, and of litharge ("glätte") an increase of 4,069 centners. The value of silver and lead produced shows an aggregate increase of 35,929 florins.

Zinc.—The whole of this mineral produced in the Duchy is still, as heretofore, exported and smelted abroad. The produce of the mines in 1861, as compared with the preceding year, shows a diminution of 25,434 centners, and a still greater decrease in value, viz., 31,475 florins. As compared with 1856, the decrease is 72,000 centners in quantity and 98,500 florins in value. The price has fallen from 1 florin 8 kreuzers to 42 kreuzers the centner, a decrease of more than one-third, at which price it can scarcely be sold with profit.

Copper.—By comparison with the year 1860, the quantity of refined copper manufactured shows a decrease of 190 centners, and in value a falling off of 12,700 florins. In the last ten years the production has fallen off 36 per cent. It is anticipated, however, that, by the use of improved processes, a corresponding increase will be shortly attained.

Nickel.—An increase of 40,800 florins is to be observed in the value of this metal produced, as compared with the years 1860. This increase is to be attributed principally to the smelting of old stores of this mineral which remained on hand. The quantity of mineral extracted in 1861 shows an increase of 2,316 centners in quantity and 5,600 florins in value over the year preceding. The increase of production occurred principally in the mines of Hilfe-Gottes, near Nanzenbach.

Heavy Spar ("Schwerspath").—Although the development of the production of these mines is capable of very considerable extension, a kind of fatality appears to attend all attempts to increase their produce. Several undertakings—commenced, however, on erroneous principles—have failed. The production in 1861, as compared with that of 1860, shows an increase in quantity of 10,426 centners, and in value of 2,264 florins, a difference of small importance.

Iron and Iron Ore.—The general state of the iron trade, as observed above, was very unfavourable in the year 1861. In all branches of the business more or less falling off appears in quantity, and still more in value. Compared with the year 1860, we have the following results :—

	Decrease Quantity.	Decrease Value.
	Centners.	Florins.
Wrought iron	30,629	177,109
Cast iron	2,419	41,487
Blast furnaces (together)	33,048	218,596
Bar iron	7,105	Not specified.
Small iron ("Kleineisen")	1,393	
Sheet iron ("Blech")	3,283	
Rolling and forging establishments (together) ..	11,781	128,708

The whole decrease in value reached the large sum of 347,304 florins. As compared with the most productive year (1856), the following decrease appears, viz. :

	Florins.
Blast furnaces, &c.	921,819
Rolling and forging establishments	328,204
	1,250,000 (in round numbers).

Or about 40 per cent.

In addition to the loss thus sustained by the proprietors of forges and furnaces, the loss to the owners of forests is very great, the quantity of wood used to make charcoal having decreased by 900 klafters,* or 20 per cent. The furnaces in which coal-coke is used have also suffered great loss since the introduction of this fuel in 1852. In very few establishments have satisfactory results been obtained. The conditions of transport of this fuel before the construction of the railway from Deuz to Giessen were very unfavourable, on account of the high cost and delay incurred, by which its quality was greatly deteriorated. Attempts to make use of common coal in smelting operations proved a failure; probably on account of the inferior quality of this fuel employed. Hopes are founded, upon the present improved facilities and economy of transport, and on the changes introduced in the construction of the furnaces, by which less fuel is consumed, that this branch of industry will recover much of its former prosperity.

The quantity of coke employed in furnaces in 1861 was greater than in 1860 by 145,700 centners, and was only 60,000 centners less than the consumption of 1857.

The number of stove manufactories has decreased by three; there are now ten in all. The number of puddling furnaces shows also a decrease of three.

Although the manufacture of iron has greatly decreased within the limits of the Duchy, the exportation of iron ore in increased quantity to the coal districts of the River Ruhr, and in rather less quantity to the districts about Saarbrück, has been highly favourable to the mining interest. The produce of the mines in 1861, as compared with the preceding year, show an increase of 1,915,670 centners, or about 75 per cent. The increase in value, according to the average price, may be reckoned at 280,900 florins. The year 1861 is still, however, inferior to the year 1857: 1,525,100 centners as regards quantity, and 727,925 florins, in the value of iron ore produced. The average price of ore has decreased from 13 kreutzers a centner in 1857 to 9 kreutzers a centner in 1861, or 30 per cent. This fall in price is attributed to the more economical mode of working mines now in use, and an alteration favourable to them introduced in the mode of taxing iron mines. The number of workmen shows an increase of nearly 700, or between 20 and 25 per cent. on the whole number employed, but not quite in proportion to the increase of production. It would thus appear, as is indeed the fact, that only the most productive mines were worked.

Manganese ("Braunstein").—In my former Report it was observed that the quantity of this mineral produced had been decreasing up to the year 1860; and this decrease appears still greater in the year 1861, when 99,500 centners less were produced than in the previous year. The falling off in its value amounted to 63,061 florins. As compared with the year 1857, there appears a falling off of 543,100 centners in quantity and 1,055,300 florins in value. The average price in 1857 was 1 florin $44\frac{1}{2}$ kreutzers a centner; in 1860 it was $45\frac{2}{5}$ kreutzers a centner; and in 1861, $51\frac{3}{10}$ kreutzers a centner. The number of workmen employed in manganese mines as compared with the previous year had in 1861 diminished by 361, or more than half. As compared with 1857, the falling off is stated to be 1,400. Most of these men thrown out of work found employment in the iron mines and on the railways. Latterly there has been a greater demand for this mineral, and it is expected that its cost will be greatly reduced in future by the use of mines where iron ore is found in conjunction with manganese, and which have hitherto been neglected, except in as far as they could be profitably worked for the sake of the iron ore they contained. This ore is now in great request in the coal districts of the Ruhr and Saar, and is also sent to England.

Anthracite ("Braunkohlen"), *Potters' Clay* ("Thonerde"), *Fullers' Earth* ("Walkererde").—There is an increase in the quantity of these substances produced in the year 1861, compared with 1860, as follows:—

Anthracite	67,923 centners.
Potters' clay	43,257 „
Fullers' earth	3,416 „

The increase in value was—

Anthracite	721 florins.
Potters' clay	3,237 „
Fullers' earth	1,389 „

Of the two latter the price has not varied. The price of anthracite has slightly fallen.

Slate.—The slate trade is in a flourishing condition generally, in spite of some swindling transactions connected with it, which injured some well-established firms.

* 1 klafter = 1 fathom.

In 1861, compared with 1860, 3,790 reis* more slate were produced. The increase in value was 18,580 florins. The new mode of levying the taxes on these mines makes the increase in value appear less than it really is.

The opening of the Lahn Railway has reduced the price of slate at the mines of Weilburg very considerably; and although the quantity of slate produced was greater by 51 reis, the value was less by 9,454 florins. As compared with 1858, the most prosperous year, there appears in 1861 an increase of 2,259 reis in quantity, and 28,879 florins in value.

Table No. 3 contains a Return for 1862 similar to that for 1861, showing the number of workmen employed in mines, the quantity and price of minerals extracted.

Table No. 4 shows the aggregate number of workmen employed in mines and forges, and the value of ore and metal produced, as compared with the year 1861.

In 1862 there appears to be an improvement in all branches of mining and smelting industry, both as regards the quantity produced and its value, with the exception of anthracite. The whole value of the produce of the mines amounted to 220,990 florins, an increase of 15 per cent. on the previous year. The increase in value of metal smelted was 256,500 florins, or 10 per cent.. Together, the increase in value was about 477,400 florins, or nearly 12 per cent. The number of workmen employed shows an increase of 1,533, or about 18 per cent. Compared, however, with the year 1857, the most prosperous period, there appears to be for the year 1862 a decrease in the whole value of production of about 2,315,000 florins, or 34 per cent., and in the number of workmen of 1,600, or 14 per cent.

Silver and Lead (found in conjunction).—As compared with the preceding year, rather less silver was produced; of lead there is an increase of 5,100 centners; of litharge ("glätte") 4,800 centners less was produced. The value of the whole was 2,100 florins less. The quantity of ore produced was less by 3,700 centners than in the year preceding, but commanded a somewhat higher price. A good deal of the ore extracted in previous years was smelted in 1862.

As compared with 1861, 23,575 centners more zinc-ore were produced. Although the price fell to 39 kreutzers the centner, or 3 kreutzers less than in the year previous, the whole increase in value amounted to 14,048 florins.

Copper.—170 centners less copper were manufactured in 1862, and the decrease in value was 5,800 florins. The quantity of ore extracted shows a still greater decrease, viz., in quantity 1,453 centners, and in value 17,622 florins.

Nickel.—There appears in 1862, as compared with 1861, an increase of 385 centners, and in value of 13,800 florins. Of nickel-ore (as before only in the mines of Hilfe-Gottes) an increase of 7,515 centners in quantity, and 17,623 florins in value.

Heavy Spar ("Schwerspath").—The production of this mineral is reduced to almost nothing, viz., 755 centners less than in the year previous. This result was, however, anticipated.

Iron and Iron Ore.—The increased demand gave rise to the expectation that the price of iron and iron-ore would rise, and a considerable impulse was thus given to smelting establishments, and in a less degree to forging and rolling works. These anticipations were not, however, fulfilled, and large losses were incurred.

As compared with the previous year, the different branches of the iron industry of Nassau show, in 1862, with the exception of the article small iron ("Kleineisen") of which 300 centners less were manufactured, the following increase:—

	Quantity.		Value.	
	Centners.		Florins.	
Wrought iron	56,800		133,100	
Cast iron	20,400		117,000	
Furnaces (together)	..	77,200	..	250,100
Bar iron	2,900		No return.	
Sheet iron	1,400			
Sheet and bar (together)	..	4,300	..	500
Total increase (all branches)		81,500		250,600

The quantity of iron-ore extracted was greater by 864,500 centners, and in value by 166,800 florins. As compared with the year 1857 the falling off is

* 1 Reis = 3 fr. mètres.

660,700 centners in quantity, and 561,200 florins in value. The exportation reached 3,871,300 centners. 1,105,100 centners were smelted in the Duchy.

The completion of the new Lahn railway has had great effect in increasing the total production of ore, by opening up communication with the rich iron district of the River Lahn. The introduction of railways not only decreases very considerably the cost of transport, but also has put an end to the necessity which formerly existed to keep three years' consumption of ore always beforehand, on account of the uncertainty of the navigation of the Lahn. One year's production was kept at the mines on hand; one year was required to bring it down the Lahn; a third year was lost in collecting the ore at the depôts. In addition to these delays, it happened occasionally that the navigation was stopped entirely from scarcity of water, which actually occurred in three succeeding years, 1857, 1858, and 1859. A still further development of railway communication is loudly demanded.

Manganese.—The production of this mineral shows an increase of 66,700 centners, but on account of the decrease in its price to $44\frac{3}{5}$ kreutzers a centner on an average, the increase in value amounted to only 35,600 florins.

Anthracite.—In 1862, 15,400 centners or 15 per cent. less were extracted, and the decrease in value amounted to 38,775 florins, or 23 per cent.

This decrease was caused principally by the facilities afforded by newly-established railways, which now bring (common) coal to the districts where anthracite coal was formerly consumed, and for which the use of the former has been substituted.

Potters' Clay; Fullers' Earth.—The former shows an increase, and the latter a decrease in the quantity produced in 1862. The whole of the fullers' earth is exported abroad.

Slates.—The improvement in this branch of trade has been sustained. The increase, as compared with 1861, was in quantity, 6,616 reis (20 per cent.), in value, 14,500 florins ($9\frac{2}{10}$ per cent.) The price of slates of best quality was well sustained, but the inferior sorts fell in price on account of the greater economy in their extraction.

Table No. 5 contains a return for the year 1863, similar in character to Nos. 1 and 3 above mentioned.

Table No. 6 shows the number of workmen employed in 1863, and the value of the production of the mines and metal works as compared with 1862.

In general the results show a marked improvement in all branches of mining industry. The whole value of the production of mines and furnaces shows an increase of somewhat more than 500,000 florins, viz., in value of production of mines, an increase of 143,700 florins, and of furnaces, &c., an increase of 358,600 florins.

In detail this increase as regards mines is thus distributed:—

	Increase in Quantity.	Increase in Value.
	Centners.	Florins.
Lead and silver ore	16,600	12,500
Zinc ore	12,300	16,900
Copper ore	3,500	23,600
Nickel ore	5,400	—
Heavy spar	5,300	300
Iron ore	483,200	51,600
Manganese	7,900	9,400
Anthracite	45,700	—
Potters' clay	71,000	3,500
Fullers' earth	..	300
Slates	3,400 reis.	30,800

The quantity of lead and silver ore extracted in 1863 was greater than in the previous year; but, on account of a change introduced in the manner of taxing these mines, the return of the whole value has not attained the amount which might have been expected.

As compared with 1856, the year of the largest production of zinc ore, there is in 1863 a decrease of 33 per cent. in value, and 58 per cent. in quantity, although the price was quoted somewhat higher.

Two thousand nine hundred centners more copper ore were extracted in the mining district of Dillenburg of extraordinarily rich quality (entirely free from lead and zinc). Other mines have not, however, been worked at a profit.

Of iron ore, the quantity extracted is only inferior to that of 1857 by about 177,000 centners, and the whole value by 51,000 florins. The greater facilities of

transport afforded by the Nassau Railway have contributed largely to the prosperity of this most important branch of mining.

The quantity of anthracite extracted in 1863 amounts to one-third of that of 1857, the most prosperous year; whereas the whole value is less by 87 per cent.

The condition of the slate trade still continues to improve.

In the produce of smelting establishments and metal works in 1863 there was an increase both in quantity and value. This increase is thus stated:—

Lead and Silver Works.

	Quantity.	Value.
		Florins.
Silver	2,266 marks	54,900
Lead	2,400 centners	24,900
Litharge	700 „	64,800
Total increase	..	144,600

Copper Works.—Increase in quantity 348 centners; in value 22,000 florins.

Nickel Works.—Increase in quantity 872 centners; in value 20,400 florins.

Iron Works of all kinds.

	Increase in Quantity.	Increase in Value.
	Centners.	Florins.
Wrought iron	54,532	80,100
Cast iron	13,025	79,400
Together, increase	67,557	159,500

Forges and Rolling Works.

	Increase in Quantity.	Increase in Value.
	Centners.	Florins.
Small iron ("Kleineisen")	596	11,900
Iron plates (sheet iron)	3,030	
Total increase	..	171,400

It is only in the article bar iron that a decrease of production is to be observed, amounting to 443 centners.

The anticipations of a rise in the price of iron, which occasioned a great increase of production, have not been entirely realised, although the demand is more active, and the price of wrought iron has risen 1 florin 10 kreutzers the 1,000 lbs.

As heretofore, all lead, silver, copper, and nickel ores are smelted in the Duchy. The zinc ore is exported, as well as the manganese and fullers' earth.

The exportation of iron ore amounted to 4,461,000 centners, or about three-fourths of the whole production. The remaining fourth was smelted in the Duchy.

Of clay used for fire-proof crockery and finest pottery, about one-half was exported.

About one-half the slates produced were also exported.

The whole number of workmen employed was less by 553 than in the previous year, or about 6 per cent.

The following Table shows the quantity of wood and other combustibles consumed in connection with mines and smelting works during the three years 1861, 1862, and 1863:—

Years.	Timber.	Charcoal.	Total.	Coke.	Coal.	Anthracite.
	Klafter.*	Klafter.*	Klafter.*	Centners.	Centners.	Centners.
1861	3,475	40,291	43,766	225,732	111,481	12,030
1862	3,304	40,194	43,498	199,103	134,548	11,500
1863	3,537	45,161	48,698	309,160	154,432	15,500

* 1 klafter = 1 fathom.

(Signed) EDWIN CORBETT.

Belgium.

Report by Mr. Barron, Her Majesty's Secretary of Legation, on the Arms Trade of Belgium.

Mr. Barron to Lord Howard de Walden.

My Lord, *Brussels, April* 9, 1865.

MY present annual Report will be devoted to the *arms trade of Belgium*, in which term I include the manufacture rather than the commerce of arms. This industry stands perhaps the first of all, not in the aggregate value but in the celebrity of its produce. This produce has obtained a footing upon every market of the world. Wherever fire-arms are used the Liége proof-mark will be found in circulation. My next study will be the subject of flax cultivation and dressing, according to the notice which I received in March. As I was then considerably advanced with this present Report, having been occupied during the greater part of a year in collecting materials for it, I have thought it advisable not to postpone sending it any longer. I cannot refrain from stating the obligations which I am under to Captain Nicaise of the Artillery, attached to the Ministry of War, and to M. A. Polain, Director of the Liége proof-house, for assistance and information.

2. The manufacture of fire-arms in the Principality of Liége dates from the middle of the fourteenth century. Cannon, or as they were then termed, *bombards, were the most ancient fire-arms*. They were made of iron bars, hooped together with iron rings. The French used some at the siege of Puy-Guillaume in 1328, the English at Crécy in 1346, the first authentic instance of their use in the field. The Liégois used bombards at the siege of Hamalle in 1346, the first appearance of fire-arms in Belgian history. Besides bombards, a portable kind of ordnance named hand-cannon came into use at an early period. They were so small and light (from 25 to 50 lbs.) that one of them was carried by two men. The 400 cannon (or most of them) with which an English army besieged St. Malo in 1378, as mentioned by Froissart, must have been of this kind, as also the 300 guns used by the Gantois against the Brugeois in 1380, and by the Liégeois at Othée in 1408.

3. There is no doubt but that *England has derived much knowledge of artillery from this country*. Dr. Henry even conjectures that hand-cannon were first introduced into England by the Flemings who accompanied Edward IV on his return to England in 1471. Both Henry VII and Henry VIII employed a number of Flemish gunners for the purpose of fostering the science of artillery. Among others, one Peter van Collen is mentioned in Stowe's Annals as employed by King Henry in 1543 for making mortars and shells, "to be stuffed with firework or wild-fire." Cannon were first cast about the middle of the fifteenth century, in England in 1521, when brass was used for the purpose. Iron guns were cast about 1547. Both kinds were then and down to the middle of last century cast hollow, the bore being formed by a core which was kept suspended in the centre of the mould.

4. Portable or hand fire-arms did not appear till the fifteenth century. The earliest were the *hand-cannon and hand-guns*, both with straight stocks and ignited by hand matches. Next came the *arquebuse and musquet, both on the matchlock principle* ("serpentin"), a contrivance suggested by the trigger of the cross-bow to convey with instantaneous action the burning match to the pan. The arquebuse is first mentioned by Philip de Comines in his account of the battle of Morat in 1476. The wheel-lock ("rouet") invented at Nuremberg or in Italy about 1517, soon supplanted the matchlock. It was a small machine for exciting sparks of fire by the friction of a furrowed wheel of steel against a piece of sulphuret of iron, and was moved by a spring like that of a match. The wheel-lock arquebuse was generally given to the cavalry, while infantry retained the matchlock on account of its greater economy. The snaphaunce again was an improvement on the wheel-lock, and was a near approach to the modern flint-lock.

5. *The flint-lock, the capital improvement in fire-arms*, originated in France about 1635, and has descended with little alteration to our own times. The simplicity of this new agent, the cock and flint, first allowed the use of fire-arms to become

general. To this invention the Liége armourers' trade owes its prosperity and even its existence as a separate denomination. The first exporters of arms from Liége were chiefly nail merchants, a class who possessed already commercial relations from time immemorial with distant countries. The first barrel-makers were smiths and the first stock-makers were carpenters. Subsequently the latter ("faiseurs de bois d'arquebuse") seem to have become one of the thirty-two recognized guilds of the city, but gunsmiths ("garnisseurs de canons") remained a sub-denomination of the smiths ("bon métier des febves"), governed by special very stringent laws.

6. The first regulation of this trade now extant dates from the year 1672, when the Prince Bishop Maximilian Henry ordered that the municipality of Liége should provide a suitable place for the proof of fire-arms, where dealers should be obliged to bring all gun-barrels, whether imported or forged in the city, together with the powder and bullets necessary for their proof; the barrels were to be loaded by a sworn prover with a bullet of their calibre and a charge of powder equal to the weight of the ball, and then, if found good, stamped with the arms of the city. Garnishers, stockers, and dealers were forbidden to work, sell, or export any barrel not thus stamped. All infractions of this ordinance were to be visited with a fine of a gold florin; a forgery of the city mark with a fine of 100 florins. Two further Ordinances issued in 1700 regulate the conditions necessary for exercising the trade of a "maître garnisseur de canons," as well as the prices to be paid to them by the merchants ("marchands d'armes") for every description of barrel or part of an arm. The same stringent regulations prevailed in France and England from a still earlier date for the proof of gun-barrels. The earliest "banc d'épreuves," that of St. Etienne, dates back as far as the reign of Francis I. The London Armourers Company was authorized by a Royal Charter of 1637 to prove and stamp every description of portable gun-barrel. The Birmingham Proof-house was established in 1813.

7. *The Wars of the French Revolution* had, of course, a great effect upon the fortunes of Liége. The decisive battle of Jemmappes, on the 6th of May, 1792, opened all Belgium to the army of Dumouriez. The French entered Liége on the 28th of November; and being left in rags by their own Government, supported themselves by pillage. Four Commissioners, presided by Danton, were sent by the Convention to restore order, but far surpassed the soldiers in the extent of their depredations, which they amply atoned for by their revolutionary ardour. The Belgians generally showed great indifference to being made free and happy. Liége, however, was a marked exception, and imitated, on a small scale, the saturnalia of Paris. The Austrians, under the Prince Josias, of Saxe-Coburg, grand uncle of the present King, recovered all Belgium, for fifteen months, by the battle of Neerwinden (18th March, 1793), but again had to retreat before Jourdan and Pichegru after the battle of Fleurus (June 1794). For a year Belgium was again a prey to wholesale rapacity, disguised under the most fervid eloquence, till the country accepted as a relief its annexation to France, decreed by the French Convention on the 1st of October, 1795.

8. During the French domination the manufacture of arms was much hampered by the law. No arm or piece of an arm of the military calibre could be manufactured outside the Government factory without a special authority. Slave Trade guns were alone excepted. All others were prohibited from export if their calibre exceeded that of 22 to the pound. *In* 1810 *the Emperor issued a Decree on the proof of fire-arms*, which, with some modifications, is still in force here. By it all manufacturers, dealers, and gunsmiths were prohibited from selling any barrel without its having been previously marked, under a penalty of 300 francs for the first offence, and double that fine for the second, besides the confiscation of the barrel. Arms destined for commerce were declared seizable if they did not vary at least 2 millimètres from the military calibre, which was 0·0177 of a mètre. An exception was made in favour of Slave Trade guns, which, however, were not allowed to circulate in France, but were to be deposited in the seaports.

9. In 1814 the system of monopoly ceased with the entrance of the Allies. The arms trade became free, and divided itself into *three great categories, those of military arms*, of *commercial arms*, and of *high-class fowling-pieces* ("armes de luxe"). The Dutch Government neglected nothing calculated to develop this trade. The Liége proof-house was maintained for the new Kingdom. A new tariff of fees was drawn up in 1818, reducing considerably the former fees for proving barrels. During the present reign some further reforms have been introduced in the organization of the proof-house by the Royal Arrêtés of 1836, 1846, and 1849. These dispositions were

fortified and completed by the *Arrêté of the 16th June*, 1853, which forms the chief authority in this matter, and by further Arrêtés of the 16th February, 1863, and 20th June, 1864.

10. All fire-arms made or repaired in the Kingdom must now be proved at the *Liége "banc d'épreuves."* The same rule applies to those imported from abroad, unless they have been proved and stamped in the maker's country. The proof-house is governed by an administrative Commission, composed of the bourgmestre or his delegate as president, of six syndics elected by and among the "principal" gun-makers of the arrondissement, viz., those who are assessed in the rolls of the "patente" among the nine first classes of taxpayers (there being seventeen classes in all). The syndics are elected for three years, two of them retiring on the 1st of January of every year. Their special duty is to watch over the interests of the trade. They have access to the proof-house at all times; they have an unlimited control over the details and accounts of the establishment; and they have the power of enforcing every possible improvement in the proof of barrels.

11. Under this Commission is a *Director appointed by the Minister of Foreign Affairs* (commerce being one of the Departments in this Ministry), from a list of three candidates presented by the principal gun-makers. He has to deposit a caution-money of 6,000 francs, and receives a salary of 4,000 francs, which is to include the interest of his caution-money. His duties are to act as Secretary to the Administrative Commission, to enforce regularity in the service, and the strict execution of the rules; and to have the custody of the puncheons. All the other officials are appointed annually, viz., the Comptrollers by the Governor of the province on the recommendation of the Commission, the revisers, the book-keeper, the foreman, the caretaker, gauger, loader, and prover, by the Commission. The Director may appoint any clerks or workmen under the approbation of the Commission.

12. *The "banc d'épreuves"* is composed of a strong stone bench, with sixty grooves for the barrels, of a heavy fixed beam at the rear, called "pièce de recul," and of a large moveable beam, which is suspended above the bench, and is let down upon it by pulleys to keep the barrels in their places. Sixty barrels are fired at once by a train of gunpowder connected with their touch-holes, and ignited by means of a large gun-lock and trigger pulled by a cord from outside. There are two of these benches, and one for pistols, working uninterruptedly every day at the Liége proof-house. The number of barrels approved in 1864 was 859,498; to these are to be added about 3 per cent. more which are rejected, and the numerous barrels which are proved two or three times, but are only recorded once. More than 1,000,000 shots are thus fired.

13. All barrels brought to the proof-house are first visited by a comptroller in order to verify that their state of fabrication is sufficiently advanced to enable them to be completed without impairing their solidity. They are then handed to the gauger, and are stamped each with the figure denoting its calibre. They then pass on to the loader in order to receive the charges of powder and ball proportioned to their calibre. All arms are tested with a charge of powder equal to at least two-thirds of the weight of the bullet; but military barrels have to bear a charge of powder equal to the full weight of their bullet, viz., $27\frac{1}{2}$ grammes (2 ounces), for the regulation musket of 0·688 inch bore. The bullets used fit very loosely, a windage of six-tenths of a millimètre being allowed by law. After proof, each barrel goes back to a comptroller, who examines it closely, and affixes to it his private mark if it shows no fault. It then receives from the foreman the mark of provisional acceptation, consisting of the interlaced letters EL. The barrel is then carried away to be mounted and finished; after which it must be brought back to the proof-house in order to be again scrutinized, and to receive the mark of definitive acceptation. At this stage the comptroller, if he suspects that the barrel has been weakened in any way, may refuse to mark it without giving any reason, and may require another proof. Percussion guns, breech-loaders, and all others which, after proof, have undergone any alteration whatever in the fire, are by law proved a second time, and then receive another provisional mark, called the "Péron de Liége," a kind of column. A double-barrelled gun thus undergoes two proofs; the first on each barrel separately, the second when they are welded together. A breech-loader must be proved again when fitted with its joint. The powder used is good sporting gunpowder, and must be approved by the Commission. Imperfect barrels are returned to their makers to be repaired; those which burst and are considered irreparable are sawn asunder.

14. In point of stringency, the *French system of proof* is below that of Liége. The English proof is as strong as that of Liége, for muskets even stronger; but the penalties on fraud and forgery are lighter. France is still governed by the Decree of 1810, which there has even become relaxed in practice, while in Belgium the same Decree has been materially strengthened. Thus, in France, the barrels of certain Paris makers and pocket-pistol barrels in general are dispensed from all Government proof. At Liége every barrel of a pistol and every chamber of a revolver must be proved separately. Single-barrelled ramrod guns are proved once. Double-barrelled guns have to undergo two, and if breech-loaders three, proofs. At St. Etienne there is only one proof for gun-barrels, which evidently offers no guarantee of strength if the barrel is subsequently altered.

15. Another great guarantee for the strength of Liége workmanship lies in the *ancient trade customs of the place.* The utmost division of labour prevails in this manufacture. Each class of mechanics has its own speciality. The master alone possesses the collective knowledge necessary for making a gun. But the first thing which every workman is obliged to acquire is a knowledge of barrels, and this for the following reasons. A double-barrelled breech-loader is subjected to three proofs, the first on each barrel separately, the second on the barrels when welded together, the third when percussioned and jointed. If the barrel bursts on the first proof the barrel-maker must replace it, and loses, therefore, the fruit of his labour. If a barrel bursts on the second proof the garnisher is also made responsible jointly with the barrel-maker. If the barrel bursts on the third proof all those who have assisted in the work, viz., the barrel-maker, the garnisher, and the "systémeur" (percussioner), must suffer, and all lose the fruit of their labour, unless the defect can be traced to the fault of any one of the three in particular. The whole price of the job is stopped from their account in the manufacturers' books. Thus every workman is made responsible for the quality of the barrel, and he is therefore in self-defence obliged to scrutinize it thoroughly before beginning to work on it. Such a severe system would be vainly attempted elsewhere. It is sometimes even unjust, but affords the highest guarantee of the soundness of a barrel. It is submitted to by all as an immemorial usage. This docility of the working class, combined with an abundant supply of labour, is one of the main causes of the astounding development of the Liége arms trade.

16. It is true that *for a time great laxity crept into the administration of the proof-house,* to such a degree that the Liége mark came into disrepute even among the negroes, for whose benefit the cheap muskets called "bords" are manufactured.* A former director was obliged to abscond in 1852 on being detected of a long course of malversation by which he contrived to appropriate 50,000 francs of the public funds. These frauds were at last discovered by the banker of the Commission, and led to the appointment of a Commission of Inquiry and then to the revised Code of 1853. An occasional charge against the trade is that after proof the bore of a gun is fraudulently enlarged (to remove some inner flaw, &c.), and the barrel thus weakened. This fraud is now impossible, and could not have been practised if the law had been honestly executed, as the stamp of calibre has always existed since 1672.

17. Through the *vigilance of the present Director, M. Polain,* a novel fraud was discovered in 1862. Rough gun-barrels were being exported under the name of gas-pipes on a large scale without any proof. Some thousands found their way to England, and from thence probably to America. A large consignment was suddenly stopped at Antwerp, and became the subject of a long correspondence. Great influence was used to allow them to pass, on the argument that, being unstamped, they could not compromise the reputation of Liége. The Director, however, advised their seizure as being manifestly contraband, and ultimately succeeded in preventing them from being exported. Another incident resulting from the American war was the purchase in Germany by Belgian speculators of 100,000 Austrian refuse muskets at an average price of 5½ francs. These were rifled, repaired, and percussioned at Liége, exported without any proof, having already the Austrian mark, and sold in America for from 27 to 30 francs. This abuse led to the Royal Arrêté of 20th June, 1864, ordering that arms repaired or percussioned in this country should be submitted to proof. It may be doubted whether this

* These are distinguished from military muskets ("armes de guerre") by having the definitive mark stamped four or five inches up the barrel, instead of at the breech as on the regular musket. They are proved like fowling-pieces, with a two-third charge.

Decree is strictly enforced, as infractions of it are difficult to detect. Cases of arms are never, without special cause, opened or searched by the Customs officers on export.

18. *The present system of proving rifled muskets,* the only kind now used, is somewhat illusory. They are proved before being rifled, and then with spherical bullets. It will certainly be admitted that the operation of cutting three or four grooves through the whole length of a barrel must somewhat impair its strength, and that the strain exercised by a common round bullet fitting loosely and wrapped in paper is very different from that of a long cylinder double the weight of the former, and pressing hermetically, not on a single point, but on half an inch of the barrel. Muskets ought to be proved after being rifled, and then with a triple charge of powder, and with the elongated bullet which they are intended to carry. Many Governments, including our own, when contracting for muskets at Liége, require a second proof after rifling; others, as for instance the Russians, do not. Most Governments enforce a strict inspection of their arms and of every separate piece of them by comptrollers of their own sent for that purpose to Liége.

MALL

Section II.—*State of Manufacture and Exports.*

19. Of the numerous manufactures flourishing in Belgium, *this one stands seventh in the number of hands which it occupies.* The census of 1856 sets down the number of persons engaged in it at 9,675. Other estimates bring the numbers directly or indirectly engaged in it up to 20,000, or even 30,000. This industry is confined solely to the arrondissement of Liége. It is this local concentration, together with the division of labour which prevails in this trade, and the pre-eminence which it has acquired in the markets of the world, that render it comparable only to the watch trade of Geneva. One feature of the arms trade, proving how much it developes the intelligence, is, that many of the improvements in it are due to working men. At the same time, being practised at home, it is not so demoralizing as others carried on in large factories. By another rare privilege, it is proof against political convulsions, thriving in war as well as in peace. Every successive innovation brings a rich harvest to Liége—such as, for instance, the percussion-lock, the breech-loader, and the rifled musket.

(No. 1.)—Statement of the Numbers of Barrels approved at the Liége Banc d'Epreuves during the following years.

Years.	Gun Barrels for			Pistol Barrels for		Military small arms.	Total.

1858 .. .	198,211	74,723	39,114	38,502	181,660	62,563	594,773
1859	168,553	58,160	34.275	35,016	180,042	113,250	589,296
1860 . ..	139,352	80,605	52,981	30,272	189,090	179,660	671,960
1861	126,500	69,383	26,863	23,708	189,452	248,746	684,652
1862 .. .	93,475	69,925	55,642	32 232	202,310	325,689	779,273
1863	145,461	83,394	23,058	15,112	273,922	256,888	797,835
1864	202,216	96,616	13.682	23 306	345,926	177,752	859,498

N.B.—The above figures do not include the arms rejected on proof, or those made in the Royal factory; but, on the other hand, they comprise many old guns proved again on being repaired or altered.

20. Forty years ago the average production of Belgium was only 132,292 barrels. It now amounts to six times that number, 859,498 *being the number of barrels approved in* 1864. This is a greater number than ever before passed through the proof-house in a single year. The great bulk of these barrels were newly manufactured; a small fraction only were old barrels, obliged to be proved on being repaired or

percussioned. Of the barrels proved, 3 per cent. on an average burst, and are not included in the above figure of 859,498; neither does it include the arms manufactured by the Government. The production of 1864 is large when compared with that of 1863; enormous if compared with that of the decennial period from 1841 to 1850. The greatest increase has been in single guns and pocket-pistols. Double guns and holster-pistols have somewhat increased. The production of muskets of both kinds, whether "bords" or military arms, has fallen in 1864 below that of any year since 1859.

(No. 2.)—Statement of the Values (in Francs) of the Arms exported from Belgium during the following Years.

Years.	Small fire-arms.	Side-arms and accoutrements.	Ordnance of		Total.
			Brass.	Iron.	
1850	4,932,900	25,973	250,740	52,510	5,253,123
1851	5,960,759	28,272	254,291	70,273	6,313,595
1852	5,459,328	59,267	1,657,962	24,528	7,201,085
1853	7,820,258	7,460	988,123	—	8,815,841
1854	9,571,388	18,718	109,575	112,568	9,812,249
1855	8,968,967	188,576	1,128,451	25,400	10,311,394
1856	10,222,340	1,477,490	2,100,915	57,565	13,858,315
1857	10,388,430	762,160	16,105	79,211	11,245,906
1858	9,924,060	26,080	7,520	227,090	10,194,750
1859	10,002,910	87,380	6,120	62,150	10,158,560
1860	11,891,960	211,472	—	2,740	12,106,172
1861	17,904,684	351,292	—	8,205	18,264,181
1862	22,982,457	473,838	—	1,271	23,457,566
1863	19,129,401	162,663	104,508	16,407	19,412,979
1864 (small and side-arms) ..	16,358,803				

N.B.—The above Table does not include powder, shot, or percussion caps.

21. *The statistical data concerning this trade are few*, and those few are somewhat conflicting. With reference to this Table, the first remark to be made is, that the values of these exports are generally understated, the only authority on which they are based being the merchants' declarations. On the other hand, it is also to be remarked that the exports of recent years must include large amounts of foreign arms imported into Belgium free of duty to be repaired or altered. Formerly these arms were imported *en franchise provisoire*, under the Law of 1846, and when exported were not included among Belgian produce. The old duty of 7·20 per cent. *ad valorem* was repealed by the Franco-Belgian Treaty, and a large importation of foreign arms has since taken place. These imports were in—

1861	1,903,870	1863	1,025,625
1862	1,602,995	1864	1,135,372

which of course became confounded with Belgian produce, and when exported could not be distinguished from it. This will partly account for the exceptionally large exports of 1862. The decrease of exports of 1864 is probably more apparent than real, considering that the manufacture of barrels has increased so largely. The records of exports are not so ample as might be wished, the value alone, and not the quantities, being stated. This will be partially remedied in future by recording the gross weight of exports, as in France.

(No. 3.)—Comparative Statement of the Small Fire-arms exported from Belgium, Great Britain, and France during the following years.

Value in £ Sterling.

		1857.	1858.	1859.	1860.	1861.	1862.	1863.	1864.
Belgium		415,536	396,960	400,116	475,676	716,184	919,296	765,176	654,352
Great Britain	Number ..	299,243	223,718	171,529	272,948	315,509	702,254	429,122	260,986
	Value £ ..	409,789	325,543	168,897	358,847	515,361	1,573,706	856,009	344,476

	Value £ .	123,464	121,880	243,824	240,948	760,648	596,796	522,532	280,024

N.B.—This Table includes guns and pistols, excepting in the English return for 1857, wherein pistols are not included. The numbers of fire-arms exported are recorded in England alone. The weights and values are recorded in France. In Belgium the values alone.

22. In attempting a comparison like the above, the want of exact and uniform data is seriously felt. *In Belgium there is no record whatever of the quantity of arms exported.* In England and France the quantities are recorded, but on such different principles as to baffle all attempts at comparison. The three statistics agree in showing a great and sudden increase of exports in 1861, caused no doubt by the American demand. The exports reached their climax in 1862, and have receded ever since. Belgium is certainly gaining upon her two rivals, having exported last year a greater value of arms than England and France united. Where they all go to cannot be ascertained. The official returns afford no index of their ultimate destination. The great bulk are cleared for France and England, but evidently only for transit or transshipment, Antwerp being deficient in trans-Atlantic steam communication. With the exception of France, Austria, and Prussia, most European as well as American Governments buy more or less of their muskets at Liége. The best customers have been the United States and the United Kingdom. Their demand has now entirely ceased. Large orders are now on hand for Russia and Italy.

23. The following distinct *trades are employed in the manufacture of a musket.* The barrel-maker, band-maker, percussioner ("systémeur"), ramrod-maker, lock-maker, trigger-guard-maker, bayonet-maker, locking-ring-maker ("embagleur"), screw-maker, stock-maker, setter-up, and nipple-maker. None of these use machinery properly so called. All but the first do their work at home by manual labour. The barrel-makers use small water-mills for the purposes of forging, grinding, and boring the barrels. This industry is carried on all over the arrondissement wherever water-power is available, by a thriving class of artisans called "usiniers." They generally buy their own iron and sell the barrels to the "fabricants d'armes," thus often amassing good fortunes. A few "fabricants" of the highest standing buy their iron and have it forged themselves. Barrels ought to be made of tough charcoal iron, the best of which is supplied by the furnaces of Chimay, Couvin, Piéton-sur-Meuse, Bouillon, and Annevoye. It is sold in the form of short flat slabs.

24. These slabs are hammered by water-power into long flat quadrangular slabs or "skelps" called "lames à canon," about three feet long, thicker and wider at one end. The *skelp-forger* ("*marteleur*") with two assistants can forge about 80 or 90 skelps in ten hours. The next operation, that of *welding the barrel*, is accomplished by hammering the skelp on a grooved anvil, thus turning up the edges over a mandril and welding them together in lengths of 2 inches at a time, each length being exposed to three or four welding operations with alternating high and low heats. A good workman will weld three barrels in ten hours' labour. The lump or nipple-seat is next welded on. The price of a rough barrel in this state is about 5 francs. It then undergoes a series of operations called "usinage" (chiefly boring, grinding, and straightening), which, as practised in the Royal Factory, will be described below. Boring as now practised is assisted by the pressure of the workman's body. It is so severe a labour as often to induce deformity. Grinding is attended with some danger from the occasional rupture of the mill-stones.

25. *When the barrel comes from the "usine"* it has to go to one man to be breeched, to another to be garnished, to a third to be percussioned, to a fourth to be drilled for the touch-hole, to a fifth to be rifled, to a sixth to be stocked, to a seventh to be polished and set up. The *stocker* and *setter-up* come to the counting-house with their wives and apprentices to fetch their pieces of work, thus losing a day on the journey and at the tavern. Women are constantly seen in the streets of Liége carrying bundles of gun-barrels on their heads. The guns come back to the manufacturer after six or seven months. The setter-up brings twenty or twenty-five at a time. Another loss of two or three days occurs in viewing these arms. Two or three guns will be rejected, and this loss will fall on the workman, who is probably in debt, having been so long without receiving any wages. The wages of several months' labour are paid to him at once, exposing him to temptation and robbery. It is not surprising if these two classes live in a state of chronic pauperism. They are generally ill lodged, ill provided with tools, stinted of air and space. It is common to see a stocker or a setter-up obliged to work and sleep in the same room, surrounded with a family and perhaps 100 guns.

26. The only hands employed on the gunmakers' premises are a few *lock-filers*, to assist the comptroller in viewing the guns when they come in from the stocker, and to put the locks into working order. This class of men are called "rhabilleurs"

or "platineurs de recette." The lock-filers are generally a superior class, each master having often a workshop in the country and a number of journeymen. It is a trade somewhat trying to the chest. In case of an excessive demand, overwork often induces consumption, from the pressure of the centre-bit on the chest. The *gun furniture* is all made likewise in little forges round the town. Of course in cases of pressure the gunmaker has to send repeatedly to get in all these pieces. A gu has to go in and out of the maker's premises about 200 times before it is finished, and to pass through 20 different hands. Such a system must be often productive of inconvenience and of heterogeneous styles of workmanship.

27. *Liége possesses five factories, properly so called, for the manufacture of arms*, viz., the Royal Cannon Foundry, the Royal Gun Factory, the Barrel Works of Val-Benoit, the Musket Factory of Messrs. Falisse and Trapman, the Revolver Factory of M. Francotte. Val-Benoit is the only mill in Belgium where barrels are rolled by machinery. It was first established by the Cockerill Company, but was closed in 1835. The great difficulty was to obtain a good coke iron for barrels, such as till lately Mr. Marshall, of Wednesbury, alone produced. This was at last achieved by the celebrated Iron Works of Seraing. Their barrel iron is described by some as superior even to charcoal iron. Thanks to this result, Val-Benoit was again opened, and is now organized so as to turn out about 400 barrels per day. They are made from slabs 10 or 12 inches long. These are first bent in their whole length by means of grooved bending-rolls until they assume the form of short rough tubes, called there "carottes," their opposite edges being brought to meet without overlapping. They are then laid on the hearth of a reverberating furnace, brought to a full welding heat, and then repeatedly passed between grooved rollers of gradually decreasing grooves. The barrels of Val-Benoit are not considered to be quite equal to hand-forged barrels; but in seasons of pressure they are employed promiscuously with these, even for first-class muskets. One hundred and fifty men are employed here.

28. Good sporting barrels are always made of iron and steel rods, twisted together on various principles, and forming various patterns, called *ribbon-twist, wire-twist, stub iron, Damascus*, &c. The latter is the most expensive kind, being made of compound strips of iron and steel, forged into small quadrangular rods, which are first twisted upon their own axes, then wrapped spirally round a mandril and forged into a continuous tube. The two metals, assuming different colours (the iron white, the steel black), form little knots, called here "flowers," which are reproduced with greater or less regularity all over the surface of the barrel. These flowers are often counterfeited by a corroding substance applied externally. A pair of true Damascus barrels can be bought at Liége for from 20 francs to 25 francs; the best for 35 francs and 40 francs. Bernard, of Paris, who has acquired a European reputation for these barrels, charges from 110 francs to 120 francs for a pair of No. 16 bore, and 135 francs for No. 12 bore. They are proved by himself alone. His mark passes current in France and Belgium in lieu of an official mark, there being no Government proof-house in Paris. He and three others in Paris make about 2,000 barrels per annum, which are generally sent to Liége to be mounted.

29. *M. Falisse* has in his factory some admirable machinery for boring, rifling, and stockmaking, all manufactured on the premises, and some of it quite unique of the kind. As a pin to be made cheaply must be made by 50 men, so each stock is here made by 20 machines and 30 workmen, at a cheaper rate, he says, than the common stock made by one man. His rifling machinery is the most perfect in Liége. He has also established a manufactory of percussion caps and nipples at Beaufays, near Liége, which has now passed into other hands, and is still the only private one in Belgium. He has invented some machines employed in this fabrication, and has organised similar factories for several foreign Governments.

30. *M. Francotte* makes breech-loading revolvers on a large scale by machinery, for prices varying from 40, 45, and 50 francs to 100 francs. Each of these pays a fee of 5 francs to the heirs of the late M. Lefaucheux, the inventor of the favourite system of breech-loading both for pistols and fowling-pieces. About 60,000 Lefaucheux revolvers were made at Liége last year, which must have produced a revenue of 300,000 francs to the patentee. The Lefaucheux patent for guns has expired. Few other guns are now used here for sporting purposes. Caps and ramrods are now things of the past. Empty cartridges of pasteboard and brass, with an interior fulminating cap, are made all over Belgium, but none so good as Eley's. The best fulminating powder is not made here.

31. The progress of Liége is mainly owing to the incredible *cheapness of its*

workmanship. This cheapness has, of course, increased the demand. The increased demand has again reduced the cost of production. The following are some of the comparative trade prices of Liége and St. Etienne:—

	Liége.	St. Etienne.
Single Barrel Guns.	Francs.	Francs.
Youths' gun, the commonest	5·50	not made.
Man's „ „	6·85	„
„ of false ribbon twists	8·40	12·60
„ „ Damascus twist	11·55	14·10
Double Barrelled Guns		
Of the commonest quality	14·51	not made.
„ common quality	17·50	22·10
„ false ribbon twist	21·50	22·90
„ false Damascus twist	26·05	27·26
„ iron ribbon barrels	27·95	35·72
„ steel ribbon barrels	31·50	40·52
„ Damascus barrels	55·56	60·16
Lefaucheux gun, with Damascus barrels ..	71·50	98·76
Superior qualities, from	100 to 400	100 to 500

32. *The annual production of guns at Liége is now about ten times as great as that of St. Etienne.* The number here manufactured has fallen to about 30,000 fowling-pieces annually; therefore not half as many as are bought at Liége by the French alone, notwithstanding the duty of 220 francs per 100 kilos. The Paris gunsmiths buy three-fourths of their guns at Liége, finish them carefully, and sell them as Paris workmanship. The superior qualities are about equal at Liége and St. Etienne; the produce of the former being superior in style and appearance, that of the latter in real finish. The Belgian talent for imitation is here conspicuous. The taste of every market is carefully studied; the trade-marks of other nations and makers are, I am sorry to say, counterfeited. Thus, Liége has supplanted Birmingham to a great extent in the important market of North America. A stringent law on trade-marks in Belgium is a great desideratum for British industry.

33. *The best double-barrelled Lefaucheux gun costs at Liége* 16*l. sterling.* To the eye this gun will be quite identical with a 30*l.* gun of Paris, or a 40*l.* gun of London; but in some parts it will be found inferior to either. If selected, however, with care and put into the hands of a gunsmith to be examined and "finished," it will do excellent service. From the immense scale of manufacture, a gun seldom comes from Liége thoroughly finished and regulated. The iron work will require to be case-hardened; the lock will require the closest scrutiny, and perhaps re-tempering. Here it is that England defies all competition. A pair of Wolverhampton locks will cost 3*l.*, therefore as much as an average Belgian gun, but will last for a lifetime. The Belgian lock will appear quite equal, but in a year or two the main spring will become relaxed. English iron, coal, and workmen have been brought to Belgium in order to make English steel, but in vain. This is consequently attributed to the nature of the Sheffield water.

34. *The British Board of Ordnance has bought about* 150,000 *stand of arms at Liége.* The contracts were passed about 1854 with an association of four great houses, and were finally completed in 1863, to the entire satisfaction of the War Department, as officially notified. Of this order, some 1,500 were rolled barrels from Val Benoit. The locks were all of Liége manufacture, excepting some for the navy rifles. The prices were—for the Enfield rifle musket, with bayonet, complete, 2*l.* 13*s.*; the artillery carbine, with sword-bayonet, 3*l.* 3*s.*; the naval rifle, with sword-bayonet, 3*l.* 8*s.* 5*d.* All these arms were made under the inspection of British artillery officers, and were subject to a view unusually severe for Liége. All the parts were made interchangeable, an object very difficult of attainment by manual labour. These arms were found from 8 per cent. to 20 per cent. cheaper than those supplied by the English gun trade, and at least equal in quality, but were inferior in regularity to the machine-made arms produced by the Enfield factory. During the same period some 20,000 stand were also supplied to Her Majesty's Government by the Imperial Factory of St. Etienne. This would seem to show a decline of the English gun trade since 1830, when Birmingham was the great arsenal of the world. She then was able at a short notice to supply the French Government with 140,000 muskets at 23*s.* each, but seems, from strikes and other causes, to have lost ground so much as to have been hardly able to supply 28,000 Minié rifles to our own Government in two years, 1852 and 1853.

35. *Liége was well represented at the Exhibitions of Paris and London in* 1855 *and*

1862. At the former she certainly occupied the first place for military arms. The house of Lemille there exposed a collection of 392 different specimens of fire-arms. One great medal of honour was awarded to the Liége arms trade collectively; three personal medals of honour, besides eight medals of the first class, seven of the second class, and three honorary mentions. The charge of imperfect straightening has been brought against Liége barrels. A great number of first and second-class barrels were on this occasion examined by the Jury, and were most of them found defective in this respect. The *London Exhibition* received fewer contributions from Liége; there being only nineteen exhibitors in Class XI, Section C, Arms and Ordnance. *Seven medals were awarded to Belgian exhibitors*, viz.: To MM. Simonis, of Val-Benoit, for their laminated gun-barrels; to MM. Lezaack, Dumoulin, Jansen, and Malherbe, for guns; to M. Ladry, for his rifle-rest; to MM. Coopal, for the purity of the raw materials used by them in the manufacture of gunpowder. Eight honorary mentions were awarded to Belgians in the same section. In another class a medal was awarded to M. Amand, of Ermetton, for the excellence of his charcoal barrel-iron. In ornamental arms suitable for display Liége cannot, of course, produce such works of art as are always exhibited by Paris gunmakers. Yet, in the decoration of saleable guns, her engravers work so cheaply and well that it is not uncommon for the Paris gunmakers to send their stocks and furniture to be engraved at Liége, notwithstanding the cost of duty and carriage. Many Liégois settled in Paris have risen to eminence in the gun trade, as, for instance, M. Leopold Bernard.

36. *Another Belgian factory, the powder-mill of MM. Coopal, at Wetteren,* claims here a special mention, as having earned a European reputation. All the powder used by the Belgian army is here manufactured by contract, under the inspection of artillery officers. From 1855 to 1857 Wetteren supplied the British Government with 2,400,000 lbs. of powder. As England has always enjoyed the reputation of making the best powder in the world, the selection of this and other Belgian powder-mills must be considered as highly honourable to this industry. Wetteren has always kept pace with, and sometimes originated, the leading improvements in this art. One of these which is due to Wetteren is the carbonization of wood by means of a super-heated vapour, invented here in 1842 by M. Castillon. This happy innovation enables charcoal to be calcined to the precise degree which may be required. By employing the two other ingredients in a state of absolute purity, it is now, therefore, possible to make powder always identical in quality. Thus, from an empirical it has risen to be a scientific process. This factory employs 100 hands and a steam-power of 100 horses. Though founded so long ago as 1778, it has, by good management, been preserved from explosions—an instance rare, if not unique, in the annals of this dangerous industry.

Section III.—*Government Factories.*

37. *The Belgian artillery possesses four great establishments for manufacturing and repairing arms and ammunition,* viz.: 1. The cannon foundry at Liége; 2. The small-arms factory at Liége; 3. The Arsenal de Construction (carriage factory) at Antwerp; 4. The Ecole de Pyrotechnie (laboratory) at Antwerp. There exists, besides, a shot foundry at Antwerp, intended for use in time of war. The powder is all made by contract, as also some ordnance stores. Nearly everything else pertaining to the armament of the troops and the fortresses is manufactured by the Government itself. Trials of cannon are held at the Polygon of Brasschaet, or on the Ostend beach; those of small arms at the camp of Beverloo or on the champ d'épreuves at Liége. Since 1859 the Minister of War, Lieutenant-General Baron Chazal, has imparted the greatest activity to this department. Under his energetic impulse, every practical improvement has been introduced into the system of national defences.

38. *Of all the Royal factories the Cannon Foundry of Liege stands first* in importance and celebrity. It has from time to time supplied most European States with iron and bronze cannon. Thus from 1840 to 1857 it has executed for foreign Governments 2,991 pieces of cannon and 123,000 projectiles, of an aggregate value of 140,000*l*. The Government deemed it advisable, in the interests both of science and industry, to keep this establishment constantly at work. The high quality of its productions has become well established by frequent competitive trials, especially that held at Woolwich in 1850. The superb cannon foundries of Truvia, in Spain,

and of Vienna, were imitated from that of Liége. The whole strength of the establishment is now employed upon the Belgian artillery. Consequently no orders have been accepted since 1859 for foreign Governments. It is not accessible to visitors.

39. Since the introduction of rifled ordnance the foundry has been kept in extreme activity. Bronze has been entirely discarded, experience having shown that that metal, so superior in tenacity, is deficient in the hardness necessary for rifled guns. In 1861 the new breech-loading rifled gun was adopted, and 14,461,000 *francs were voted for "transforming" the whole artillery, i. e.,* for the manufacture of new and the alteration of old guns. The Belgian cannon is, with slight modifications, that invented by Baron Wahrendorff, and adopted by Prussia. It gives perfect satisfaction. The Minister instituted some experiments with steel cannon manufactured of blocks derived from the principal steel-works in England, Germany, and Belgium. The result was so decidedly favourable to Krupp's steel that all the small guns have since been purchased of him. They are supplied by his works of Essen, in Prussia, in the rough state, then rifled and fitted with their breech-closing apparatus in the Royal Foundry. A 6-pounder of this kind has been fired 5,000 times with full charges, and showed no signs of giving way either in the grooves or at the breech. All the experience of the Belgian Artillery has induced a firm conviction of the incomparable superiority of their gun.

40. *The new ordnance* comprises 4, 6, and 12-pounders of Krupp's steel; 12 and 24-pounders of cast-iron.* The foundry has transformed on the new principle a great number of old iron 12-pounders, and has cast a great number of new ones. The former have proved excellent guns, quite equal to the latter. The different solid and hollow shot required for all these guns are made both in the foundries of Liége and Antwerp, as also by the trade. They are finished and coated with lead in the Royal foundries alone. An immense workshop has been newly erected for this purpose, as also a great number of new machines for all purposes. The ordinary field and siege artillery will probably be completed in 1865. The vast defences of Antwerp, so far as decreed by the Law of 1859, are all but finished, and even partially armed. The eight detached forts are provided with their guns and stores. The *enceinte* of the town and the future batteries on the Scheldt will require much heavier guns. What guns these are to be is not yet decided, and will depend on some future experiments. The Government already possesses an 8-inch steel 100-pounder weighing five tons, and calculated to bear a charge of 40 lbs. of powder, and to throw a projectile of 200 lbs. weight; its cost was 3,400*l.* Another still heavier is ordered.

(No. 4.)—Statement of the Number of Cannon and Small-Arms Manufactured in the Royal Foundry and Small-Arms Factory during the following Years.

	Cannon.		Small-arms.		
	For this Government.	For Foreign Governments.	Fire-arms.	Lances.	Sabres.

41. The following is a brief statement of the *antecedents and origin of the present Royal Manufactory of small-arms.* The chief improvements in the fabrication of the

* These terms afford only approximative indications of the real diameters of the new Belgian ordnance. These diameters vary somewhat from those of the old guns, and are not made public; I am not therefore at liberty to record them here.

old musket were due to the French Government. In 1777 King Louis XVI instituted a Commission in order to lay down fixed principles for the construction of all arms. This Commission caused a pattern musket to be set up on the best principles then known, and drew up a Code of Regulations defining the qualities and tests to be required in receiving the materials; describing minutely the further tests and gauges to be applied in verifying every component part, as well as the finished musket; finally, depicting in a series of elaborate engravings every separate piece and every instrument used in the process of reception. For fifty years this pattern of 1777 remained, in the eyes of the Liége workman, the standard of perfection. In 1804 the French Government established a manufactory of muskets at Liége in the old Dominican Convent, under a private contractor. This establishment only lasted for a year and a-half, but introduced great improvements in the tools, machinery, and processes employed. The new contractor relinquished the factory, and reverted to the old system of home labour, only keeping a few barrel mills and a workshop for making and repairing tools. Still the viewing Commission of that time, being composed of experienced officers and comptrollers, rendered great service in training the workmen. Young men who preferred the profession of making to that of carrying arms, and who could produce a *chef d'œuvre* in that craft, were dispensed from military service. Thus 40,000 good muskets were made annually at Liége for the Imperial Government.

42. Again, *a factory of muskets was established by King William at Liége in* 1827, under the management of a contractor, but it was subsequently abandoned. The Belgian Military Department used the building only for the reception of arms, which were all supplied by private makers. An experiment of manufacturing arms for its own account was first tried by this Government in 1838, in a hired building, and yielded so much advantage that the Government determined to build a factory of its own. To justify this measure, it was held up as intended to assist and instruct the trade. *Thus the present factory arose in* 1840. It has produced in the last ten years an average of 10,116 fire-arms per annum. Its workmanship is described by English officers as being of the first class.* All the small- and side-arms of the Belgian army are manufactured here, excepting some sabres and swords bought at Solingen. The materials employed are almost exclusively Belgian. It has happened once (in 1859) that some 12,000 muskets of the new pattern wanted as a reserve had to be purchased of the trade. The factory now occupies about 250 men on the premises, and about 300 outside, the latter principally barrel-makers. The whole labour is done by task-work, under the supervision of artillery officers, upon estimates drawn up by them. The workmen earn from 2 to 3 francs per day.

43. *The barrels are forged* in the same manner as for the trade, in the rural water-mills (*vide* paragraph 24). Pure charcoal iron is becoming every year more difficult to obtain; and as the Royal factory is obliged to purchase it by adjudication, an inferior material is often substituted. It is likely that steel will soon supersede iron for this purpose. Besides the strong barrel-iron, two other species are used, viz,, soft tenacious iron, for the furniture, and tempered iron (by cementation), for several parts of the lock, &c. This latter iron is generally derived from Germany, the Belgian works not having succeeded with it.

44. *The "usinage" of the barrels* is all executed at the factory. The first operation included in the above term, that of rough boring, is effected by a series of quadrangular plugs of tempered steel passed through the barrel. It is then annealed, *i.e.*, heated and and left to cool gradually in order to restore its tenacity, which is impaired by the boring process. Then follows an external straightening with the hammer; then a succession of internal fine-borings ("alésages"), alternating with seven internal straightenings ("dressages"). The barrel is also compassed, ground, and turned on a lathe. The best straighteners are those trained in a large factory, for the eye being the only guide, great practice is necessary for this work. A polished tube, when pointed towards the light, presents to the eye a certain number of concentric zones perfectly distinct from each other, in each of which any external object will be reflected in a corresponding number of images. If a barrel thoroughly accurate be turned round on its axis, these internal images will remain unaltered and symmetrical. The slightest inequality of the bore will show itself by a distortion of the image at that point, and must, when detected by the workman, be rectified by a blow of the hammer on the faulty point. After the third fine-boring, the outer surface, still rough and uneven, has to be brought down to a true concentrical form by the compasser, who measures the thickness of the barrel, and

* *Vide* "Report of Select Committee on Small Arms, 1854," p. 261, &c.

marks the points where there is an excess of iron to be removed by the mill-stone and the lathe.

45. *Garnishing a barrel* includes here the following operations: Forging and screwing on the breech and breech-nose; brazing and filing the tenon and sight; cutting, by a machine, the outer surface of the chamber to a perfect octagon; drilling the touch-hole and lodging the nipple. After garnishing, the barrel is proved twice; first with 27½ grammes of fine powder, a ball, and two wads; therefore more than three times the ordinary charge, which is 9½ grammes of infantry powder. Finishing the barrel includes the following operations: 1. "Basculage," *i.e.*, fashioning and adjusting the break-off and joint; 2. "Adoucissement," *i.e.*, smooth-filing and polishing the barrel, joint, and sight, and adjusting the bayonet; 3. Exposure in a damp room for a month, in order to test the metal under the effects of rust; 4. "Systémage," or percussioning, *i.e.*, fashioning the lump, and fitting the lock firmly to the barrel. This is a peculiarity of the Belgian musket. The break-off joint is different from the English breech-tang, which is screwed into the musket, and by some of our officers considered superior.*

46. *The bayonet is manufactured of two metals welded together*, viz., of soft tenacious iron for the socket, and of hard steel of "two marks" for the blade, which must offer great rigidity. The terms "two marks" or "three marks" are used for steel which, in the process of refining in bars, has been bent two or three times on itself. The blade has, after welding, to be tempered, annealed, ground, polished, smooth-filed, and proved. The socket is bored, turned, jagged, and fitted with its locking-ring. The ramrod is made of the same steel as the bayonet-blade, but receives a softer temper.

47. *The Belgian is a back-action swivel lock*, composed of eleven pieces. Two of these, the lock-plate and the cock, are of tempered iron; the nine others of steel. The cock alone is stamped in a ram-block. The other pieces are all forged by hand in common smitheries on a coal-fire; then filed, adjusted, tempered and polished, and viewed by the comptroller after each of these operations. Two smiths, twelve filers, and six fitters will make ten or twelve locks in ten hours. The steel pieces are tempered *à la volée*, which consists in heating them to cherry heat and then plunging them in cold water, and then annealed. The two iron pieces are tempered *en paquet*, or case-hardened, *i.e.*, superficially converted to steel by heating in a crucible with a cement of wooden soot, or calcined hoofs, followed by immersion in cold water.

48. The furniture of the Belgian musket consists of twenty-eight pieces, including the break-off, the trigger, the trigger-guard, the cross, heel-plate, three bands, rings, screws, rammer-springs, sights, &c. The manufacture of all these is conducted like that of the lock-pieces. The whole musket consists of forty-four pieces.

49. The stocks are made exclusively of walnut-wood, which grows abundantly in Belgium. The desiccation is effected in the factory itself, by exposure to steam. The master-stocker receives from the store a rough-chiselled stock, a barrel with its bayonet, a ram-rod, a lock, and a set of gun furniture. He has then to fashion the wood for lodging accurately the principal parts, and again to put a finishing hand to the stock when it comes back from the setter-up. The duty of the setter-up ("équipeur") is to lodge the trigger-guard, the trigger, the band-springs, and ramrod-springs; to drill the screw-holes; to flush the screw-heads; to temper and polish all the pieces; and, finally, to make the whole weapon act, by adjusting and filing where necessary.

50. *The rifling* is effected by machinery, which was mainly created in the factory itself, and once excited the admiration of our mechanists, but has been now surpassed elsewhere. There are twenty rifling benches, each of which can rifle twelve barrels in ten hours. Each barrel passes through the machine twelve times for each of the four grooves—in all, forty-eight times. The grooves have one turn in 2 mètres, or 79 inches.

51. The musket is then assembled, and *brought by the stocker to the "salle de recette," to be viewed* by the first comptroller. After a general view, it is entirely stripped, and every part is again strictly inspected and gauged by four different comptrollers, each having his own part. It is then again assembled, viewed a last time, and marked by the head comptroller, and then put into store.

52. *The estimate of the cost of a rifled musket* with its appendages made at the Royal Factory in 1860, was 45 francs 72 centimes, or 1*l.* 16*s.* 3*d.* These figures of

* *Vide* Report on Small Arms, page 268.

course only include the cost of materials and labour, not that of the buildings, the machinery, and the staff employed; therefore they cannot be held to represent the real cost of each musket. The price of those supplied by the trade in 1859 was 59 francs, or 2*l.* 6*s.* 10*d.* One of these arms is calculated to last 30 years and to stand 25,000 shots.

53. The armed forces of Belgium may be stated as follows:—

Army.	Effective force—average numbers drawing pay	35,000	
	" " absent on furlough, &c.	65,000	
			100,000
Civic Guard.	Active battalions	25,000	
	Reserve battalions	55,000	
			80,000
	Total		180,000

With the exception of four regiments of lancers, the above troops are all armed with fire-arms provided by the State. The old muskets of the army, of patterns anterior to 1841, have been put into the hands of the civic guard. Those belonging to the active battalions have been lately rifled on a new principle invented by Mr. Jansen, a gunsmith, which seems to be very suitable for all barrels. About 20,000 have been thus "transformed" by him (rifled with eight shallow grooves) at a contract price of 4 francs per musket, and now shoot very accurately at a short range.

54. *The small arms now in the hands of the infantry are of three different models*, viz., the musket of 1841, that of 1853, and the stem rifle. The first is the old smooth-bore, made after the regulation laid down at the introduction of the percussion lock, now rifled and fitted with an elevating sight. The second is the present regulation musket, and varies little from the former except in a slight increase in strength. It is loaded with $5\frac{1}{2}$ grammes of powder and a hollow cylindro-conical expansive Minié bullet, with an inner core, which serves to preserve the sides of the bullet from being torn by the explosion. This bullet, which originated with Peeters, a workman in the Royal Factory, has the advantage over the Minié and Enfield bullets of dispensing with a plug. The sight is graduated up to a range of 600 paces, but the real range of the musket is 1,200 paces. One regiment is armed with the stem rifle ("carabine à tige"), which is shorter than the musket, carries a long sword bayonet, and has a steel cylinder or stem screwed to the breech inside the barrel, in order to support the bullet (which is solid) and allow it to expand into the grooves when struck by the ramrod. This is certainly an inferior weapon, being more difficult to load and not more accurate in range than the musket. Consequently the "tige" is to be removed, and the same hollow bullets will be used for all arms.

55. The calibre of the Belgian fire-arms, $17\frac{1}{2}$ millimètres, like that of the French, is acknowledged to be excessive when applied to the new system. A fire from this bore is certainly more murderous, but is inferior in accuracy and range to that of the Enfield bore. Another serious consideration is the difference of weight between the two systems, especially as to ammunition.

	Belgian musket.	Enfield musket.
Bore in inches	0·688	0·577
Weight of arm with bayonet .. lbs.	10·	9·$\frac{1}{5}$
Weight of bullet .. .. ounces	1·740	1·083
Number of grooves	4·	3·
Both have a uniform twist of one turn in inches	79·	78·

The Belgian musket is described as equally sound and serviceable, but is certainly inferior in finish and style. The view at Enfield is more strict. The construction of the Belgian arm, as well as its finish, enables it to be made more cheaply than our own.

56. The great advantages of the *breech-loading system for the musket* as well as the cannon have not been lost sight of by the military authorities; but the problem is not yet considered to be solved. The only infantry now armed with such a weapon is that of Prussia. Opinions are still divided as to the merits of the needle gun, and the balance of opinion is against it. It is certainly the wisest course for other nations to wait till some more perfect weapon has appeared. In the meantime inquiries are being conducted with reference to the Westley Richards breech-

loader, for the three cavalry regiments armed with carbines. For target practice it is general believed here that the breech-loading rifle invented and made by M. Ghaye of Liége is the best.

57. *The "Arsénal de Construction" of Antwerp* has of late years acquired a development proportionate to that of the Royal Foundry. All the gun-carriages, caissons, waggons, and appendages of the artillery are here manufactured and repaired. The number of hands employed varies from 700 to 800, including 140 artillery soldiers and sergeants. Yet the new orders have been so heavy that much of the work, especially the rough iron-work, has had to be executed in private workshops. Since 1860 a special workshop has been established here for fabricating the metallic parts of percussion rockets, shot for rifled ordnance, and another for making pointing instruments. Large smiths', saddlers', carpenters', wheelwrights', and other workshops are also in operation here. Steam-power has only been introduced since 1861. The Belgian pontoons manufactured here have been so favourably reported on by Colonel Lovell, R.E. (who was sent on a mission of inquiry through Europe), that a whole pontoon equipage has been supplied by this arsenal to Her Majesty's War Department at a cost of 280*l.*

58. The "Ecole de Pyrotechnie" of Antwerp is established in a dependency of the ancient citadel, abutting on the river. The ammunition for the new and old ordnance and small arms is here fabricated, including fulminate, percussion caps, wads, matches, rockets, fuzes, &c. Soldiers are sent here from the artillery to be trained as artificers. They receive a theoretical and practical instruction in this art, and are then sent back to join their batteries. Of late years the processes of manufacture have been notably improved, but they are jealously guarded from view. Some sixty-four artillerymen and two engineers are employed here. All the workshops are mere wooden sheds at long distances from each other and separated by mounds of earth for safety.

I have, &c.
(Signed) H. P. T. BARRON.

Denmark.

Report by Mr. Petre, Her Majesty's Secretary of Legation.

Copenhagen, April 1865.

Foreign Trade of Denmark in 1863, *and in the first Quarter of* 1864.

THE Federal occupation of Holstein in December 1863, followed as it was by the immediate sequestration of the revenues of the Duchy, rendered it impossible for the Danish Government to obtain at the close of that year the annual Returns of imports and exports from the Custom-houses in that portion of the Danish dominions. The information, therefore, to be gathered from the official statistical Tables purporting to show the imports and exports in 1863 is confined to Denmark Proper and the Duchy of Schleswig. To the statistical Tables above-mentioned is added a commercial summary for the first quarter of 1864, at the expiration of which period the new Tariff came into operation. This summary, however, relates exclusively to the Kingdom of Denmark, the German armies having taken military possession of the Duchy of Schleswig in the interval.

The total imports and exports for the Kingdom of Denmark and the Duchy of Schleswig in 1863 amounted to 2,484,250,029 Danish lbs.,* of the official value of 76,901,135 rix-dollars (8,544,570*l.*), being an increase as compared with the previous year, leaving Holstein out of the question, of 264,012,339 lbs., of the official value of 5,833,297 rix-dollars (638,700*l.*). Roughly stated, the imports amounted to about 1,668,000,000 lbs., valued officially at about 49,000,000 rix-dollars, and the exports

* The Danish lb. is equal to 1·1023 lbs. avoirdupois. The Danish rix-dollar is equal to 2*s.* 3*d.* sterling.

to 816,000,000 lbs., valued at about 28,000,000 rix-dollars. As regards exports more especially, these Returns, however, are to a certain extent incomplete, there being no record of goods exported by the land frontier through the Holstein Custom-houses in 1863. They only comprise the exports by sea, which constitute, of course, the overwhelming proportion. To the total imports and exports for Denmark and Schleswig in 1863, amounting, as already stated, to 2,484,250,029 lbs. weight, valued officially at 76,901,135 rix-dollars, the Duchy of Schleswig alone contributed 384,691,091 lbs. valued at 14,853,509 rix-dollars, or about 1,650,389*l.* sterling. The imports and exports at the port of Copenhagen in 1863 are set down at 842,524,262 lbs. and 34,555,849 rix-dollars. This represents more than two-fifths of the total quantity for Denmark, exclusive of Schleswig, and more than half of the total value.

The following succinct summary relating to the chief items of Danish import and export is the result of an analysis of the official Tables.

Taking the exports first, I may state that in the year in question 3,463,512 töndes (the Danish tönde as a corn measure is equivalent to somewhat less than half the English quarter, or 3·8270 bushels) of corn, ground and unground, valued officially at 13,330,242 rix-dollars, were exported, being an increase of 1,038,564 töndes in quantity, and 4,029,739 rix-dollars in value. The above total is made up as follows:—barley, 1,344,056 töndes; oats, 1,245,239 töndes; wheat, 454,599 töndes; rye, 247,819 töndes; peas, 36,708 töndes, in addition to a small quantity of vetches, malt, and buckwheat. There was an increase on the year of nearly 50 per cent. in the exportation of oats, wheat, and rye. I should mention, however, that in the year 1862 the exports of corn had fallen very considerably below the average.

Under the head of vegetable products the principal items are brandy, of which 229,214 viertels (the viertel is equal to 1·7011 gallons English) were exported; rape seed, 86,206 töndes; breadstuffs, about 2,100,000 millions of lbs.; horse-beans, 13,403 töndes; and 13,750,000 lbs. of oil-cake.

Under the head of animal products butter takes the first rank; the exports rose from 7,809,341 lbs. English, in 1862, to 10,969,681 lbs., in 1863, of which 9,523,710 lbs. came from Denmark, the rest from Schleswig. The United Kingdom and Norway took nearly four-fifths of the whole between them; in about equal portions, the exports to the United Kingdom alone reaching 3,983,810 lbs. English. Of live stock there were exported during the year 30,926 oxen and cows, 4,005 horses, 37,893 sheep, and 6,570 pigs. Of bacon and meat 4,100,000 and 2,500,000 of Danish lbs. respectively. The export of wool fell from 4,302,367 lbs., in 1862, to 4,101,246 lbs., in 1863.

The Table of Imports exhibits a considerable falling-off in the importations of cotton yarn and cotton manufactures; they fell in quantity from 3,366,498 lbs., in 1862, to 1,896,253 lbs., in 1863; and in value, from 3,168,650 rix-dollars to 1,932,361 rix-dollars.

The importation of linens rose, on the contrary, from 1,967,093 lbs. to 2,509,586 lbs., valued at 1,020,000 rix-dollars, in 1863, of which Great Britain sent 981,388 lbs., in addition to 498,610 lbs. of linen yarn. There was a decrease on the year of 4,016,788 lbs. of coffee, the importations only reaching about 12,500,000 lbs. The greatest increase was under the head of iron and ironware. The importations rose from 80,458,350 lbs., in 1862, to 89,409,040 lbs., valued at 6,877,428 rix-dollars, in 1863, of which England alone furnished 67,372,600 lbs. There was also an increased importation of coal and tobacco, of which latter 7,286,000 lbs., valued at 1,612,952 rix-dollars, were imported, as against 6,119,491 lbs. in 1862. Of the above, Bremen supplied nearly 3,000,000 lbs., and Hamburgh and Holland 3,000,000 lbs. together.

The importations of sugar, syrups, and molasses amounted to 36,760,106 lbs., an increase on the previous year of 619,933 lbs. Of unrefined sugar, the Danish West Indian Colony of St. Croix supplied 12,516,840 lbs; England, Bremen, Hamburgh, the West Indies, and South America sending, together, 19,404,409 lbs., of which 10,557,133 lbs. were West Indian.

The Commercial Returns for the first quarter of 1864, during which the Austro-Prussian forces had invaded Schleswig, relate, as I before stated, to Denmark alone. The total imports and exports for the first three months of 1864 amounted to 309,640,404 lbs., of the official value of 11,406,865 rix-dollars, divided as follows:—Imports, 151,140,793 lbs, valued at 7,085,899 rix-dollars; exports, 158,499,611 lbs, valued at 4,320,966 rix-dollars. From a comparison of these figures with the Returns for 1863, of which I have given an analysis above, it appears that the official value of imports and exports for the first quarter of 1864 amounts

only to one-seventh of the official value of the imports and exports for the four quarters of 1863. This result is not attributable solely, as might appear, to the events of the war, although the Customs receipts must have been affected, in some degree, by the loss of Schleswig, but is owing, in part, to the season of the year, when the navigation is usually closed by ice, and commercial intercourse necessarily at a standstill. However severely Denmark may have suffered in other respects from her gallant but unequal struggle, her foreign commerce was little affected by the war. The late occupation of Jutland will, no doubt, during the current year, tell most unfavourably on the exportation of cattle, as the Jutland farmers have been in the habit of sending lean cattle, in large quantities, to the rich pastures of Holstein, in order to fatten them for the foreign market.

The Commercial Returns for the first quarter of 1864 give the latest statistical information published by the Danish Government, but I am indebted to the courtesy of the head of the Commercial Department of the Danish Foreign Office for the following digest, showing the receipts from customs, tonnage dues, and excise duties on Danish spirits, for the financial year 1864–65, viz., from April 1, 1864, to March 31, 1865, specifying what duties were levied in each portion of the Kingdom, compared with those levied during the previous financial year.

Total after deduction of Drawback ...	...	...	...	...	...	...	...	...	...	...	5,475,016	6,220,425	

The total revenue, therefore, from Customs, tonnage dues, and Excise duties on spirits amounted for the year 1864–65, after deduction of 124,734 rix-dollars paid for drawback on exported spirits and other articles, to 5,475,016 rix-dollars (608,335*l.*), against 6,220,425 rix-dollars (691,158*l.*), in the previous financial year, being a decrease in 1864–65 of 745,409 rix-dollars. The export duties, which are now abolished, produced in the financial year 1863–64 the sum of 64,769 rix-dollars.

The falling-off in the revenue from the sources indicated in the foregoing tabular statement is of course owing in great part to the late war, and more particularly to the occupation of Jutland. It is also fairly attributable, however, in part, to the late severe and protracted winter, which shut up the ports of Denmark much longer than usual.

The expenses of the Austro-Prussian occupation of Jutland, from the conclusion of the armistice to its final evacuation, were defrayed out of the receipts at the Jutland Custom-houses, and the surplus was paid over to the Danish Treasury. This surplus, for the two months of August and September, amounted to 237,800 rix-dollars.

The trade with Great Britain absorbs nearly one-third of the foreign commerce of Denmark. The exports to the United Kingdom, as indeed Danish exports in general, consist almost exclusively of agricultural produce and articles of consumption, such as butter, cattle, corn, oil-cake, rapeseed, and wool.

The imports consist chiefly of coal, iron and ironware, cottons and cotton yarn, linen and woollen manufactures, and colonial and foreign produce, such as coffee, cotton, indigo, sugar, and tea.

The aggregate value (official) of these imports and exports in 1863 for Denmark and the Duchy of Schleswig amounted to 24,853,544 rix-dollars (2,761,505*l.* sterling), against 19,898,305 rix-dollars (2,210,923*l.* sterling) in 1862; an increase in 1863 of 4,955,239 rix-dollars (550,582*l.* sterling). This increase was divided between imports and exports as follows:—Imports, 2,155,281 rix-dollars; exports, 2,799,958 rix-dollars.

The Duchy of Schleswig imported from the United Kingdom in 1863 goods to the value of 1,456,954 rix-dollars, against 1,035,053 rix-dollars in 1862, and exported 2,631,739 rix-dollars worth, against 2,020,327 rix-dollars in 1862.

With respect to the finances of Denmark, it is hardly possible, until the compli-

cated accounts now in process of settlement by the International Commissions have been finally regulated, and the mists occasioned by the late war have wholly cleared away, to give a perfectly accurate account of the financial condition of the Kingdom, and of the full extent of the pecuniary sacrifice which the war has entailed upon it. I am indebted, however, to the Commercial Department of the Danish Foreign Office for the subjoined statement, showing the actual income and expenditure of the country in the financial year ending March 31, 1863, and the estimated income and expenditure for the year ending March 31, 1866, thus showing the income and expenditure before and after the war.

The financial losses occasioned by the late war are estimated to amount to about 20,000,000 Danish dollars, or 2,220,000*l.* sterling. The occupation of Jutland alone entailed a loss of 7,000,000 dollars.

I reserve for a subsequent Report a more detailed analysis of the Navigation Returns for 1863. I may state, however, that the merchant navy of Denmark and Schleswig at the close of the above year, consisted of 4,297 ships, with a tonnage of 100,395¼ lasts—(the last is equal to 2 tons). Of these, 1,157, with a tonnage of 30,917 lasts, belonged to Schleswig. In addition to the above, Denmark possessed 47 steamers of an aggregate tonnage of 2,188¼ lasts, and 2,706 horse power. Schleswig possessed 16 steamers, with a tonnage of 360¾ lasts, and 565 horse power.

During the year 1863, 92,022 ships, exclusive of steamers, entered and cleared at the ports of Denmark and Schleswig, of which 67,467 were for the coasting and home trade, and the rest for the foreign trade. The registered aggregate tonnage of the above amounted to 1,334,586 lasts, of which 648,821 fell upon the home trade; and the tonnage of cargoes amounted to 741,654 lasts, of which 311,113 fell upon the home trade. The number of ships, the registered burden and tonnage of cargo have increased, both in the home and foreign trade.

(Signed) GEORGE PETRE.

Grand Total of Imports from the United Kingdom	12,739,470	10,584,189
Grand Total of Exports to the United Kingdom	12,114,074	9,314,116

Grand Duchy of Hesse.

Report by Mr. Corbett, Her Majesty's Secretary of Legation.

Darmstadt, April 1865.

Commerce and Industry, 1863.

THE Chambers of Commerce of the principal towns and centres of industry in the Grand Duchy of Hesse publish yearly statements of the general movement in all branches of trade in the districts where they situated, and at the same time offer suggestions and make demands which those Bodies consider would be beneficial

to trade. Upon these Returns, and upon information obtained from official sources, the following Report is founded.

Darmstadt.—To the generally depressed condition of trade and industry caused by the large amount of capital invested in armaments, and the general uncertainty of political affairs which before existed, was superadded in the year 1863, the effect of the civil war in America and the near approach of the period for the renewal of the Zollverein.

The effect of the American war may be ascertained by a comparison of the movements of the commerce of Hesse with the port of Bremen, through which commercial communications with the United States is carried on.

The exports from the Grand Duchy to Bremen were from 1855 to 1863 inclusive as follows :—

EXPORTS.

	Thalers.*		Thalers.
1855	245,933	1860	433,807
1856	298,475	1861	181,330
1857	404,494	1862	228,947
1858	425,690	1863	181,316
1859	573,860		

IMPORTS.

	Thalers.		Thalers.
1855	165,474	1860	448,019
1856	314,573	1861	457,039
1857	327,320	1862	438,487
1858	279,374	1863	444,272
1859	360,734		

From the above statement it appears that up to the commencement of the war the exportation increased progressively, and has since gradually declined.

The value of exports shows a decrease of 61,326 thalers as regards objects of consumption; of 21,255 thalers on raw products; of 40,183 thalers on half manufactured articles; of 7,644 thalers on manufactured articles; and of 49,258 thalers on other articles.

The uncertainty as to the future in regard to the renewal of the Zollverein had a very prejudicial effect upon trade, and caused a general indisposition on the part of capitalists to embark in new projects. In spite of these drawbacks, however, no branch of industry has suffered materially.

The commerce of beetroot was very active in 1863; 54,000 centners† were exported, valued at 27,000 florins.

The culture of tobacco, especially in the circle of Heppenheim, has been considerably developed, and was mostly disposed of to wholesale dealers.

There are 1,082 morgen‡ of land on the Berg Strasse planted with vines, which produced 3,353 ohm§ of wine, valued at 72,736 florins.

The commerce of raw skins and hides in Darmstadt increased in 1863, although the war in America was unfavourable to it, especially as regards calf and hare skins; 75 per cent. were disposed of within the States forming the Zollverein, and 25 per cent. exported to France.

The extraction of heavy spar ("schwerspath") is the most important branch of mining in the province, and about 50,000 centners were produced in 1863.

The salt works of Ludwigshalle (the property of a Company with a capital of 85,000 florins) produced 220,000 centners of common and kitchen salt in large grains, 300 centners of table salt, and 8,000 centners of salt for the use of cattle.

There were 151,656 centners of coal dispatched by water from the port of Gernsheim in 1863, against 150,329 centners in 1862.

A manufactory of chemical apparatus established at Darmstadt enjoys a wide reputation; 40 per cent. of its productions are disposed of within the Zollverein, and 60 per cent. are exported abroad.

Sixty per cent. of the crockery manufactured at Auerbach is disposed of in the Zollverein, and 40 per cent. is exported.

The manufacture of blue ultramarine was directly affected by the American war, and indirectly from the same cause, as less of this article was in consequence required in England, where the finest kinds were before much in request. The business is, however, progressing; 25 to 40 per cent. is disposed of within the Zollverein; from 5 to 10 per cent. is sent to Austria; and from 70 to 50 per cent. is exported abroad.

* 1 thaler = about 3*s.* sterling.
† 1 cwt. = 0·9875 centners.
‡ 1 morgen = 1 English acre (about).
§ 1 ohm = 1 hogshead.

Chemical articles, in spite of a fall in their price, are still in increasing demand for the East Indies and other countries beyond the sea: 36 per cent. of chemicals manufactured in the establishment of M. E. Merck, of Darmstadt, are sold within the limits of the Zollverein, 12 per cent. are sent to Austria, and 52 per cent. are exported abroad.

The establishment of Gustavsberg for the chemical preparation of wood for the construction of railways turned out in 1863 54,659 pieces, containing 326,048 cubic feet of timber, for the railway from Aschaffenburg to Mayence, and 1,040 pieces (7,255 cubic feet) for other lines; 954,950 lbs. of creosote oil were employed in their preparation.

The manufacture of matches increased in 1863.

In 1863 the railway station of Darmstadt (Frankfort-Darmstadt-Heidelberg) received 337,540 centners of merchandize, and dispatched 267,136 centners; together 604,676 centners (131,350 centners less than in the preceding year).

There were 841,647 centners of merchandize sent from the Darmstadt station of the Mayence-Darmstadt-Aschaffenburg Railway in 1863. In 1862 the amount was 990,312 centners.

In 1863 282 boats, of which 246 were in freight, arrived at Gustavsberg, the port in connection with the Mayence-Darmstadt-Aschaffenburg Railway: 40 boats left the same port laden with corn, potatoes, planks, and pitch. In the port of Gernsheim 525,828 centners of goods altogether were shipped (against 570,066 centners in 1862).

According to returns furnished by the Custom-house of Darmstadt, it appears that the following quantities of the enumerated articles paid duty in—

	1862.	1863.
	Centners.	Centners.
Raw products for fabrication and medicinal use ..	900	1,134
Uncut tobacco and stalks	1,669	1,567
Oil	1,420	1,420

1,389 ohm of liquids (wine, beer, and cider, &c.) (against 404 ohm in 1862, of which 888 ohm were wine (against 288 ohm in 1862), 850 ohm of which were sent into the States of the Zollverein; 1,255 centners of tobacco (against 1,626 centners in 1862) passed through Darmstadt in transit during the year 1863.

Thirty-two steam-engines were in use in Darmstadt (city) in 1863, and four permissions for the establishment of steam-engines were granted to tradesmen in the neighbouring town of Gross-Gerau.

Forty-three per cent. of the population of the Grand Duchy is employed in agriculture, 36 per cent. in manufactures, 5 per cent in retail commerce, and 3 per cent. in wholesale business.

The Chamber of Commerce of Darmstadt, in its Report for the year 1863, insists strongly upon the necessity of promptly accepting the Franco-Prussian Treaty of Commerce, and recommends also the conclusion of Treaties of Commerce with Italy, Switzerland, and Russia. It demands also the adoption of a new law concerning trade marks; of a law allowing the negotiation of dock warrants; the establishment in Germany of an uniform monetary system, of which the mark (equal to 10 groschen = 1 franc 25 centimes) should be the unit, to be sub-divided into 10 pfennings. It is added that the adoption of a gold coin of the value of 20 francs would bring the monetary system into connection with that in use in France, Belgium, Italy, and Switzerland.

Mayence.—The Chamber of Commerce of this city, in its Report for the year 1863, demands the formation of a School of Commerce, the construction of a new port upon the Rhine, and the establishment of a stone bridge to connect the city with the town of Castel, situated on the opposite side of the River Rhine.

The whole quantity of merchandize received at and despatched from Mayence (exclusive of goods in transit), amounted to 8,334,159 centners: 4,877,031 centners by the two railways, and 3,447,128 centners by water. Of this total, 343,150 centners were received from Holland, and 343,652 centners were exported to that country, showing together a movement of 686,802 centners in that direction. The total transport of goods by the "Ludwigs-bahn" (along the Rhine bank) amounted in 1863 to 10,202,424 centners.

The Taunus Railway, in spite of the opposition caused by the completion of the direct line from Frankfort to Mayence, and which opened in that year, carried 1,554,402 centners of merchandize (in 1862, 1,785,447 centners). The Society of Tug-boats in the Rhine carried about the same quantity of goods in 1863 as in the

year preceding, viz., 1,546,543 centners in the former year, and 1,557,187 centners in the latter,—a difference of only 10,644 centners in favour of 1862.

According to the registers of the Rhine Custom-house, the following figures show the total general movement of goods conveyed by water in 1863, viz.:—

	Centners.
By Rhine (upwards)	9,471,637
Main do.	2,251,808
Rhine (downwards)	5,540,940
Total movement	17,264,385
Ditto in 1862	17,745,286
Less in 1863 by	480,901

The following quantities of wood (in rafts) were forwarded past Mayence:—

	Cubic Mètres.
Hard wood	45,407
Soft ditto	443,400
Total	488,807
In 1862	458,281
Increase in 1863	30,526

It cannot be too often repeated that the importance of navigable rivers and canals, far from having decreased, has greatly increased since the introduction of railways into Germany. The former are not only a necessary complement to the lakes, but serve also as a valuable counterpoise to the monopoly which the railways would otherwise enjoy; and it is hoped that some, at least, of the vast canal projects in connection with German rivers may meet with the attention their importance to the country deserves.

The corn trade of Mayence, which was formerly of importance, is now reduced to little or nothing. There is only one establishment in the town engaged in this business, which buys corn on commission in Hungary, and forwards it direct to its destination. Cologne is now the centre of the corn trade of the Rhenish provinces.

The manufacture of effervescing (fictitious) wines at Mayence increases yearly. They are exported principally to England and the British colonies.

The commerce in hops, which increases year by year in importance, remained in 1863 without the great variation in prices which occurred in former years. This is attributed to the connection which exists with the English hop market. There was little speculation, and although the quantity in store was small, prices remained low. Both in England and Germany, over-speculation and consequent losses has been followed by caution. The state of the English money market was also unfavourable to speculators. The high price of gold in America caused an increase of exportation of hops from that country, and thus exercised a considerable influence on prices in England. The demand for hops is continually on the increase in Germany, France, Belgium, America, and Russia, to keep pace with the enormous extension of beer-brewing, which is still far from having reached its culminating point in those countries.

The brewery business was prosperous in 1863. The quality of the beer of Mayence is excellent, and it enjoys a wide-spread reputation. The quantity exported increases yearly. It is complained, however, with justice that the higher dues payable in the manufacture of this beverage in Hesse Darmstadt than in the neighbouring States, and the imposition of half-a-kreutzer per maas on its exportation, place it on a disadvantageous footing, and make competition difficult.

The exportation of wine from the Grand Duchy in 1863 amounted to 71,873 hectolitres, of which 51,155 hectolitres were exported abroad, and 20,716 hectolitres exported to Zollverein. In these figures are included 43,061 hectolitres exported; 19,375 hectolitres to Zollverein; together, 62,436 hectolitres of fictitious champagne wine and effervescing Rhine wine, all of which is manufactured in Mayence, and the origin of which no attempt is made to conceal.

The principal articles manufactured at Mayence are the so-called Italian paste, chemical productions, leather (morocco and shagreen), and shoes and boots, of which 1,200,000 francs worth were exported in 1863.

Almost all the carriages for the use of the railways in the Valley of the Rhine are built at Mayence; here, also, are built all the carriages in use at the Courts of Nassau, the two Hesses, and the Saxon Ducal Courts.

A considerable quantity of reed and straw chairs are made at Mayence.

About 30,000 were made in 1863, and from 10,000 to 15,000 were imported for transmission to other parts within the limits of the Zollverein.

The extraordinarily high price of cotton has reduced the commerce in cotton goods by 50 per cent. The price of flax and wool, in consequence of the rise in price of cotton, increased considerably. In flax the rise was from 25 to 30 per cent.

Twist and worsted yarn, formerly supplied almost exclusively from England, are now made more cheaply and of better quality by German manufacturers. The same may be said of flax yarn made by machinery, formerly supplied by England and Belgium.

The booksellers in Mayence participated in the general prosperity which attended the editorial business throughout Germany, and did a trade estimated at 300,000 florins. In Germany 11,394 works were published in 1863.

The printers of music had reason to complain of a great decrease in their trade consequent on the troubles in Poland and Russia. They were compensated in some degree by the greater activity of the trade with America.

Offenbach.—It is remarked that no house of business in this town suspended payment during the year 1863.

The Chamber of Commerce reports that there existed a great activity in all branches of business, and that the wool trade has become largely developed on account of the high price of American cotton. It demands the free entry of fresh lard used in the manufacture of perfumery, and a diminution of the duty charged on alcohol used in the manufacture of varnish and varnished leather. It also recommends a diminution of the duty charged on cotton thread, the establishment of a school of design, and the acquisition of a collection of models.

The number of manufactories is continually increasing at Offenbach. Much difficulty, however, exists in finding good workmen, although wages have latterly increased considerably (nearly 25 per cent). The rate of wages varies from 4 to 15 florins a-week.

The following list shows the importance and variety of the industrial establishments of the town:—

2 manufactories of felt prepared with bitumen.
3 spinning establishments, cotton and yarn.
15 builders.
1 manufactory of white lead.
3 sculptors.
13 sculptors in wood and ivory.
6 distillers of brandy, liquors, and vinegar.
4 printing establishments.
2 booksellers.
4 brush manufactories.
2 manufactories of coloured paper.
2 carriage builders and makers of patent axles.
10 manufactories of chemicals.
1 manufactory of chicory.
8 ditto cigars.
2 ditto chocolate.
1 ditto stays.
2 ditto snuff boxes.
3 bronze foundries and manufactories of articles of bronze.
6 shops for sale of articles in iron, steel, and brass.
27 shops for sale of merchandize sold by yard.
50 manufactories of portfolios, and fancy articles in steel, leather, and wood.
9 dyers.
3 manufactories of felt articles.
8 ditto of ironmongery.
3 tanneries.
4 foundries of articles in yellow leather.
4 shops for sale of glass and china.
1 manufactory of gold and silver lace.
10 engraving establishments.
1 manufacturer of plaster figures.
1 establishment for the preparation of felt.
2 manufactories of gloves.
3 establishments for sale of wood and planks.
3 hat manufactories.
1 manufactory of instrument cords.
1 shop for sale of ditto.
6 manufactories of combs.
6 establishments for confection and sale of clothes.
1 manufactory of kid leather.
1 establishment for bone crushing and artificial manures.
3 manufactories of buttons.
9 leather sellers.
6 leather and polished leather manufactories.
2 manufactories of glue.
9 lithographic establishments.
6 manufactories of machinery.
6 ditto of drugs and colours.
6 ditto of articles used in making machinery and watches.
1 music printer and seller.
2 manufactories of needles.
2 ditto of wafers.
2 ditto of perfumery and scented soaps.
1 furrier.
2 manufacturers of gingerbread nuts, for which Offenbach is famous.
12 fringe makers.
2 engravers in relief.
19 saddlers.
3 umbrella makers.
4 type founders.
8 manufacturers of shoes.
9 ditto of soap.
1 ditto of playing cards.
18 ditto of articles of steel.
27 ditto of articles formed of steel and brass.
2 ditto of stearine and wax candles.
6 coal dealers.
4 walking-stick makers.
1 straw hat maker.
2 manufactories of tobacco (1 snuff and 2 smoking tobacco).
2 manufactories of wall paper (and shops for sale of ditto).
6 ditto of coverlids and silk purses.
3 ditto of oilcloth.
2 banks and money changers.
1 wool-spinning establishment.
4 wine merchants.
1 tin founder.

Together forming a total of 437 establishments carrying on business on a large scale.

The population of Offenbach is between 16,000 and 17,000.

In the different establishments in the town 54 steam-engines were at work, and the number has since increased.

134,426 centners of merchandize were received at, and 202,015 centners despatched from, the railway station at Offenbach during the year 1863.

The transport of merchandize by water inwards and outwards from Offenbach amounted to 13,150 centners, of which 10,161 were sent to Frankfort and Mayence.

The following statement shows the per-centage of principal articles of commerce included in the above Returns:—

	Per-centage.		Per-centage.
Soap, candles, &c.	24	Paper, oilcloth	4
Tobacco, snuff, smoking tobacco, and cigars	20	Articles of wool and cotton, clothes	6
Leather and fancy articles of leather	10	Iron goods, machinery, parts of ditto, metal plates	5
Varnish, colours, &c.	11	Various	19
Wine, beer, brandy	1		

The following shows the quantities of the principal articles of commerce on which duty was paid in 1863 in the Custom-house of Offenbach (on entry):—

	1863.	In 1862.
	Centners.	Centners.
Wool yarn	282	351
Resin	224	—
Raw goods (mineral, animal, and vegetable)	564	—
Oil of turpentine	185	269
Iron and steel goods	295	588
Hare and rabbit skins	278	13
Tanned leather	234	231
Stained leather	239	191
Raw tobacco leaves	8,548	9,132
Palm and cocoa oil	12,936	15,057
Tallow	3,426	2,339
Pottery	246	94

The whole weight of goods on which duty was paid in 1863 amounted to 28,810 centners, a decrease of 965 centners as compared with the preceding year.

In the year 1834, 236 workpeople paid, together, 41,462 florins into the savings' bank, and 12,205 florins were withdrawn. In the year 1863, 2,797 persons paid 934,481 florins into the bank, and withdrew 287,420 florins.

Friendly societies affording aid to workmen in case of sickness have become very numerous.

Cercle of Alsfeld (Upper Hesse.)—The following is a Return of goods (as far as it can be ascertained from information furnished by the heads of different establishments) imported and exported in 1863 within this district:—

	Imports.	Exports.	Total.
	Centners.	Centners.	Centners.
Cotton and linen yarn	7,000	..	7,000
Tissues—linen, cotton, and half linen	..	9,000	9,000
Tobacco	9,000	7,000	16,000
Colonial goods (oil, glass)	10,000	..	10,000
Spirits of wine, brandy, fruit wine	20,000	..	20,000
Meal fruits, &c.	60,000	..	60,000
Leather and leather goods	300	100	400
Wool and woollen cloth	1,700	200	1,900
Beer, hops, &c.	100	11,000	11,100
Meat, cattle	40,000	100	40,100
Rags, bones, butter, &c.	200	1,800	20,000
Seeds	200	200	400
Coal	3,500	..	3,500
Anthracite	5,000	..	5,000
Salt	4,000	..	4,000
Wood, wooden goods, horn	6,000	..	6,000
Chalk, tiles, oven stones	23,000	600	23,600
Total	190,000	39,000	229,000

In 1857 the whole movement amounted to 130,000 centners, or rather more than half that of 1863.

The number of spinning factories and manufactories of packing cloth is on the

increase in Alsfeld. There were in 1863 twelve establishments, which produced in that year 7,000 centners of woollen yarn, 9,000 centners of manufactured goods, and from 50,000 to 60,000 pieces of packing cloth, valued at from 20,000 to 24,000 florins.

The purchase of flax and yarn for exportation and the low rate of duty charged on English jute goods (20 silver groschen) has caused, however, a decline in the production, as compared with the years 1855-58. To counteract this state of affairs, the Chamber of Commerce suggests the suppression of the duty charged on the entry of raw jute; the reduction of the duty charged on jute yarn from 2 dollars to 10 silver groschen, and increase of duty on threads to No. 21 (Prussian measure) inclusive; and the erection in Alsfeld of a spinning establishment for the lower numbers of thread.

The two woollen cloth manufactories in this district produced 1,000 pieces of cloth, valued at 48,000 florins; also 50 centners of woollen yarn for stockings, 12,000 ells of woollen cloth were turned out, varying in price from 1 florin 10 kreutzers to 4 florins 30 kreutzers the ell.

9,050 centners of raw tobacco were imported and 6,650 centners of tobacco and cigars were exported, showing a considerable increase on former years.

The iron business in 1863 in the district Biedenkoff did not improve since the year preceding. Bar iron maintained its former low price. There was a slight improvement towards the end of the year, but not sufficient to make it worth while to produce it. A better business was done in cast iron, which commanded (in comparison, at least, with bar iron) tolerable prices.

The Karlshütte forges produced—

In 1861	.. .. ..	68,630 florins' worth of iron goods of all sorts.	
1862	.. .. ..	91,500	„ „ „
1863	.. .. ..	100,852	„ „ „

The Ludwigshütte forges produced—

In 1861	.. .. ..	184,500 florins' worth of iron goods of all sorts.	
1862	.. .. ..	200,750	„ „ „
1863	.. .. ..	209,500	„ „ „

The Wilhelmshütte forges produced—

In 1861	.. .. ..	113,000 florins' worth of iron goods of all sorts.	
1862	.. .. ..	1,297,000	„ „ „
1863	.. .. ..	115,000	„ „ „

The clothmakers in Biedenkoff turned out 12,000 ells of cloth, which was sold at prices varying from 1 florin 10 kreutzers to 4 florins 30 kreutzers per ell. The wool employed came chiefly from Cassel. In the year 1863, 300 centners of wool were employed in the fabrication of stockings.

Giessen enjoys a constantly increasing prosperity from its position on two most important railway lines, and in addition to the industrial establishments already existing (among which are nine tobacco mills), a spinning mill, a manufactory of furniture, a manufactory of confectionery goods, and a manufactory of liquors were established in 1863.

The following statement shows the quantities of principal foreign goods on which duty was paid at the Custom-house of Giessen:—

Articles.	Centners.	Articles.	Centners.
Cast-iron goods	522	Coffee	5,797
Wrought ditto	54	Shelled rice	719
Dried Southern fruits	48	Raw tobacoo	11,986
Pepper	57	Oil of turpentine	106

Returns from five only out of the nine tobacco manufacturers have been received, from which it appears that, together, they manufactured 21,133 centners of tobacco of all kinds.

215,270 centners of goods were received at and 262,571 centners despatched from the Giessen railway station in 1863.

The following were the average prices of agricultural productions in the market of Giessen during the year 1863, per malter (= about 5 quarters):—

	Fl. k.		Fl. k.
Maize	11 12¾	Potatoes	2 28½
Wheat	8 4½	Peas	7 19½
Barley	6 13½	Vetches	6 47
Oats	3 46	Lentils	7 43¾

In the cattle market of Giessen in the year 1863, 12,534 head of cattle 9,469 pigs were disposed of.

The following Table shows the results of the harvest in the district in the year 1863 :—

Description of Crop.	Sown.	Crop. Per Morgen.		Whole Crop.	
	Morgen.	Malter.	Centner.	Malter.	Centner.
Maize	10,204	3·62	..	36,998	—
Rye and wheat	15,646	3·43	..	53,677	—
Barley	12,763	4·86	..	61,490	—
Oats	8,012	5·28	..	42,318	—
Millet	48½	1·32	..	63½	—
Peas	2,955½	2·41	..	7,136	—
Lentils	389	1·50	..	582½	—
Beans	50½	2·50	..	126½	—
Vetches	626	2·28	..	1,426	—
Colza	1,449	2·00	..	2,908¾	—
Flax	1,200½	..	1·19	..	1,429½
Potatoes	10,782½	25·01	..	269,714	—
Roots	6,256	..	79·55	..	497,682
Cabbages	1,117	..	37·40	..	41,777
Hay grass	19,247	..	17·47	..	332,428
After grass (grammet)	18,590	..	607	..	112,957

The whole value of live stock in the district of Giessen in December 1863 was estimated at 1,716,203 florins.

The cloth makers and wool spinners in the district of Schotsen produced of woollen goods—

In 1861	2,233 pieces,	valued at	90,000 florins.
1862	2,500 „	„	100,000 „
1863	2,834 „	„	105,000 „

In the slaughtering establishments in same district were killed—

In 1861	3,011 beasts of all kinds.
1862	3,710 „
1863	3,335 „

From these animals were manufactured 1,750 centners of sausages (in 1863), which are disposed of in the Grand Duchy and neighbouring States. The alarm occasioned by the presence of the "trichinia" sickness exercised an unfavourable influence upon this business.

Worms.—In the year 1863 the weather was unfavourable to the pulse harvest as regards quantity, but the quality was very good. The harvest in general was an average one. The fruit crop, with the exception of plums, was middling in quantity and quality. The vintage was inferior both in quantity and quality to that of 1862, and the wine produced was very moderate.

In the two Cantons (Worms) 5,886 Hessian morgen of vineyards produced 29,294 ohm of wine, against 37,842 ohm from 6,461 morgen in 1862.

The annexed Table shows the quantity of land cultivated in the district of Worms, the amount of production, and its value, in the year 1863 :—

Crop.	Hess. Morgen sown.	Quantity.		Value per Unity.	Total Value.
		Malter.	Centner.	Fl. k.	Florins k.
Maize	28,679	133,519	..	11 30	1,535,468 30
Wheat	25,924	147,363	..	9 0	1,319,267 0
Barley	31,712	171,295	..	8 0	1,370,360 0
Spelt	3,906	36,459	..	5 0	182,295 0
Oats	9,647	74,541	..	5 36	417,261 36
Millet	41	136	..	11 0	1,496 0
Welschkorn	66	220	..	11 0	2,420 0
Pulse	644	2,264	..	14 0	31,696 0
Colza	7,274	33,599	..	19 30	655,180 30
Potatoes	30,108	1,258,080	..	3 0	3,774,240 0
Flax and hemp	215	..	597	24 0	14,328 0
Beets, all sorts	38,695	..	1,343,885	0 20	447,961 40
Clover and hay	44,677	..	793,216	2 48	1,692,194 8
Cabbages	615	..	21,104	3 0	63,312 0
Total	222,203	..	..	..	11,507,480 24

The Agricultural Society of the province, convinced of the necessity of improving the breed of cattle, has acquired a number of foreign bulls.

The number of horses, cattle, pigs, &c., in the province amounted to 75,388 head, valued at 4,121,553 florins. In the previous year the value was 3,783,437 florins.

The returns of the port of Worms show that 431 sailing vessels entered and cleared out during the year 1863. Exclusive of potatoes, the whole quantity of goods and production of the soil carried into and out of the port by steamer and sailing vessels amounted to 656,360 centners; of liquids, 143 barrels (of 7½ ohm each), and 34 millstones.

Of the above-mentioned were entered inwards :—

	Centners.		Centners.
Coal	333,112	Bone dust	547
Maize	9,764	Manures (artificial)	1,140
Bark	8,995		

And exported:—

	Centners.
Barley	145,747
Rye	18,702
Fruits	34,455

At the railway station of Worms there arrived in 1863, 311,565 centners of merchandize; the quantity despatched amounted to 469,599 centners; together 781,164 centners.

The following quantities of goods paid duty at the Custom-house of Worms in 1863 and 1862 :—

	1862.	1863.
	Centners.	Centners.
Coffee	1,796	2,132
Tobacco (in leaf)	1,288	1,243
Oil	5,358	6,607
Sheep's wool	1,620	1,129
Packing cloth	203	91
Chemicals	275	485
Cotton yarn and cotton goods	250	57
Hides, hair	675	2,509

The manufacturers of varnished leather in this province have suffered from the effects of the American war, the troubles in Poland, and the unsettled state of Italy. Relying, however, upon the good quality of their goods they have not relaxed their efforts to increase production, or their endeavours to find new markets.

No returns have been published of the quantity or value of leather manufactured. The other principal branches of industry are in a flourishing condition. They consist of manufactories of glue, chemicals, artificial manures, buttons, and cigars.

The wine trade in 1863 was very flourishing, and is expected to be still further developed in consequence of the greater facilities of communication which now exist with other countries.

The exportation of light country wine to North America was very considerable. The sale of the wines of Hesse and the Palatinate will increase probably considerably in the North of Germany in consequence of the abolition of transit dues in Prussia and adjacent countries, which will shortly take place.

The cultivation of tobacco in the neighbourhood of Worms, known in commerce as "Pfalz tabac," as well as that grown in Baden and Rhenish Bavaria, was very extensive in 1863. The crop amounted to a weight of 400,000 centners against 300,000 centners in 1862. A great part of the crops of 1857, 1858, 1859, and 1861 was exported to Holland and Belgium, but the crop of 1860, which was of excellent quality, and well adapted for the fabrication of cigars, was disposed of to Spain and England.

The trade in oil and grease for machinery becomes daily more extensive.

In 1863 the cotton manufacturers complained of the effect of the war in America; on the other hand, the woollen, linen, and silk manufacturers did a good business.

Trade in colonial productions, in wood and coal, were all in a flourishing condition.

The Chamber of Commerce of Worms in concluding its Report declares that in view of the principles of free trade now being introduced into the country, it is essential, as far as practicable, that all fetters should be removed from commerce

and industry; Germany, it is said, ought to take the liberal commercial policy of England and the well-calculated terms of the Franco-Prussian Treaty as its model, and if this system is adopted no fears are entertained but that German industry and perseverance will ensure the most brilliant results. If perfect freedom is not realized it is considered that the steps already taken in that direction will prove more hurtful than otherwise.

Bingen.—The movement of merchandize at Bingen by water in 1863 was very inferior to that in 1859, being 941,732 centners in the latter, and only 430,622 centners in the former. This falling off may be attributed to the growing importance of the neighbouring port of Bingenbrück, situated on Prussian territory, and in direct communication with the Coblentz and Oberstein railways.

In 1863 the wine made in the district was inferior in quantity and quality to that of the year preceding; 8,722½ morgen of vineyard produced only 32,841 ohm of wine, half the quantity made in 1862. In 1863, 17,273 malter of wheat were sold in the market of Bingen.

3,167 steamers and 394 sailing vessels entered the port of Bingen in 1863. The general movement of merchandize was:—

	Centners.
By water	430,622
land (rail)	506,402
Total	937,024

Bingen possesses various manufactories of tobacco, starch, glue, isinglass, stearine candles, effervescing Rhine wine, and chemicals. The town possesses also several establishments for the preparation of white leather and tanneries.

The tobacco manufacturers felt the effect of the war in America, which occasioned a great scarcity of tobacco and tobacco stalks from Virginia and Kentucky, and of which the price was very high. The greater part of the tobacco manufactured in this district is exported to Bavaria, Wurtemberg, Baden, Hesse (Cassel), and Nassau; a smaller proportion is disposed of in Prussia and North Germany on account of the transit dues with which it is charged. These dues cease, however, on 1st July next. These factories employ 350 hands. About 9,258 centners of American tobacco, and 900 centners of tobacco of the Palatinate are worked up into 8,535 centners of smoking tobacco and snuff, and 16,138,000 cigars.

The starch manufactory is worked by a steam-engine of 5-horse power, employs 14 workmen, and produces annually about 5,000 centners of wheat starch, which is exported to Holland and Switzerland.

The manufactory of glue produces annually about 1,200 centners.

About 1,900 centners of leather for boot soles are prepared annually.

A large business is also done in wood, coal, and wine. 25,000 cask staves, 11,000 beams, and 1,000,000 vine poles, 400,000 planks (10 feet long), and 60,000 planks (16 feet long), were sold during the year 1863.

I shall close this Report by a statement, as shown in the following Tables, of the statistical situation of the mineral and metallurgic industry of the Grand Duchy at the end of 1861, to which date only returns have been made up and published:—

MINES.

Description of Mines.	Number of Mines.	Number of Miners.	Production of Mines.	Value of Production at Place of Exportation.
			Centners.	Florins.
Coal	8	328	696,694	137,562
Iron	35	316	397,746	87,816
Lead	2	24	1,167	5,811
Copper	3	65	35,000	12,500
Manganese	4	39	31,087	32,758
Blacklead	1	4	1,600	640
Total	53	776	1,363,294	277,087

METAL WORKS.

Description of Works.	Number of Establishment.	Number of Workmen.	Production of Works.	Value of Production.
			Centners.	Florins.
Smelting works	7	287	144,837	520,219
Iron foundries	4	259	22,798	188,452
Iron manufactories	13	130	50,038	433,396
Copper foundries..	1	7	200	16,600
Total	25	676	217,883	1,152,667

The following Tables show how the different mineral and metallurgic establishments are distributed among the three provinces into which the Grand Duchy is divided:—

MINES.

Provinces.	Number of Mines.	Number of Miners.	Production of Mines.	Value of Production.
			Centners.	Florins.
Starkenburg	3	23	19,437	5,099
Upper Hesse	39	679	1,106,342	229,819

REFORM CLUB
PALL MALL

Greece.

Report by Mr. Farquhar upon the Financial Situation of Greece.

Athens, November 28, 1864.

THE annexed Table gives in an abbreviated form the estimated receipts and expenses of Greece for the five financial years from 1860 to 1864 inclusive, and is intended to show the principal sources of her revenue and expenditure.

The accounts for the financial year extend over twenty-two months, commencing on the 1st of January and ending on the 31st of October of the following year. Thus the financial year 1863 ended on the 31st October, 1864.

The above Table could be compiled only from the estimates voted, as no account of the actual sums received and expended has appeared since 1857, with the exception of some general information up to the end of the financial year 1862 lately presented to the National Assembly by M. Sotiropoulos, the present Minister of Finance, which will be alluded to later.

Revenue.

The average of the revenue for the five years 1860 to 1864 is slightly superior to that of the expenditure.

	Drachmas.	£
Average of Revenue	23,377,207	= 834,900
„ Expenditure	23,298,887	832,103

According to the statement of M. Sotiropoulos, above alluded to, the revenue attained its highest figure in 1860, in which year it amounted to 24,046,776 drachmas (858,814*l.*), about 33,900*l.* less than the sum estimated in the budget. Thus in its best year the revenue of Greece fell considerably short of one million sterling.

In the budget for the year 1864 the estimated revenue voted by the Assembly is 23,348,688 drachmas (833,882*l.*), of this 17,902,000 drachmas (639,357*l.*) is to be raised by taxation. In 1861 the population of Greece amounted to 1,096,810 souls, the average taxation upon this computation would be 16½ drachmas, or 11*s.* 8*d.* per head.

The following statement shows the existing taxes and the amounts expected to be raised by them according to the budget for the financial year 1864.

	Drachmas.	
Direct Taxes.		
Land tax and usufruct	7,632,000	
Tax on bees	60,000	
Tax on pasturage	150,000	
Tax on cattle	1,350,000	
Tax on licenses	400,000	
Tax on houses	900,000	
		10,492,000
Indirect Taxes.		
Customs	5,000,000	
Stamps	2,100,000	
Sundries	310,000	
		7,410,000
Total		17,902,000 = £639,357

It will be seen that the land tax and usufruct, the customs and the stamps, are the three principal items of revenue.

The local or communal taxes are not high, and amount to about 2 per cent. per annum on the proceeds of property within the commune.

The Government monopolies of salt and emery stone add considerably to the income of the State, and a very large increase is to be observed in the budget of 864 in the sums to be raised by sales of Government property, consequent upon a law recently passed facilitating transfers by the Government.

The land tax is a tax voted annually upon the produce of the soil. It used to amount to 10 per cent., then to 9 per cent., and has now been reduced to 5 per cent. upon cereals, with special dispositions respecting other kinds of agricultural produce. It used to be levied in kind and upon the spot, and is generally farmed. When tax collectors are employed, in order to encourage them to defend the interests

of the Treasury, they receive ½ per cent. upon all they collect; moreover, to prevent evasions, the farmer of the tax or the collector used to be invested by law with considerable powers; his permission was necessary to enable the landowner to commence reaping his crop, and although this permission had to be granted within a term specified by law, ripe crops have been known to suffer seriously on account of its being arbitrarily withheld. The proprietor was also obliged to convey the Government share of his crop to the district port or market, if within a distance of fifteen miles.

By the law now in force proprietors must pay the Government twentieth in money instead of in kind, at a valuation made by certain authorities designated by law; vineyards and gardens are taxed at a valuation by the "stremma" (about one-third of an acre); and the most valuable articles of Greek exportation, viz., cotton, currants, and dried fruits, lemons, madder, oranges, silk, valonea, vermilion, and all the produce of Laconia, have been relieved of the burden of the land tax, and pay instead a duty of about 7 per cent. *ad valorem*, according to an official valuation, on exportation. The articles just enumerated pay no tax or duty whatever when consumed in Greece.

The land tax is still looked upon as a burden upon agriculture, and as injurious to an agricultural country like Greece, whose exports consist almost entirely of the produce of her soil. It is rather the working of the tax and its mode of collection than its amount which is now objected to; and it is alleged with reason that its reduction to 5 per cent. has entailed a diminution of revenue estimated at 3,000,000 drachmas (107,143*l.*) in the year 1863, without a corresponding advantage to the cultivators or the country; the former still complain of the system, whereas the expense of the machinery for collecting a tax of 5 per cent. is equal to that for collecting one of 10 per cent.

The usufruct is a tax or rather rent of 15 per cent. paid upon the produce of national lands farmed by private individuals. No reliable information can be obtained respecting the national domain. I am informed, however, by a gentleman in the Finance Department that the proceeds of the land tax and of the usufruct (always lumped together in the accounts) are now about equal in amount, and that the national lands which are farmed produce principally cereals, currants, and valonea, as well as vines and olives. Cereals and currants pay the usufruct at a valuation on the spot, valonea on exportation.

The amount realized by the stamps does not call for special remark. M. Sotiropoulos fears that the amount raised under this head in 1864 will fall short of the estimates.

The latest accounts of the Customs' dues are for the financial year 1862, and these are imperfect, as only a general statement of results is given, and there is no means of ascertaining how much the duty levied on each article amounted to.

Greek commerce is divided into "Commerce Général" and "Commerce Spécial," the former comprises all goods imported into and exported from the country without distinction of destination or origin. The latter consists of all imported foreign merchandize cleared for consumption in Greece, and of the exports of national origin.

The Commerce Général for 1862 represented a total value of 81,432,392 drachmas (2,908,335*l.*), of which the imports amounted to 1,753,916*l.*, and the exports to 1,154,419*l.*

The Commerce Spécial amounted to,—

	£	Drachmas.
Imports	1,576,018	
Exports	1,000,986	
Total	2,577,004	= 72,156,121

The Tables for 1862 show a decrease in imports and an increase in exports over the two preceding years.

The total receipts from the Customs in 1862 amounted to 4,188,365 drachmas (149,583*l.*), distributed as follows:—

	Drachmas.	£
Import duties	3,477,120	= 142,183
Export duties	522,796	18,670
Navigation dues	132,133	4,719
Bonding dues	38,246	1,366
Fines, &c.	18,070	645
Total	4,188,365	= 149,583

The estimated receipts from the Customs for the year 1863 are 4,177,500 drachmas (149,196*l.*), and for 1864 5,000,000 drachmas (178,571*l.*).

Currants are by far the most important article of Greek exportation; their average exportation during the years 1860, 1861, and 1862 amounted to 49½ per cent. of the entire exports of Greece; nearly all of them are sent to England. Greek exports to England in 1862 amounted to 50 per cent. of her export trade under the head of Commerce Spécial. The currant crop this year is calculated to amount to about 35,000 tons for Greece and 15,000 tons for the Ionian Islands, worth, according to the average of the prices they have hitherto sold at, about 533,330*l.* It is impossible to calculate exactly the revenue likely to be derived this year from their exportation, but the export duty levied as an equivalent for the land tax may be set down at about 30,000*l.*, and the real export duty at 5,714*l.* Supposing the usufruct on the currants grown on the Government lands to be equal to the amount paid instead of land tax, the total revenue raised upon currants this year would amount to upwards of 65,000*l.*, or more than 12 per cent. of their value.

A large increase of revenue is expected in this and future years from the great quantity of cotton which is now being grown in Greece. The progress of the cultivation of cotton has been so remarkable lately, and has now become of such importance to the country, that I have thought it right to afford such information as I have been able to obtain upon the subject, as an annex to this report.

The average of the Customs duties upon goods imported into Greece is calculated to amount to about 10 per cent. on their value, and it is to be observed that they are evenly distributed, that is to say, that nearly all articles pay a moderate duty; the export duties are very low, and are being progressively reduced every two years: according to existing laws they will cease to exist after the year 1867.

Expenditure.

It is impossible to give any reliable details respecting the expenditure of the public money in Greece, the accounts being always so many years in arrear that at the time of their appearance they can be interesting only as matter for history.

According to the Budget voted for 1864, the principal items of expenditure are—

PUBLIC DEBT.

	Drachmas.	£
Foreign	1,055,496 =	37,696
Internal	906,870	32,388
Pensions	1,804,176	64,434
Total	3,766,542 =	134,518

PUBLIC SERVICE.

	Drachmas.	£
Ministry for Foreign Affairs	575,209 =	20,543
„ of Justice	1,569,523	56,054
„ of Interior	3,871,894	138,282
„ of Religion and Education	1,227,806	43,850
„ of War	5,374,629	191,951
„ of Marine	1,350,000	48,214
„ of Finance	954,760	34,099
Administrative Expenses	1,679,235	59,973
Total	16,603,056 =	592,966

Besides this there are the King's Civil List, the salaries of the members of the Legislature, and some other special expenses.

These sums do not appear exorbitant, but it must be remembered that a miniature revenue is being dealt with, and that the saving of 100,000*l.* per annum is a question of life and death to Greek credit. Also, so many supplementary credits, especially for the War Department, are constantly being asked for and granted, that without the accounts of the actual sums paid out of the Exchequer, it is impossible to form a correct idea of the amount really expended.

I believe that the expenses of the War Department might with advantage be very considerably reduced. The principal abuse to be complained of is the maintenance on full pay of a comparatively vast number of officers, commissioned and non-commissioned, out of all proportion to the troops they are supposed to command. Only on the 22nd of this month (November, 1864), the number of the military force as sanctioned by the Assembly amounted to 12,045 men. I am at a loss to conceive what can be the object of this number of troops, which, numerous as they are for a

country in the situation of Greece, have been hitherto utterly unable to suppress the brigandage by which her continental provinces are annually desolated. Greece is powerless for purposes of aggression, and her independence is guaranteed by three powerful protectors; under these circumstances it appears to me that the National Guard and a well-organized body of police, backed by a small artillery force, would be all that is required for the maintenance of public order.

Statement of the Finance Minister.

On the 14th of September last, the Finance Minister presented to the National Assembly a statement containing some general information respecting the sums actually received and spent by Government up to the end of the financial year 1862, and some observations upon the probable results of 1863 and 1864.

The annexed Table shows the total amount of the revenue and expenditure of Greece during the thirty financial years from 1833 to 1862. The sums set down as received and paid on account of foreign loans and debts are based upon the loan of 60,000,000 francs to Greece in 1832. The Greek Government accounted every year the sum which they should have paid as interest and sinking fund to Messrs. Rothschild even when they in reality paid nothing, and to balance their accounts treated the advances made for them by the three guaranteeing Powers as regular items of revenue.

Setting aside the foreign receipts and expenses, we find the internal or real revenue of Greece amounting in—

	Drachmas.	£
1833	7,950,383 =	283,942
1847	11,146,645	398,094
1860	24,046,776	858,814

Considerable fluctuations are to be observed between 1833 and 1847, but after the latter year a steady progress took place until the revenue reached its highest figure in 1860, in which year it amounted to more than treble that of 1833. But in spite of this increase in the income of Greece, with the exception of the small sums paid in 1860 and 1861, no part of her new resources have been applied to the payment of her long outstanding debts. The expenditure has increased in proportion to the revenue, and exceeded it in the years 1847, 1848, 1850, 1858, and 1859, and this without any corresponding advantage to the country from the construction of roads, public works, or other elements of progress.

The result of the above Table (Inclosure No. 3), if no account be taken of the accumulating debt to the three Powers, is a nominal surplus at the end of the financial year 1862 of 5,362,365 drachmas (191,153*l.*). This surplus, however, M. Sotiropoulos explains must be reduced, owing to bad debts and other causes, to 1,251, 953 drachmas (44,712*l.*).

The accounts for the financial year 1863 are said to have been made up to the 30th of June, 1864, giving as their result up to that date—

	Drachmas.	£
Expenses	21,092,850 =	760,458
Receipts	15,788,651	563,880

M. Sotiropoulos calculates that at the end of the financial year 1863, *i. e.*, on the 31st of October, 1864, the expenditure will amount to—

	Drachmas.	£
Expenditure	21,642,850 =	772,959
Revenue	16,538,651	590,666
Deficit	5,104,199 =	182,293

The great decrease in the revenue of 1863 is accounted for by the disturbed state of the country after the revolution, and the reduction of the land tax already alluded to.

The Greek Government succeeded in borrowing 4,060,000 drachmas (145,000*l.*) to meet their liabilities, partly from a patriotic loan to which all Greeks were invited to subscribe, and partly from the National Bank; this sum, with the surplus of 1862 (if it really existed), would cover the deficit, and leave a small sum (207,754 drachmas, or 7,419*l.*) in the Treasury.

The calculations of M. Sotiropoulos for 1864 are—

	Drachmas.	£
Expenses	23,660,026 =	845,001
Receipts	23,048,685	823,167
Deficit	611,341 =	21,834

This deficit is rather more than covered by a sum of 410,017 drachmas (14,644*l.*) taken from the Treasury of the Ionian Islands, and the small surplus of 1863. On the whole, M. Sotiropoulos thinks that the revenue and expenditure will be balanced at the end of the financial year 1864—a satisfactory result, if realized, considering the vicissitudes which Greece has passed through during the last three years.

Public Debt.

It is impossible to make a statement of the actual amount of the public debt of Greece. The following is a rough sketch of its condition at the end of 1862 made by Mr. Merlin, Her Majesty's Vice-Consul at Athens, the gentleman who represents the interests of the bondholders in Greece :—

	£
1. Capital and arrears of interest on loans of 1824 and 1825	7,000,000
2. Capital and arrears of interest on the loan of 1832	5,500,000
3. Capital and arrears of interest on debt to Bavaria contracted in 1837 ..	180,000
4. Debt to National Bank of Greece	144,000
5. Internal debts recognized by the Greek Government, such as Capodistria Bank, claims of Islands of Hydra, Spezia, Psara, and sufferers by the War of Independence, &c.	1,500,000
Total	14,324,000

Considerable changes have taken place since, especially in the state of the internal debt, without vouching positively for the perfect accuracy of all the figures; I think the following information respecting the present state of the public debt of Greece is reliable :—

Loans of 1824 *and* 1825.—According to a calculation sent by the Greek Minister for Foreign Affairs to Mr. Scarlett on the 14th of January, 1864, the sum due at the end of the year 1863 to the bondholders on account of these loans, amounted, with the arrears of interest, to 6,382,175*l.*

The first loan of 800,000*l.* in 1824 was negotiated at 59 and bore interest at the rate of 5 per cent. per annum; the second loan of 1825 was 2,000,000*l.*, negotiated at 55½, also at 5 per cent. interest per annum. 300,000*l.* of the first loan and 100,000*l.* of the second loan have been re-paid from capital retained in the hands of the lenders. The balance of unpaid capital is therefore 2,400,000*l.*, and the debt to the bondholders amounted, with the arrears of interest, according to the bondholders' statement, to 7,077,625*l.* on the 2nd of July, 1864; with the exception of the 400,000*l.* stated above, Greece has paid nothing whatever upon these loans.

Loan guaranteed by Great Britain, France, and Russia in 1832.—The Greek Government paid the interest and sinking fund due annually upon this loan up to the year 1843, since then they have made only one payment, viz., 900,000 francs in 1861. In the Report of the Finance Commission in 1859, it is stated that the sum due by Greece to the three guaranteeing Powers on account of this loan amounted at the beginning of that year (1859), without the interest on the advances of the three Powers, to 56,142,304 francs, and, if no payments were made by Greece in the intervening years, would amount in 1870, when the loan should have been extinguished, to 121,528,198 francs. The Commissioners recommended also that Greece should be called upon to pay a sum of not less than 900,000 francs per annum as interest and sinking fund on this debt; this sum to increase in proportion to the increased resources of the country. The sum which the Greek Government calculate is, at this moment, due to the three guarantying Powers for their advances on account of this loan is 75,919,726 francs, and for unpaid capital 19,134,464 francs: total 95,054,190 francs = 3,802,168*l.*

The Debt to Bavaria, according to a statement supplied to me by the Greek Finance Department, consists of a capital of 2,809,077 drachmas, about 100,000*l.*, to which should be added arrears of interest since 1837.

The Internal Debt of Greece consists of :—

	Drachmas.
Sum now due on account of the debt to Capodistria Bank ..	1,000,000
National loan of 1862 and 1863	4,432,600
Debt to National Bank of Greece	3,635,744
Exchequer bills in circulation	2,500,000
Total	11,568,344 = £423,021

Besides this, there is a sum of 200,000 drachmas (7,143*l.*) paid annually to the

Islands of Hydra, Spezia, and Psara for services rendered to Greece during the war which resulted in her independence; and there are certain other inconsiderable claims of individuals on Government, the amount of which it is impossible to ascertain.

It must be observed that the debt to the National Bank of Greece is larger than stated above, because it is the holder of nearly all the Exchequer Bills, and has an interest of about 500,000 drachmas in the national loan.

Taking the estimates of the Greek Government, the public debt of Greece may be roughly stated at nearly 11,000,000*l.* sterling, the great difference between this amount and that given by Mr. Merlin being caused by the fact, that the Greek Government have not accounted for the arrears of interest on the loan of 1832, which they did not expect to be called upon to pay.

General Remarks.

The Finance Commission recommended in 1859 that the attention of the Greek Government should be seriously called to the following subjects:—The necessity of a cadastral survey of the country with the special object of preventing encroachments on the national domain; of modifying certain taxes, notably the land tax; of reforming the administration, and of the publication at the proper time of the proper accounts of the sums paid into and out of the Treasury.

I am not aware that any of these recommendations have been acted upon, with the one exception of the reduction of the land tax.

The financial situation of the country is, if anything, worse now than in 1859, but this is owing to the revolution which has supervened.

The public debt, though very little has hitherto been paid upon it, shuts out from Greece all the advantages to be derived from credit, and is no doubt a heavy burden to a country whose average revenue is only 834,000*l.*; but the resources of the country are very considerable, and might be turned to great account if capital could be employed upon them. Greece is capable of supporting a far larger population. The area of cultivated land is said to increase annually; it might be very much extended. Her agricultural produce is of the most valuable description; she possesses very considerable mineral wealth, and I believe the condition of the peasants is improving, but want of roads and proper protection to person and property are very severely felt. Greece can never be prosperous until she has succeeded in retrieving her public credit and rooting out brigandage. Hitherto she has been in the position of a man with a small income and no capital, who is unable to improve his position by investment, because nobody will lend him any money, and with numerous poor relations living at free quarters upon his scanty resources. I believe, though they would be afraid to confess it, that nearly all the landed proprietors of Continental Greece are obliged to pay black mail to the brigands, and cannot live upon their estates.

Under these circumstances progress is impossible; but were an arrangement come to with the creditors of Greece, roads made, and proper security for person and property established, colonists would be attracted, an improved system of agriculture might be introduced, advantage could be taken of the natural riches of the country, and a large addition to the national wealth, an increased exportation and reviving credit would immediately follow. Greece is now about to enter upon a new period of her history under a new dynasty and a new constitution; it is my sincere hope that increased prosperity may accompany the change in her institutions.

(Signed) ERIC FARQUHAR.

P.S.—Since writing the above the budget for the financial year 1865 has been printed, but the Assembly has separated without sanctioning it. It is, as regards Greece, the same as the budget for 1864, but contains, for the first time, the estimates for the Ionian Islands.

The receipts from the Islands are estimated at 4,805,001 drachmas (171,607*l.*); the expenses at 3,648,911 drachmas (130,318*l.*) But, as the fiscal laws by which the Islands are to be governed have not yet been passed, the above statement must be looked upon as conjectural, and affords no basis for judging whether the Ionian Islands will in future be a source of additional income or increased expenditure to Greece.

* Including 720,000 drachmas, derived from the national loan of 6,000,000.

Report by Mr. Farquhar on the Cultivation of Cotton in Greece.

Athens, November 28, 1864.

A good deal of cotton used to be grown in Greece whilst under the Turkish rule, and it is said that the first cotton spun at Manchester came from Livadia.

Since then the cultivation of cotton has diminished, and up to the year 1861 only inconsiderable quantities were produced. In that year the effect of the high prices caused by the war in America began to be felt.

At this period, besides a land tax of 10 per cent., cotton paid a duty of 1 drachma 20 leptas (11¼*d.*) per quintal (121 lbs.) on exportation. The attention of the Greek Government was attracted by the increased production, and in 1862 a law was passed abolishing the existing export duty on cotton, and at the same time substituting for the land tax a duty of 9 drachmas (6*s.* 5*d.*) per quintal of ginned cotton, and 3 drachmas (2*s.* 1½*d.*) per quintal of seed cotton; 3 lbs. of seed cotton being equal to 1 lb. of ginned cotton.

In 1862, the total production of Greece was calculated at 5,500,000 lbs. of seed cotton.

I have two statements of the production of 1863 from two totally different sources, which very nearly agree in amount.

The following estimate I believe to be as nearly as possible correct:—

Cotton grown in Greece in 1863.

	Seed Cotton. English Weight.	Ginned Cotton. English Weight.
	lbs.	lbs.
Livadia, Kalyvia, Vranesi ..	8,400,000	2,800.000
Dadi (Alalanta)	672,000	224,000
Morea	56,000	19,600
Total	9,128,000	3,043,600

The Custom-house returns of the quantities exported are completely at variance with the accounts of production which I have obtained. Those for 1863 have not yet been published, but according to a statement supplied to me by the Greek Finance Department, the quantity exported in 1863 and the first nine months of 1864 was 819,617 lbs. of ginned cotton. If 3,043,600 lbs. of ginned cotton were produced in 1863, what became of the remainder, upwards of 2,000,000 lbs.? Very little is consumed in Greece; and I am unable to account for this remarkable discrepancy, which is, however, a significant fact, and of course renders futile all calculations as to the revenue derived from cotton.

It is calculated that 100,000 stremmata of land have been sown with cotton this year (1864) in Greece. Three stremmas are equal to one English acre.

	Stremmata.
Livadia	35,000
Lamia	20,000
Thebes	15,000
Missolonghi in the Valta	5,000
The Morea	15,000
Other places, including the Islands of the Cyclades	10,000
Total	100,000

A yield of 150 okes or 412 lbs. of seed cotton per stremma is considered a very moderate estimate.

A certain quantity of the crop was destroyed by the heavy rains in September, and the accounts of the cotton crop in the Morea are unfavourable. I should think, however, that a reduction of 20 per cent. upon the production would amply cover all losses.

According to the above computation, *i.e.*, at 412 lbs. per stremma, and after deducting 20 per cent. for losses, the cotton crop of Greece for 1864 will amount to 31,500,000 lbs. of seed cotton, equal to 10,500,000 lbs. of ginned cotton, and worth at the current price on the spot of production 15,600,000 drachmas, or 557,143*l.*

I believe the above estimate to be, if anything, below the mark, and many people believe that cotton to the value of upwards of 20,000,000 drachmas (714,286*l.*) will be produced in Greece this year.

Very high prices are paid for labour during the gathering of the crop; as much as 4*s.* 3*d.* to 5*s.* has been paid this year in Livadia for a day's work.

Before the war in America the price paid in Greece for seed cotton was about 40 to 50 leptas (about 4*d.*) per oke (2¾ lbs.).

In 1863, the average price paid to the growers by the export merchants was 2 drachmas per oke of seed cotton; this year (1864) the prices have fallen, and 1 drachma 30 leptas (about 1*s.*) is the price now paid to the producers in Livadia for one oke of seed cotton.

At 50 leptas per oke of seed cotton on the spot of production, cotton is calculated to pay better than any other agricultural produce in Greece.

The most important and at the same time the most difficult point to ascertain is the approximate cost of production, for whilst the price rises and falls, this always remains nearly the same. Any attempt to fix the average cost of production per stremma can be little better than a guess. From information supplied to me I believe it to be generally about 40 drachmas (1*l.* 8*s.* 9*d.*) per stremma; but it varies very much in different localities, and according to the wages which have to be paid. In some places the local population is not sufficient for gathering the crop, and additional labourers have to be brought from a distance.

A large landed proprietor of Attica, who is now planting cotton upon a large scale upon the plain of Marathon, has supplied me with the following comparative statement of the income derived from land planted with grain and with cotton in Greece.

8½ Turkish kilogrammes are equal to 8 bushels, therefore a kilogramme may be taken to represent an English bushel.

One kilogramme of grain is required to sow an acre of land, which in a good season yields a crop of 9 kilogrammes, or 3 kilogrammes per stremma. One kilogramme per stremma must be deducted for the expenses of cultivation; 2 kilogrammes are worth 12 drachmas, but 1 drachma per kilogramme must be again deducted for the expenses of the harvest, threshing, &c.; therefore the nett return of 1 stremma of land sown with grain is 10 drachmas, or 30 drachmas (1*l.* 1*s.* 6*d.*) per acre.

Three okes (8¼*d.*) of seed are enough to sow 1 stremma of land with cotton, which yields at least 150 okes (412 lbs.) of seed cotton.

My informant takes 80 leptas* (about 7*d.*) per oke as a medium price. At 80 leptas per oke, 150 okes are worth 120 drachmas; subtracting 40 drachmas per stremma for the expenses of cultivation, gathering, &c., the result is a nett income of 80 drachmas, or 57*s.*, for every stremma of land sown with cotton, or 8*l.* 11*s.* per acre, against 1*l.* 11*s.* 6*d.* per acre for land sown with grain.

For both these statements no account is taken of the cost of the seed sown, but it is inconsiderable, and that of the grain is comparatively greater than that of the cotton.

Now that Greek cotton has found its way to the English market, it is scarcely likely that its price will fall to so low a figure as before the American war, but even were it to fall to 50 leptas per oke, the value of the produce of a stremma would be 75 drachmas, and the nett return 35 drachmas, or 1*l.* 5*s.* per stremma, equal to 3*l.* 15*s.* per acre against 1*l.* 11*s.* 6*d.* per acre for land sown with grain.

Ceylon cotton is considered the best adapted for cultivation in Greece. A small quantity of Ceylon cotton seed, sown lately for an experiment by a gentleman at Lamia, returned the extraordinary amount of 960 okes, or 2,460 lbs. of seed cotton per stremma. This was of course a very unusual occurrence; but I think that the above details show that the cultivation of cotton is likely to succeed in Greece. The only thing to be feared is the discouragement which would follow a sudden heavy fall in prices, for there is at present so little investable capital in this country, that no new enterprise can succeed which does not yield an immediate return. If the present prices last two years longer, cotton cultivation on a considerable scale will probably be established on a solid and durable footing in Greece.

(Signed) ERIC FARQUHAR.

---

* 100 leptas = 1 drachma.

Report by Mr. Lytton, Her Majesty's Secretary of Legation, on the present Condition of the Greek Kingdom and People.

Mr. Lytton to Mr. Erskine.

Sir, *Athens, January* 20, 1865.

I MUST apologize for the length of the Report upon the social, agricultural, and commercial circumstances and prospects of Greece, which (in conformity with the circular instructions of 1857 and 1860) I have now the honour to submit to your inspection, with the request that you will be so good as to transmit the same to Her Majesty's Secretary of State for Foreign Affairs.

The variety of facts stated in the last half-yearly Report by Her Majesty's late Secretary of Legation at this Court, as well as the recent date of the able and interesting Report by Mr. Farquhar upon the finances of this country, and his valuable memoir upon the growth of cotton in Greece, render it, indeed, exceedingly difficult on the present occasion to add anything of novelty to the statistical information already forwarded to Her Majesty's Government on various subjects from this Legation. I have for this reason deemed that I shall best interpret the spirit and object of the instructions above referred to, by extending as much as possible the scope and subject of my remarks, and taking a general survey of the present condition of the Greek Kingdom and people, in which I shall endeavour to embody the result of impressions that are yet vivid, rather than restrict myself to a mere recapitulation of official statistics. The very few statistical tables, therefore, which I shall venture to insert into the body of this Report, are intended merely to illustrate an argument, or justify a conclusion drawn from the comparison or examination of more detailed statistical statements, particular parts of which only are, for the sake of conciseness, therein embodied.

1.—*General Considerations.*

So far as the general well-being of a country is dependent on the proportion which exists therein between subsistence and the number of persons to be maintained by it, or, in other words, the relative amount of capital and population, there is at first sight no reason why the little Kingdom of Greece should not be exceedingly prosperous. For the population of this country is small, whilst the productive resources and commercial advantages of it are undoubtedly considerable. So that it does not seem unreasonable to expect that, under ordinarily favourable circumstances, the progress of individual and national well-being in Greece might be, though on a smaller scale, scarcely less rapid than it has been for many years in the United States of America, where capital, though small in comparison with that of many other countries, is large in proportion to population.

In this country, however, capital has yet to be evoked by the industry of man, from the sources which have been provided for it by the liberality of nature. Neither the ingenuity of Greek politicians (which is great), nor the authority of Greek Constitutions (which is emphatic) has hitherto been able to extract national wealth from harvests that cannot be brought to market, forest lands that cannot be safely approached, mineral deposits yet unworked, fertility of soil without cultivation, cultivation without intelligence, or scientific appliances, property without industry, industry without skill or security, an urban population absorbed in political intrigue, and a rural population infested by brigands.

The deficiency of capital, therefore, keeping place with the paucity of population, the few inhabitants of Greece are not by any means in so thriving a condition as that in which there is reason to believe that the resources of the country, if fully developed and utililized, would suffice to maintain double their number. Both capital and population pine under conditions equally hostile to each; and we may feel sure that whatever increases the one will augment the other. For many of the difficulties with which Greece has yet to struggle would find no means of existence in a well populated country.

2.—*Population and Nationality.*

The small territory of Attica, alone, appears in the days of Pericles to have numbered, certainly more than 400,000, and possibly more than 500,000 inhabitants. Every inch of its soil must have then been most carefully cultivated. Not longer

ago, however, than the year 1836, the population of this province did not exceed 23,300; and at this day the whole population of Greece (exclusive of the Ionian Islands) is hardly more than a million.* Writers of acknowledged authority have estimated the total number of the Hellenic race, when the Greeks first took up arms against the Ottoman dominion, at about 3,500,000. Now, if this estimate be accurate, and if the same proportions have been maintained by the relative increase during the subsequent years, we must place on record the significant fact, that thirty-three years after the establishment of Greek independence, more than two-thirds of the Greek race continue to remain aliens and absentees from that Constitutional Kingdom, which represents the result of their latest aspirations on the site sacred to their earliest and loftiest traditions.

The extent and character of the soil, over which are distributed the 1,096,810 inhabitants of the Kingdom of Greece, will furnish subject for remark in a subsequent portion of this Report. Of these 1,096,810 inhabitants the nationality is mixed. The Albanian race now occupies a considerable portion of the soil of ancient Greece, both within, as well as without, the frontiers of the new kingdom. With the exception of the two capital towns (Athens and Megara), it monopolizes the whole of Attica and Megarès. It is in possession of the greater part of Bœotia, and a small part of Locris. The south of Eubœa, the north of Andros, part of Egina, and the whole of Salamis are peopled by Albanians. In the Peloponnesus this Albanian element it even yet stronger. It occupies the whole of Corinthia and Argolis, the north of Arcadia, the east of Achaia; and stretching in Laconia, down the slopes of Taygetus towards the plain of Helos, it crosses the Eurotas, and holds possession of a large district round Monemvasia. In the Kingdom of Greece (where it numbers about 200,000 souls) its numerical strength is even less noteworthy than the superiority in social activity and command. It furnishes to the Greek soil the greatest number of cultivators, and to the maritime population of Greece its most enterprising element. "Within the greater part of the limits occupied by the Albanians at the present day," says one of the most distinguished historians of the Greek independence, "the Greeks have been as completely expelled as the Celtic race by the Saxon.†

Whilst, upon the sacred soil of Greece itself, the possession of the land is successfully disputed by the Albanian with the Greek, it is notorious that a considerable amount of capital is in Greek hands throughout the Levant, that there exists in almost every great commercial city of Europe a thriving Greek mercantile community, and that no inconsiderable number of Orthodox Greeks continue to this day to pursue their personal interests and extend their private fortunes within the dominions, many of them, indeed, in the employ of the Mahometan Sultan.

The still backward condition of this country, therefore, and the superior activity of the Albanian as contrasted with the Hellenic element of its population, must not be ascribed to any inherent defect in the Greek character, which, under more favourable conditions elsewhere, evinces a high order of practical intelligence, great intellectual acuteness and pliability, no lack of energy, and an innate aptitude for the acquisition of wealth by mercantile enterprize.

3.—*Social Features.*

That the national wealth of a country depends less upon the natural resources of it than upon the permanent security afforded by social or governmental guarantees to the investment of capital in the employment of productive industry, is an axiom strikingly illustrated by the present condition of Greece. In this country the general insecurity of property and labour is still so great as to drive into emigration that portion of private fortune from the investment of which national wealth is created. Population increases slowly and society makes but lame progress in Greece towards that formation and cohesion of classes which distinguishes a people from a mere population, because no Greek Government has yet succeeded either in retaining, by the establishment of security at home, the wealth and industry of its own subjects, or attracting, by the restoration of credit abroad, that portion of the wealth and industrial enterprize of other countries which is in search of foreign investment.‡ Under circumstances such as these, it is not

* 1,096,810 according to the Census of 1861.

† History of the Greek Revolution, by George Finlay, LL.D., vol. i, p. .

‡ "The immigration of foreigners has been remarkably small."—Mr. Strong (former Bavarian Consul in Greece) in 1840.

surprising that the youth of this country, which is thereby deprived of those sources of private income, and those independent occupations that are elsewhere to be found in the various branches of business opened by capital to industry, education, and intelligence should, as it does, look for both employment and maintenance at the public expense through the patronage of some political chief.

In this way the public income is clogged by unworthy claims, or squandered amongst the rabble of rival parties, whilst an undue proportion of the more or less educated part of the population is annually withdrawn from productive employment.

So long as the social development of Greece continues to be cramped and maimed by these disadvantageous conditions, we must expect that men in the upper ranks of society will be prompted to political activity, less on behalf of the representation of national, than for the advancement of personal interests; that the means of private fortune, in short, will be sought in public life; that the suffrage will be exercised by the elector chiefly in his capacity as the hungry and unscrupulous client of some powerful patron; that political support will continue to be purchased by the partial distribution of official favours, and political life continue to represent a struggle rather for places than for principles; throughout which members of a salaried Legislature will rival each other in the endeavour to secure for themselves and their adherents the largest share of the public spoil.

Meanwhile, in the lower ranks of life, as no moral or intellectual test, no competitive ordeal of any kind is imposed by the Government upon the numerous candidates for subordinate official employment, unblemished character and special capacity will not always be the qualifications most necessary to obtain it. Small posts in the gift of Government are numerous, but the demand for them is great; they are ill-paid and insecure. We should too highly estimate the average virtue of human nature, were we to expect that men, who endeavour to support not only themselves but their families on no other ostensible resources than those supplied by the precarious tenure of some small office under Government will be disposed to take a very exalted view of the moralities which belong to a position of such sore temptation.

Those whose delicate task it is to rule a race which is not their own are prone, perhaps, to attribute too readily to national characteristics the results of administrative defects. But the state of things which I have described must, I am persuaded, be attributed, not to any tendencies inherent to the character of the Greek race (which is remarkable, indeed, for its spirit of independence), but to the action of circumstances incidental to a passing phase of imperfect social and political development. The injurious conditions which still restrict the full realization of all that is valuable in the moral as well as physical capabilities of Greece, are undoubtedly amenable to reform, and of a kind that can be removed in the course of time either by the wit of man or the wisdom of nature. They will disappear in proportion as the growing consolidation of society gives greater scope and security to the natural activity of those agencies by which society is enriched, and furnishes the whole community with increasing incentives to the maintenance of order by increased facilities for the acquisition of wealth.

To accelerate or retard this growth of the whole social organism is in the power of Government. By breaking resolutely with all the administrative traditions of the last thirty years, by appealing to the best, rather than the worst, instincts of a people singularly susceptible to all noble and generous emotions, it cannot be doubted that the same admirable qualities which enabled the Greek people to achieve their independence in the teeth of terrible odds, might be again concentrated with surprising unanimity in aid of the removal of all that still impedes the progress of this young State.

One of the first objects of legislation, therefore, should now be, I think, to develop and confirm the materials for good municipal Government which already exist in the ancient communal institutions of Greece.

4.—*Communal Institutions.*

These institutions, possibly of Roman origin, have existed in Greece from a remote period of time. Their existence is in close connection with the habits, wants, and capacities of the people. Their system of operation, therefore, does not need to be taught and learned, but only to be expanded and strengthened. During the most oppressive periods of the Ottoman rule they were converted more or less into

engines for financial extortion, but they nevertheless had sufficient vitality to retain much of their original independence, and they continued to the last to mitigate in some degree the results of the fiscal rapacity that employed them. Throughout the revolutionary war they were often the means of enabling the Greeks to rally their strength and concentrate and refresh their opposition to the power of the Sultan. Their hardihood and tenacity of self-action embarrassed the projects and exasperated the ambition of Capodistria, who sought to stifle their existence by absorbing it into the central administration. He converted the local magistrates into agents of the executive authority dependent on the Minister of the Interior, and submitted the election of these functionaries to the control of a Commission named by Government.

By this means he prepared the way for the complete nullification of Municipal Government by the Bavarian Dynasty. The Regency withdrew from the people the right of electing their Demarchs by direct suffrage, to place it in the hands of an electoral college empowered to select those candidates for the office of Demarch, of whom one was then approved and appointed by the Crown. This functionary, when elected, was still liable to be suspended by the Minister of the Interior, and a mere Government agent was thus foisted upon the Municipalities in the disguise of a popular officer. The new Constitution, whatever may be its defects, has undoubtedly conferred a benefit upon Greece, by abolishing the obvious anomaly of a system which withheld the right to elect their Municipal Magistrates from a people entrusted, nevertheless, with the right of direct and universal suffrage for the election of their political representatives. The old objectionable system, however, which enables the agents of the central authority to impede the action and impoverish the practical utility of the local Magistracies is still, unhappily, in force. The effects of such a system upon agriculture and industry are so injurious and so inevitable that, so long as the cause of them continues to exist, it will require, on the part of the Crown, or its chief Minister, to mitigate even the least of the many mischiefs they occasion, a degree of vigilance in detecting and promptitude in counteracting the blunders or vices of the provincial agents of centralized power greater than can be reasonably expected, however urgently it may be needed. The only tangible arguments which I find put forward in favour of this ill-assorted union between central and local administration are generally to the effect that the local magistrate, being charged with the performance of various duties which concern the entire commonwealth, such as the recruitment of soldiers, &c., it is necessary that his conduct should be subject to the control of that authority which is alone responsible for the common welfare; and that, moreover, as the chief Municipal Magistrate is the tenant of an honorary office, if a portion of his functions were transferred to special agents temporarily commissioned by Government, the expenses of the State would be needlessly increased. The ground of this argument is, in my humble opinion, utterly untenable. Facts of daily occurrence conclusively prove that the present system is as burthensome to the whole commonwealth as it is vexatious to the communes; that it checks industry, stunts agriculture, thwarts improvement, and impedes the progress of that national wealth from which the public revenue must be raised; whilst by extending the responsibility beyond the practical power of Government, it fosters as well as justifies popular discontent.

The whole of Greece is divided into ten Nomarchies, or Prefectures; these ten Nomarchies represent thirty-five Eparchies, or Sub-prefectures; and these Eparchies are each, again, made up of Demarchies, or Communes, to one of which every member of the State must belong for himself and family. These Communes are distributed into three classes :—

Class 1,	containing a population of	10,000	and upwards.
2	„	„	from 2,000 to 10,000.
3	„	„	less than 2,000.

Every town or village numbering 300 inhabitants and upwards can claim to be constituted into a distinct Commune, or *Δήμος*. Towns or villages of which the population falls in amount under this figure belong to the nearest Commune in their vicinity. The number of Demoi in Greece is,—

Of the 1st class	7
„ 2nd class	217
„ 3rd class	56
	280

Each Demos has a Communal Council composed of eighteen members, if in the first class, twelve members if in the second class, and six members if in the third. Every Demos is presided over by a Demarch, or Mayor, whose office is nominally honourary, but who, nevertheless, receives from the Commune certain funds for the payment of persons whom he employs, as well as extraordinary personal remuneration under various heads. Every Commune is provided,—

If of the 1st class, with 6 assessors or aldermen (Παρέδροι).
„ 2nd „ 4 „ „ „
„ 3rd „ 1 „ „ „

And where there is no Mayor a special assessor is appointed. The rights and privileges of a member of a Commune are acquired by birth, by marriage, by residence, or by settlement. They consist of the right of free domicile, parish assistance in case of proved indigency, participation in the benefits of municipal property, &c. It is the obligation of every member of a Commune to contribute his quota towards defraying its collective expenses. The corporative privileges of a Commune exist chiefly in the inviolability of municipal property, the right to contract loans, levy local taxes, and elect (by universal suffrage and ballot*) the communal magistrates. The corporative obligations are, the payment of Government taxes upon municipal property, the remuneration of its own officials, as well as an indemnification to the Mayor for the expenses of his official position, the support of elementary schools, the expenses of elections, the repairs and maintenance of public buildings, roads, bridges, wells, &c.

The income of the Communes, apart from the interest on municipal property, is derived from indirect imposts on consumption, road and bridge tolls, and the lease of public places. When these sources of income fall short of the expenses the magistracy is empowered to levy direct taxes. The authorities of the Commune are, moreover, empowered by law, when the occasion is urgent, to require personal service, manual labour, and the use of oxen, horses, waggons, &c., for the construction and repair of public works. With all these "appliances and means to boot," there are not yet a dozen roads in Greece. Indeed, there are more millions sterling in the public debt than there are roads in the country. The Demarch is a municipal officer; the Nomarch and Eparch are Government officials. The budget of the Demarchy is under the supervision and control of the Nomarch, from whose decision or interference there is, in the most favoured cases even, no appeal but to the Minister of the Interior. But the Minister of the Interior appoints the Nomarch, and the Nomarch is, therefore, the creature of the Minister of the Interior. Consequently the appeal is only from the client to the patron, from the instrument to the hand that moves it. *Valeat quantum!* The result of this arrangement is, that the Communes are often compelled to support, against their will as well as their judgment, the parasites of the central Power, that local interests are sacrificed to political tactics, and funds required for the construction of roads, the improvement of agriculture, the protection of property, &c., are worse than wasted upon the unremunerative remuneration of useless officials. Reforms and economies proposed by the Demarchy may be rejected by the Nomarch. Commands imposed by the Nomarch must be obeyed by the Demarchy, in any case, until the result of a tedious and doubtful appeal to the central authority has been tried. The Demarch is elected by the universal suffrage of the Commune, but may be suspended from office by the simple verdict of the Minister of the Interior.† A step, however, has been made in the right direction, which by and by may lead to better things. The candidates for popular election in the Municipalities will probably be a superior and more independent class of men than the mere nominees of the Crown whom they are destined to replace. And, indeed, the just and growing discontent of the Municipalities with that dependence in which they are now placed upon the executive of the hour, may, possibly, before long, extort from Government or Legislation some comprehensive change in the present system.

* A purely nominal restriction is imposed on the suffrage by the Constitution, which stipulates that the elector must be possessed of *some* property either *real* or *personal*, the *amount* of which is not stated. Of course, therefore, any man who wears a hat is entitled to the suffrage.

† He is elected for three years.

There are at present in Greece—

7	mayors	of the	1st class,	receiving	from	1,500	to 2,000	drachmas per annum.
217	„	„	2nd class	„		600	1,500	„ „
56	„	„	3rd class	„		200	600	„ „

N.B.—2,000 drachmas is not quite 72*l.*

280 mayors .	840 communal functionaries receiving remunerations.
280 collectors .	
280 secretaries .	
966 aldermen or assessors (Παρέδροι).	
3,065 members of Communal Councils.	
Total . 4,872 not comprising "special assessors," whose number it is difficult to ascertain.	

Allowing for "secondary employés" who receive pay, but the number of whom cannot be exactly estimated, we may safely assume the whole number of persons employed by, or on behalf of, the Municipalities to be not less than 5,000.

The subject of Municipal Government in Greece, is one which demands more careful and detailed examination than is compatible with either the limits or the character of this Report. I pass from the consideration of it, merely venturing to express the belief that the social and industrial, as well as political, development of Greece would be more effectually advanced by the practical recognition, and judicious extension, of the rights of the Greek citizen in his civic and corporative capacity as a member of a municipality, than they have hitherto been by any rhetorical assertion in constitutional instruments of those rights, solely considered in their abstract relation to his existence in the State as a human unit.

5.—*Education.*

Education in Greece has certainly been making progress which deserves to be noticed, although I cannot attempt, in the course of a sketch so general, and so restricted to outlines as the present, to give a full and complete picture of the results achieved by this agent of civilization, the activity of which, like that of all others in this country, is chiefly checked by the want of funds. When the population of those provinces which now constitute the Kingdom of Greece, first succeeded in emancipating itself from the dominion of the Sultan, no public provision existed for the education of the people. The country was exhausted and disorganized by a long and virulent struggle, passions which only slowly subside in the bosom of a people who had been roused and indulged to the utmost, the routine of daily labour was troubled by the echoes of the camp, and the traditions and pursuits of martial life were more popular than the unfamiliar avocations of peace.

Within the period of time which has since then elapsed—a period not longer than that which is allotted to the life of a single generation—valuable reservoirs of instruction have been established, and channels opened for the diffusion of knowledge, which, in the present state of population, require rather to be enriched than multiplied. So that on the whole, if we fairly estimate the great disadvantages with which it has had to contend, education will seem to have made greater progress in Greece, than the comparative development of the country in some other important respects would have encouraged us to anticipate.

This is chiefly due to the instinctive appreciation which the Greeks have ever evinced, even during the most barbarous and disastrous periods of their history, if not, indeed, for education strictly so-called, yet certainly for literature and mental culture. Something of this is also due, perhaps, to the tolerant spirit of the Greek Church in matters of religious profession, to its independence of any foreign Ecclesiastical Power, and to the fact, that the headship of it being vested in the King, it is more easily kept in control by the State. It must be admitted that nearly all that has yet been done in Greece for the promotion of education has been effected under the Bavarian Dynasty; less, however, by the initiative action of Government, than by popular enthusiasm and private subscription.

The Presidency of Capodistria professed, indeed, to promote public instruction; but its mode of doing so was defective, inconsequent, badly carried out. By annulling the independent action of the municipalities, moreover, Capodistria deprived the country of the best and cheapest mechanism for the diffusion of elementary instruction. What is more important, the moral education of the whole country was suspended and retarded by a policy which accustomed the people to look only to Government for the performance of duties, which it behoves the citizens of a free State to perform for themselves.

Thus, when the Monarchy was established, it found in Greece little or nothing of importance in the way of educational institutions, beyond the Orphan Asylum at Egina (subsequently removed to Nauplia), which was founded upon a mistaken and insufficient basis, and has never enjoyed a very robust existence. The number of young Greeks educated in foreign countries, it is, of course, impossible to ascertain; but it is probably very great. There are now established in Greece, besides the University of Athens, which I will presently refer to more particularly, 8 gymnasiums, or Royal colleges employing 50 professors, and providing instruction for 1,124 students.

The number of these establishments has doubled since 1840. There are 80 Hellenic schools, comprising 142 masters and 5,342 pupils. Of these schools 26 new ones have been established since 1840:—4 ecclesiastical schools, with 4 masters and 184 pupils; 1 superior ecclesiastical school, with 10 professors and 36 pupils; various private boys' schools, employing 58 masters on behalf of 711 pupils; and Hellenic girls' schools which provide for 900 girls. Besides these there is a normal primary school, with 8 masters and 145 pupils. Then come the commercial schools, of which the public foundations employ, altogether, 454 masters, with 76 mistresses, and provide instruction for 42,353 pupils; whilst the private communal schools comprise amongst them, 42 masters and mistresses, and 2,880 pupils. Finally, there are 300 irregular elementary schools attended by 10,000 pupils. If to this number of pupils, for whom instruction of various kinds is provided in Greece, we add the students of the University of Athens, the total will be 64,455, which is greater than that of the whole number of persons of both sexes under the age of 20 in the year 1840.

The chief impediment to the diffusion of knowledge in Greece exists rather in the poverty of the communes, than in the apathy of parents; who, however illiterate they may be themselves, value and desire instruction for their offspring. Besides the regular elementary schools, there exist among the poorer communes rudimental schools, generally kept by the parish priest; a personage, however, whose own education appears to be of so rudimental a description that it is said that he is, in some instances, incompetent to give instruction in reading and writing.

At the primary schools, reading, writing, sacred history, and religious doctrine are taught. The establishment and support of these schools is obligatory on the communes, but some of the poorer ones are assisted by the State in fulfilling this obligation. The course of instruction provided by the Hellenic schools, includes history, geography, caligraphy, arithmetic, the rudiments of ancient Greek, natural history, and occasionally French and Latin. These schools are supported partly by the State, partly by the communes, and partly by private legacies.

At the gymnasia, classic literature is taught, modern languages, the higher branches of physics, and mathematics, as well as natural history. The establishments are provided with books, &c., partly by the State, and partly by the communes. They are subject to the periodical inspection of a visiting Commission. Public lectures upon chemistry, experimental physics, and the fine arts are given at the Polytechnic School at Athens.

M. Frearitis, as Rector of the Athenian University, announces that this institution has, during the year 1863-64, employed 65 professors, and been attended by 1,080 students; of whom only 852 were Greek subjects, the remainder being from the Greek provinces of Turkey. In this total of 1,080, the faculties are represented in the following proportions:—

Theology	28
Law	625
Philosophy (Letters)	193
Medicine	216
School of Pharmacy	28
Total	1,080

During the same year the number of students who received diplomas was:—

Theology	3
Law	12
Medicine	12
Philosophy	10
Total	37

Of whom 17 only were Greek subjects. The number of Bursers amounted to 104; of whom 80 were maintained upon the proceeds of sundry special legacies,

14 out of the common funds of the University, and 20 at the charge of Government. At the expiration of this year 1863-64, the number of patients who had been received and treated in the clinical wards of the Pharmaceutic School, attached to the Faculty of Medicine, was 2,416. Of these 1,790 were cured, 179 sent to the hospital, 372 went away uncured, and 85 died. The University of Athens is the result of private subscriptions, chiefly from Greeks resident in foreign countries.

A full account of the state of education in this country, and of the system adopted in the training, and infant schools, with adequate notice of the American Missionary Schools at Athens, and the learned and literary societies of Greece would occupy a long report, specially devoted to these subjects, and is incompatible with the object and character of the present remarks.

The same may be said in respect of the administration of justice in Greece, a subject which, as it cannot in this place be properly examined, I shall venture to reserve altogether for consideration on some future occasion. It will suffice to say that, so far as I can ascertain, it is the general opinion of those who have studied them, that the civil and criminal code and the forms of legal procedure, adopted in this country partly from the French and partly from the Bavarian systems, are exceedingly good, and being devised with great sagacity upon sound principles, require little, if any modification in theory, although greatly needing indeed in practice to be more strictly enforced, and rendered more generally available for the defence of personal freedom and the protection of private property. As regards the general results of public instruction throughout Greece, they must be considered in connection with all that has already been described of the present social condition of the country. It is but a partial benefit to provide instruction for youth, if life itself is left without the occasion or the means of those occupations in which instruction may be profitably employed, and by which character is permanently developed. All that we know of Florentine society under the Medici is a proof that high culture, great erudition, and refined taste may co-exist with social depravity, political servility, and moral decrepitude. Whilst the German States of the present day present to view the apparent anomaly of the vastest accumulation of knowledge, combined with an intellectual speculation so vigorous and so independent as to have placed the master minds of Germany in the furthest vanguard of modern thought, existing (in the midst of a society wherein education is divorced from practical life) isolated and disarmed, and virtually dissevered from the destinies of a population whose political life halts undeveloped and unguided beneath the burthen of the greatest amount of class pretension that has survived the middle ages, and probably the greatest amount of ignorance that can be found in the upper ranks of any great European community.

It seems almost like a mockery to instruct the *Græculus esuriens* of Athens in experimental physics and agricultural chemistry, whilst the rural population of Greece, unprotected from the periodical raids of mountain robbers, remains so ignorant of the humble science of woodcraft that the finest forest lands in Greece are gradually being demolished by the reckless incursions of the wandering shepherd, who, when the young trees have lifted their lowest branches above the reach of his kids and goats, sets fire to the woodlands merely to pasture his flocks upon what they can pick from the ruins of it. Possessed of some of the finest forest tracts in Europe, Greece imports wood to the value of 2,298,316 drachmas, and exports it only to the value of 67,532 drachmas.

At present the number of civil employés actually receiving pay from those who administer the public purse for the time being, is about 5,000. If to these we add the probable number of officials who have already had their "innings," and are now temporarily "fielding out," as well as the number of military employés, the total number of persons composing what may be called the class of place-hunters or place-holders can hardly at the lowest be estimated at less than 15,000 or 20,000. It is probably much more. The number of lawyers practising in Greece (exclusive of course of the Ionian Islands) was 330 in 1862. It has since then tripled. So that at present one of the most remarkable results of education in Greece is the expensive luxury of 999 lawyers, and probably not less than 20,000 persons who look to Government for support.

7.—*Unsatisfactory condition of the Seven Islands. Brigandage, &c.*

The opinion which I have already ventured to express, viz. that the finest faculties of the Greek people cannot be fairly brought into play, nor the material

resources of the country adequately developed, without a radical change in the whole administrative system of the country, is certainly not contradicted by anything in the social or material condition of the Seven Islands since their annexation to Greece.

The Government of this country has had the great advantage of finding already established in the King's new possessions a compact administrative apparatus, as well as the material results of English capital, industry, and skill. It found in all the subordinate offices of the Local Government men of tried character, carefully selected, and well fitted for the performance of public duties in the school of an administrative authority which its most violent opponents have never dared to reproach with inability to maintain public order, deal public justice, and promote public works. It found in these islands property and human life secure, labour employed, excellent roads, honest tribunals, and efficient police.

The population of the Seven Islands is still what it was. The Government of the Seven Islands has been changed. The results of that change have been rapid, and are widely felt. Roads are falling into decay for want of repair.

Meanwhile, in the provinces of the Kingdom itself brigandage has revived and is increasing.

It must be admitted that it is not easy to nurse into instinctive respect for law and order a young and passionate society, barely emerged into being from a sanguinary struggle for existence maintained by means of irregular warfare; and it must be added that the sparseness of the Greek population, the mountainous and woody character of a great part of the Greek soil, the dearth of roads, and the poverty and impuissance of many of the Communes, are all so many physical and circumstantial obstacles to the prompt suppression of brigandage. But these obstacles are neither permanent nor insurmountable, and it can scarcely be conceived that they should long baffle the efforts of a strong Executive resolved to overcome them.

Many members of the governing classes in Greece, however, are descendants or relatives of robber chieftains, whose revolutionary exploits are still recorded with pride in songs. Young men, whose families have been menaced or injured by some act of a vindictive or unwarrantably intrusive character on the part of the Executive, finding in the conduct of the State itself the bad example of violated right, have not scrupled now and then to repel legalized oppression by illegal resistance, and "make to the mountains." It is probable that for this reason, and under the yet vivid impression of patriotic traditions, many cultivated Greeks continue to regard brigandage with a toleration which would be otherwise unaccountable; and there are few of these modern bandits who have not a friend, a relation, or a political patron in high quarters, and are not able to procure protectors near the palace by sending voters to the poll. The bands that roamed with Marco Sciara the forests of La Faggiola were certainly of a nobler order than the comrades of Kitzos and the modern Greek brigands of that stamp. But the brigandage of modern Greece, like that of mediæval Italy, may be attributed rather to social and administrative causes than to any permanent tendencies special to the character of a particular people. The Executive of a Constitutional Government, however, is only the instrument of the Legislature, which, in turn, is only the agent of public opinion. If public opinion itself is unformed, ill-organized, and careless in the choice of its representatives, neither the Legislature nor the Executive will possess the necessary and legitimate incentives to activity on behalf of the public good. There is a remarkable passage in Montesquieu which so accurately indicates a danger to which I think the modern kingdom of Greece must be exposed so long as jobbery is tolerated as a means of carrying on Government, that I cannot refrain from quoting it here:—"Il ne faut pas beaucoup de probité," he says in "L'Esprit des Lois," "pour qu'un Gouvernement monarchique, ou un Gouvernement despotique se maintienne ou se soutienne. La force des lois dans l'un, le bras du Prince, toujours levé, dans l'autre, règlent et contiennent tout. Mais dans un Etat populaire il faut un ressort de plus, qui est la vertu. Les politiques Grecs qui vivaient dans le Gouvernement populaire ne reconnaissaient d'autre force qui pût le soutenir que celle de la vertu. Ceux d'aujourd'hui ne nous parlent que de manufactures, de commerce, de finances, et de luxe même. Lorsque cette vertu cesse, l'ambition entre dans les cœurs qui peuvent la recevoir, et l'avarice entre dans tous."

It is possible that a second Pisistratus might make Greece in fifty years a flourishing and afterwards a free community. But it is impossible for the work of a second Pisistratus to be done by a second Capodistria; and, beyond question, the safety and hopes of Greece now lie in the stability and practice of Constitutional

Government. What this country owes to the existence of its limited Monarchy has been pointed out by a great thinker.*

The amount of progress yet made towards the ultimate extinction of brigandage by adequate means of intercommunication throughout the country will be mentioned in the succeeding portion of this Report. The measures at present taken by Government to protect property and maintain order consist of the organization of military expeditions against the most noted offenders, and the offer of rewards for their apprehension or destruction, of which the following is a specimen, taken verbatim from the French text of a recent Greek newspaper:—

"George I.—Considérant les Ordonnances Royales en date du 23 Janvier et du 8 Février, 1841;

"Sur la proposition de notre Ministre de l'Intérieur, nous avons ordonné, et ordonnons ce qui suit:—

"1. Les brigands Nicolas Dracos Coléténos, Jean Loulos, Evangelès Spanos, Vlactos et George Igeos, Charliotis, sont rangés dans la première catégorie de brigands; et il est accordé pour l'arrestation ou le meurtre, de chacun d'eux, une récompense de trois mille drachmes: il en est accordé deux mille à quiconque montrera efficacement le lieu de leur retraite; en tout, cinq mille drachmes.

"2. Les brigands Caryannis Philos, ou Zygoryannis, Demetrios Chanvelos, Eliè Spanos, Alexis Batzalexis, Sotirios Vlachos, de la commune d'Aleà, et Mitros Zafazanis, de la commune de Stymptalie, sont rangés dans la seconde catégorie de brigands; et il est accordé une récompense de deux mille drachmes pour l'arrestation ou le meurtre de chacun d'eux: il en est accordé mille à quiconque revèlera efficacement leur retraite; en tout trois mille drachmes.

"Le Ministre de l'Intérieur est chargé de faire publier et d'exécuter la présente Ordonnance.

"*Athènes, le* 11 *Décembre,* 1864.

(Signé) "GEORGE.

"Le Ministre de l'Intérieur,
(Signé) "COMMOUNDOUROS."

If the value of the rewards thus offered were triple what it is, I believe that measures of this character, if not backed up by others of a more active kind, would prove inadequate—

1. Because the information required can only be furnished on the spot by the rural population; and the rural districts most infested by brigandage are necessarily those which are most intimidated by daily evidence of the power of the lawless and impuissance of the law; and

2. Because the information, if given, would most probably insure to the informant prompt vengeance on the part of such of the brigand forces as remain at large, without securing to him efficient protection from Government.

As regards the other measures being now taken for the suppression of brigandage, I may mention that the existing Corps of Gendarmerie has been judged insufficient for that purpose, whilst the dispersion of the regular troops for the maintenance of public order in small detachments about the country has proved prejudicial to their discipline.

Under these circumstances the Government has recently decided to add to the corps of Gendarmerie 40 brigades, representing an addition of 400 gendarmes, with 80 brigadiers, and to increase the pay of the whole corps. This brings the gendarmerie to a total force of 2,772 men, and increases the expense of it by a difference of 22,000 drachmas a month. But the Government avers, I believe, that it is already in possession of funds, released from other credits, which will enable it to meet the increased outlay upon this particular item without any new appeal to the public purse. Isolated measures like this, however, which can scarcely be said to form part of any comprehensive or well-organized system, are obviously insufficient.

* "If, instead of struggling for the favours of the chief ruler, these selfish and sordid factions struggled for the chief place itself, they would certainly, as in Spanish America, keep the country in a state of chronic revolution and war. A despotism, not even legal, but of illegal violence, would be alternately exercised by a succession of political adventurers, and the name and forms of representation would have no effect but to prevent despotism from attaining the security by which alone its will can be mitigated or its few advantages realized."—"Considerations on Representative Government," by John Stuart Mill, ch. iv., p. 73.

8.—*Roads.*

Englishmen who remember the enthusiastic anticipations with which the establishment of a Greek Monarchy was heralded throughout the west of Europe in 1833, and especially those Englishmen who may happen to be still the creditors of Greece, must view with grief and disappointment the fact that the Constitutional Government which has now been established in this country for upwards of thirty years, and which has accumulated, up to the present moment, state liabilities of one kind or another to the amount of about eleven millions sterling, has not yet succeeded in providing the inhabitants of Greece with more than seven common roads; many of them extremely short, most of them very unsafe; all of them taken together representing only a total mileage of 180 to 200 miles at the most. The road from Nauplia to Tripolitza, indeed, because it passes by the way three or four large towns or villages, is made to figure in official statistics as three or four roads. It is, of course, however, only a simple line of highway. The short road even which unites the capital with its port,—a road which is the most frequented by traffic, and which skirts the massive remains of those celebrated long walls that once defended against the possibility of attack from a foreign enemy the whole tract of traffic between Athens and the Piræus,—is now only partially secured from highway robbers by daily and nightly patrols of mounted soldiery, whilst if the winter is unusually rainy, when the streams are swollen, a great part of it is sometimes submerged beneath the waters of the Coppessus. These roads are farmed out by Government, and yield a revenue of 44,200 drachmas yearly, to which total 1,600 drachmas are contributed by the road from Athens to the Piræus.

Railways in Greece there are none. The construction of them has been matter of talk for several years, and projects to that effect have been periodically paraded in official manifestos by the side of other promises in regard to various public works, which yet await fulfilment.

One administration after another, absorbed in the continuation of a policy too lofty in its pretensions and too personal in its details, to pay much attention to purely practical business, has abandoned this question to the rival intrigues of incapable speculators, without science and without capital. Railway companies, moreover, are regarded with some natural hostility by all that industry which is now engaged in the transit trade carried on by means of coast navigation, and the mountainous character of the greater part of Greece has been declared incompatible with railway communication. For the capital, however, the demand for at least a short line of rail to the Piræus has been renewed with urgency from year to year; and no less than twenty years have now elapsed since contractors and engineers have, in one way or another, been busied about this undertaking. The only visible result of their protracted proceedings is at present confined to the appearance of thirty or forty labourers at work for four or five hours once a week upon the Muses' Hill. It is, however, the opinion of competent judges that the soil of Greece offers no serious, certainly no insurmountable, obstacle to intercommunication by rail. Nay, that the construction of railroads throughout this country is quite possible under physical conditions far from unfavourable. At any rate, there is ample reason to believe that a railroad from Athens to the Piræus, crossing a tract of country where there is neither any great inequality of soil to be overcome, nor any property of value to be invaded, might be constructed (if the route were wisely chosen) in six months, at an expense of not more, and possibly less, than two millions of drachmas.

Whilst an enterprize so simple, inexpensive, and necessary as this continues to languish, it is, perhaps, premature to indicate the various lines which seem destined by the formation of the country, and the wants of the population, for railway traffic in Greece at some yet distant period. The day, however, may be hastened by a wise executive and reviving credit, when this country will be, as it should already be, traversed by two main trunks of rail from the Piræus to Patras, and from the frontiers to the Piræus. Of two such lines the first would communicate with the great commercial highway from Trieste to Constantinople, Smyrna, Egypt; the second, with that which conducts the commerce of the East to Malta, Italy, Marseilles. These two great arteries of internal communication, converging at the Piræus, would bring the interior of Greece into contact with the great movement of commercial interchange between east and west; and, in proportion as the activity thereby imparted to the productive forces of the country, would make themselves felt, it may be anticipated that various branch lines, connecting village with village and the whole of the interior with the sea, might from time to time be

gradually thrown out in various directions from these two great vertebral columns of a new commercial organization.

Whenever any serious effort is made to lay the foundations of railway communication in Greece, it may be hoped that the ultimate object will be kept in view, and that such short lines as may be first contructed may be so designed as to become available at some later period as component portions of a more extensive system of railroad.

Of the two main routes above indicated, the most practicable and the most immediately advantageous would probably be the first. This line, of which the rail from Athens to the port would form a small portion, appears to offer no great difficulties to construction between Patras and Corinth. It has been calculated by an experienced engineer, the result of whose survey is now before me, that between Patras and Corinth the chief works requisite for such a line would be about forty or forty-five small bridges, and about twenty or twenty-five from Corinth to Eleusis.

By a detour of two hours towards the villages of Hesaeli and Menidi, the line might be carried across the mountain range that divides the plains of Attica and Eleusis, cutting the lowest slopes of Mount Icarus without a single tunnel. This would bring it into connection with various surrounding villages which already exist in that neighbourhood; and so soon as safe and speedy communication were established with the capital, it is probable that numerous villas, hotels, and country residences, would spring up, and locomotion rapidly increase between this part of the country and Athens, the population of which town would thus be enabled, during the heavy summer heats, to enjoy without trouble or expense the healthful luxury of mountain air and sea baths.

Meanwhile, with the exception of the seven roads already mentioned, the only present means of communication with the interior of the country are furnished by the tracks of wandering cattle. Much might probably be cheaply done for the construction of good common roads by the employment of soldiers for that purpose. Something in this way was done by the French during the Greek war of independence.*

But the Greeks have not profited by the example; nor is labour congenial to a population by whom almost every second day throughout the year is kept as a public feast day or private holiday.

9.—*Agriculture.*

"Where may a man turn, that he shall find agriculture safe?"† Certainly not the modern Kingdom of Greece; where the rural population have, to say the least, greater reason to ask this question than the platonic philosopher by whom it was asked ages ago under the settled Government of the learned and virtuous Aurelius, and in one of the most peaceful periods of the world's history. All that has been already said in the foregoing sections of this report will suffice to indicate what are, in my opinion, the main causes of the backward state of agriculture in a country, the soil of which was once most highly cultivated, and is still well adapted by nature for the maintenance of a numerous and wealthy agricultural community.

The whole superficies of Greece has been estimated at 45,699,248 stremas, or about 23,801 square miles. Of these 45,699,248 stremmas, which comprise in extent the whole soil of Greece, 11,748,000 stremmas are said to be unfit for cultivation; 18,599,240 stremas consist of rock and mountain; 5,419,660 stremas consist of forest; 833,448 of marsh; and 1,653,000 of rivers, roads, cities, villages, &c. In all, therefore, there are 38,253,000 stremas of uncultivated land, leaving 7,435,900 stremas of land in cultivation which contain,

	Stremas.
Land sown	6,076,000
Land planted	1,359,900
	7,435,900

In this estimate the extent of soil represented as being generally in cultivation

* And subsequently, when the allies occupied the Piræus during the late war with Russia from 1854 to 1856, they found it a filthy and straggling village. They left there the groundwork of a fine town. The French soldiers set to work, cleared and embellished the streets, and soon converted an ugly-made space used only for shooting rubbish, and encumbered with unwholesome filth, into a handsome public garden. It has been remarked by an able writer that more was effected for the public advantage here by 2,000 French conscripts in eighteen months than had been done by the whole Greek army of 10,000 men in twenty-three years!

† "Ποῖ τις τράπηται, πούτις εὕρῃ γεωργίαν ασφαλεῖ;"—*Maximus Tyrius.*

must of course be understood as representing that portion of the land which is left to lie fallow, in some districts every two, in others every three years. The various kinds of produce from seed which the soil of Greece is capable of yielding, and the relative extent of the separate portions of that soil which are respectively occupied by the cultivation of each particular kind, are

	Stremas.
Corn	944,093
Barley	362,871
Mixed	361,825
Early crops (corn)	3,675
Rye	24,121
Oats	41,486
Buckwheat	36,988
Indian corn	512,586
Peas, beans, &c.	29,172
Millet	434
Pulse	840
Vetch	3,178
Sesame seed	1,222
Cumin (or caraway seed)	104
Tobacco	25,996
Cotton*	21,105
	2,369,696
Or 769,898⅔ acres. If to this we add, for land sown with potatoes, onions, garden produce of various kinds	1,190,304
The total extent of land actually yielding produce from seed cultivation may be stated at	3,560,000
Allowing for fallow	2,516,000
Total extent of land sown	6,076,000
Or 2,025,333⅓ acres.	

* These statistics were collected in 1862. The extent of land now cultivated for cotton is stated at the close of this section.

The total extent of soil devoted to the plantation and cultivation of vineyards, fruit-trees, &c., is made up of,

	Stremas.
Vines	492,502
Currant vines	153,058
Olives	370,000
Mulberries	75,000
Figs	18,000
Valonea	13,000
Other fruits of various kinds	238,340
	1,359,900
Or 453,300 acres.	

The whole soil of Greece, therefore, comprises in its entire extent,

	Stremas.
Land sown	3,560,000
„ fallow	2,516,000
„ planted	1,359,900
„ forest	5,419,660
„ unproductive	32,833,688
	45,699,248

Or 15,233,082⅔ acres.

The respective numbers and occupations of each class of the agricultural portion of the entire population living upon this soil, are defined in the subjoined table, according to the proportions in which they exist throughout each of the ten Nomarchies into which the whole Kingdom of Greece is administratively divided.

TABLE showing the Number of Proprietors, Farmers, Agricultural Labourers, and Shepherds in each of the ten Nomarchies of Greece.

Nomarchies.	Proprietors.	Farmers.	Shepherds.	Labourers.	Amount of Population.
Attica and Bœotia	1,622	10,525	3,050	3,721	116,024

Total			73,598,850

Or about 2,628,530*l.*

To sum up the whole result of these figures, the relative productivity and value of the various kinds of agricultural industry practical in Greece, may be thus expressed :—

(D.)—COMPARATIVE TABLE.

Kinds.	No. of stremas of Land and of live Animals.	Gross Value.	Expenses.	Net Profit.	Capital Value.	Comparative Percentage.
	stremmata	Drachmas.	Drachmas.	Drachmas.	Drachmas.

Valonea, produced from the acorn of the Levantine oak (*quercus Ægelops*), forms one of the principal exports of Greece, and is used in France, Italy, and England, for tanning leather.

Rice, opium, and madder, are also cultivated in Greece, but in such small quantities, as hardly to admit of being classified. The cultivation of the madder root, indeed, which, in Greece is of a fine quality, but which monopolises a large extent of soil, and takes four years to reach maturity, is hardly compatible with the quick profits required to enable agriculture to be carried on, as it is here, upon a small capital.

The forests of Greece produce timber of various kinds, which, if it were skilfully

cultivated, and could be expeditiously and conveniently brought to market, would be of considerable value. The principal forest trees of Greece are :—

The Italian pine (*pinus maritima*).
The white fir (*pinus abies*).
The common pine (*pinus pinea*).
The Italian oak (*quercus Esculus*).
The common oak.
The common chestnut (*castanea vesca*).
The eastern plantain (*platanus orientalis*). Good for furniture, charcoal, and basketwork.
The kermes oak (*quercus coccifera*). Producing a brilliant dye.
The rock oak (*quercus ilex*). Very durable.
The rongh elm (*ulmus suberosa*). Scarce.
The common ash (*fraxinus excelsior*).
The beech (*carpinus ostrya*).
The black elm (*ulmus glutinosa*).
The winter lime (*tilia grandifolia*).
The common cyprus (*cupressus sempervirens*).
The yew (*taxas baccata*).
The Greek poplar (*populus Græca*).
The white willow (*salix alba*).
The thorn (*acer monspessulanum*).
The yellow berry (*cellis orientalis*).
The Judas tree (*cercis siliquastrum*).
The wild olive (*olea europea*).
The laurel (*laurus nobilis*).
The pomegranate (*punica granatum*).
The breadfruit (*ceratonia siliqua*).
The wild almond (*amygdalus communis*).
The walnut (*juglans rigia*).
The wild plum, cherry, pear, arbute, &c.

There can be little doubt that the soil of Greece still abounds (as formerly) in thermal and mineral springs, from which at present no advantage is derived.

The gold mines of Laurium are no longer, as in the days of Themistocles, a source of wealth; but the soil probably still contains gold, as well as malachite, marble, lapis, jasper, chalcedony, prophyry, serpentine, obsidion, emery, slate, meershaum, coal. It is impossible to calculate the extent and possible value of all these deposits, for they are as yet all but unworked, and add nothing to the wealth of the country.

According to the very highest estimates, the net profit upon the cultivation of corn in Greece is 5 drachmas 88 leptas per strema, that is to say, about 11*s.* 9*d.* per acre. But if we take, on their own showing, the assertion of many Greek agriculturalists, the estimate must be made out to a very different result, and will stand thus :—

Expenses.

	Dr.	leptas.
Value of one strema of land, 50 drachmas. Interest upon capital at 12 per cent.	6	0
Interest and sinking fund for redemption of capital in oxen	1	50
Interest of second year when land lies fallow	6	0
Expense of two ploughings	5	50
„ 12 okes of seed	3	50
Interest thereon	0	42
Expense of reaping	2	0
„ thrashing, &c.	2	50
Land and communal taxes	1	75
Payment of "Rural Guards"*	0	70
Total of expenses	29	87

Profits.

	Dr.	leptas.
3 kilogrammes 12 okes at 5 drachmas 50 leptas	19	74
60 okes of straw at 5 leptas	3	0
Total profits	22	74

Result.

	Dr.	leptas.
Gain	0	0
Loss	7	13 !

In the same way the cultivation of barley is said by some to yield (per strema) :—

	Dr.	leptas.
A profit of	8	36
And by others a loss of	3	85
Mixed crops yield a profit of	4	57
Rye yields a profit of	5	99
Oats „	4	22
Buckwheat „	4	92
Indian corn, according to some yields a profit of	8	51
„ according to others „	0	78
Potatoes, a profit of	18	50
Sesame seed, according to some, profit	9	70
„ according to others, loss	5	31
Cumin seed, a profit of	24	44
Fruit-trees, &c. „	10	10
Clover „	11	0
Tobacco, according to some, a profit of	10	10
„ according to others „	38	58
Cotton, according to some „	17	30
„ according to others „	65	71

* An institution rendered necessary by the insecurity of property in rural districts.

The growth of cotton in Greece, is a subject of some importance which has been fully and ably discussed in Mr. Farquhar's interesting and recent memoir, and about which nothing further can be said in this Report. At least about 100,000 stremas of land appear to have been planted with cotton last season, from which, if the crop be good, and prices are maintained, Greece will probably receive from 20,000,000 to 30,000,000 of drachmas.

The currant crop, which, in the Morea alone is expected to yield about 47,000 tons this year, furnishes one of the largest and most valuable items of the Greek export trade; the importance of which will be fully considered in the next section of this Report relating to Commerce.

The agricultural implements and appliances of Greek husbandry at the present day, are almost as rude as they were in the time of Hesiod, whose description of the Greek plough is still accurate. Neither mechanism nor science have yet been applied to agriculture in this country. It has been already mentioned that Greece, notwithstanding her vast and valuable forests, is still obliged to buy more timber than she is yet able to sell. Travellers in Bœotia describe with admiration the immense remains of Pelasgian industry and skill which once rendered available for cultivation, an extensive tract of the finest soil in Greece, now submerged beneath the increasing waters of the Copaïc Lake. They must seem to have been left there by fate, to shame the self-complacency of present times, and deride the agricultural and industrial impuissance of every Government which has hitherto been the representative of modern civilization at Athens. The soil of Greece is broad enough to embrace at least 5,000,000 of inhabitants, and rich enough to find food for them all. Yet Greece does not produce corn sufficient for the wants of a population scarcely exceeding 1,000,000, and imports, in ordinary seasons, at least 125,000 quarters of corn from the Black Sea.

Myriads of emigrants might settle here upon a soil in many respects more richly gifted, and under a climate certain by less rigorous, than those of either America or Australia. Yet not a single sufferer from the over-crowded state of population in other countries has ever yet dreamed of emigrating to Greece. Why? Because in this country, Government has hitherto been weak as well as arbitrary, legislation unpractical, and therefore, society turbulent, and property insecure.

10.—*Commerce.*

Greek commerce, following the French system, is officially classed under two heads. All exported merchandize whether foreign or national, and all imported merchandize whether bonded or entered for consumption, is (without destruction of origin or destination) classified by Government as "general commerce." All foreign merchandize entered for consumption, after the payment of duty, and all exported merchandize, whether of Greek produce, or foreign good re-exported, is classed under a separate head, and distinguished as "special commerce."

The "general commerce" of Greece during the year 1862 (this is the date of the latest commercial statistics yet published by Government), reached a total value of 81,433,392 drachmas, which is equivalent to about 2,908,353*l.* This figure is less by 2,088,945 drachmas than the result of the previous commercial year, and 793,954 drachmas in excess of the four years average.

To the total value of the "general commerce" during the year 1862, as above stated, the import trade contributes 49,109,666 drachmas, or about 1,753,559*l.*; and the export trade 32,323,726 drachmas, or about 1,154,418*l.*

The importations effected in 1862, fall short both of those of the preceding year, and also of the four years' average. The exports of 1862, on the other hand, exceed those of 1861 by 432,275 drachmas; those of 1860 by 1,856,279 drachmas; those of 1859 by 4,435,479 drachmas; and those of 1858 by 3,458,541 drachmas. This result is due to an increasing movement in the export trade with Turkey chiefly, and, in a lesser degree, with the Ionian Islands, America, Belgium, Holland, Egypt, and Russia. For the exports to England, France, the Danubian Principalities, Austria, Italy, and Spain, have diminished. The articles from which this increasing value of the export trade is derived, are skins, figs, currants, oil, as well as cereals destined for the Ionian Islands; an item which cannot of course be counted for the present year.

The "special commerce" of Greece, separately considered for the year 1862, represents importation at a value of 44,128,473 drachmas, or about 1,576,016*l.*, and exportation at a value of 28,027,648 drachmas, or about 1,000,987*l.*, amounting altogether to 72,156,121 drachmas, or about 2,577,004*l.*

This total is inferior to the value at which "special commerce" figures in the commercial result of the preceding year, but superior by more than a 1,000,000 drachmas to that of the four years' average.

The "special imports" for 1862 are inferior in value, both to those of the preceding year and to the figure of the four years' average.

The "special exports" of 1862 are superior to those of all the preceding years, and the value of them is 2,256,188 drachmas in excess of the four years' average.

The principal items of Greek export are currants, corn, cotton, cheese, figs, honey, lemons, oil, skins, salt, raw silk, seeds, sponges, tobacco, vermillion, wool, wine. Madder is also exported from Greece.

The import duty on tobacco has recently been reduced from 60 leptas per oke to 30 leptas on the same quantity, whether in leaf or cut. This has been done, I presume, with a view to increase the import by enabling tobacco, if shipped to Greece, and thence re-exported to Turkey, to evade the heavy duty of 12 piastres per oke levied upon it in the latter country. I understand that tobacco which has been sent in the first instance to Syra, and has there paid the nominal duty of 30 leptas (about 2½*d.*) per oke, can, when re-exported to some Turkish port, be there bought out of bond, without falling under the import to which it is submitted by the terms of the Turkish Tariff, on presentation of proof that it has been already entered for home consumption in a foreign country; and that the expense of shipping it to Syra and back is very inconsiderable. This will, probably, increase smuggling in Turkish ports, in a way which the Ottoman Government may find it difficult to counteract.

Greece imports corn, caviar, coffee, live stock, butter, flour, hides, hemp, indigo, rice, spices, saltfish, timber, spirits, soda, sugar, soap, drugs, earthenware, glassware, nails, cutlery, gunpowder, and almost all manufactured articles required for the use of its population.

The principal markets of supply to the import trade of Greece are England, France, and Turkey.

The imports from England figure at 10,518,752 drachmas, which may be stated in English money at about 37,566*l.* They constitute nearly 24 per cent. of the whole Greek import trade, and are chiefly composed of:—

	Drachmas.		Drachmas.
Cotton tissues	2,912,465	Woollen tissues	939,969
Cotton yarns	607,127	Iron (raw and worked)	780,341
Skins	1,223,822	Sugar	487,187

France follows next, with a total of 9,828,018 drachmas, or about 35,100*l.*, representing 22 per cent. of the whole import trade. The principal French imports are:—

	Drachmas.		Drachmas.
Sugar	1,959,234	Woollens	1,051,351
Skins and hides	1,649,742	Arms	427,088

The most conspicuous items of the import trade with Turkey are:—

	Drachmas.		Drachmas.
Cereals	2,299,810	Skins	795,409
Live animals	2,072,947	Salted meats and fish	419,219

And the total value of imports from Turkey is 9,170,240 drachmas; that of the imports from Austria being 7,069,716 drachmas chiefly made up of:—

	Drachmas.		Drachmas.
Wood	1,376,611	Paper	334,371
Woollens	945,539	Iron (worked and raw)	306,527

Austria takes the fourth place in the commerce of this country as a market of supply, after England, France, and Turkey.

These four Powers together contribute 36,586,710 drachmas to the value of the Greek import trade, and represent amongst them 83 per cent. of its total amount.

The Ionian Islands, not included in the official statement of the trade with England, supply the Greek market annually with imports to the value of about 1,000,000 drachmas, or from 35 to 36,000*l.* sterling.

The other countries which figure in the Greek import trade are Italy, Russia, Belgium, America, and Holland. The Danubian Principalities are made in the official statistics of the Greek Government to figure by themselves, as though they

formed no part of the Sultan's dominions, and were one of the political independencies of Europe. Greater justification, perhaps, exists for placing Egypt (so far as that is in the power of Greek statistics) in a position of absolute independence amongst the recognized members of the world's political family.

If these two markets be included as representing component factors in the value assigned to Turkish imports into Greece, we must state the sum thereof at 9,924,845 drachmas, instead of 9,170,224 drachmas.

I may mention by the way in this place, a fact which has struck me, on comparing the official statistics of the Greek import trade, with the official statistics of the exports to Greece from other countries.

The value of the imports officially identified as having been received in Greek ports is, as a rule, very considerably less than that which is assigned to the corresponding export by the official accounts of the country from which it is imported. Making all allowance for the many reasons why absolute identity in the corresponding import and export value of the same merchandize is impossible between any two countries, I cannot help attributing in some degree to the dishonesty of Greek employés, the great discrepancies here noticeable.

Amongst the markets of demand reached by the Greek export trade, England again figures at the head of the list, and is, therefore, the principal customer, as well as the principal purveyor, as regards the commerce of this country. Turkey follows next, then Austria, then France; Italy always taking the fifth place in both the import and export trade of Greece.

The principal exports to England are currants, valonea, oil, figs, &c. The total value of Greek exports to England, representing one-half of the whole Greek export trade, amounted in 1862 to 13,434,589 drachmas, or about 559,774*l.* The imports to the Ionian Islands for the same year amounted in value to 13,544,400 drachmas.

The principal items of Greek export absorbed by Turkey are hides, wine, and spirits (though prohibited by the Koran), figs, and other fruits, oil, and tobacco. Turkey figures in the Greek export trade at a value of 5,774,753 drachmas, representing 20 per cent. of the whole trade. If to this we add the value of exports to Egypt and the Principalities, the total will amount in English money to about 227,842*l.*

Austria imports from Greece to the value of upwards of 3,000,000 drachmas, France upwards of 1,000,000 drachmas, Italy somewhat under 800,000 drachmas. The exports for 1862 to France, England, Austria, Spain, Italy, and the Principalities, show a falling off, as compared with those of the previous year.

The general movement of the Greek import and export trade during the year 1862 is indicated (so far as regards only the most conspicuous items upon which the character and value of each is mainly dependent) in the following tables, which I have condensed from the more voluminous statistics of the latest official accounts.

IMPORTATION IN 1862.

The English equivalents of the Greek oke and kilo have been already stated. See Section 9.

It has already been stated that currants, which are the largest and most important product of Greek agriculture, also constituted the most active and valuable export of Greek commerce, contributing to the State a considerable annual revenue.

In regard to the capabilities of this export for revenue purposes a project has been devised, and is ably advocated by Mr. C. Tricoupi, son of the well-known Greek Historian, who was for many years Secretary to the Greek Legation in London. This project, although of a financial rather than commercial character deserves to be noticed here.

The entire quantity of currants exported by Greece (exclusive of the Ionian, Islands) was, in

1860.	1861.	1862.
Venetian lbs. 79,201,888	Venetian lbs. 72,692,166	Venetian lbs. 79,201,868

The Commercial Returns for 1863 and 1864 are, as I have said, not yet published. It has been ascertained, however, that the quantity of currants exported in 1863 was about 90,000,000 Venetian lbs., and that this export amounted in 1864, as nearly as can be yet known, to about 80,000,000 Venetian lbs. The average annual exportation of currants from the Ionian Islands is about 30,000,000 Venetian lbs. We may, therefore, estimate the whole quantity of currants annually exported from all the Greek possessions taken together, at about 110,000,000 lbs. Venice.

Now, of this entire quantity of currants about five-sevenths is consumed in England, whilst of the remaining two-sevenths one-half is taken by Germany, the other half being chiefly absorbed by Australia, Holland, and America, between them. The quantity of currants taken by France, Russia, and Belgium, and Italy is not worth mentioning.

The duties which are at present levied upon currants in the kingdom of Greece itself are, upon every 1,000 lbs. Venice, 10½ drachmas land-tax, and 2 drachmas export duty.

The export duty will be reduced on the 5th of October of this year, 1865, to 1 drachma, and will cease altogether on and after the 5th of October, 1867.

The import duties levied upon currants in those countries to which Greece exports them are,

In Austria	139	drachmas	on every 1,000 lbs.	Venice
In the Zollverein	162	„	„	„
In Belgium	130	„	„	„
In Holland	11	„	„	„
In France—If by French ship	1½	„	„	„
„ If by foreign ship	9⅜	„	„	„
In Russia—If imported by Sea of Azof or Black Sea, free of duty.				
„ If imported by the Baltic	90	„	„	„

In America the duty was reduced a few years ago from 40 per cent. *ad valorem* on 1,000 lbs. Venice to 8 per cent.; but in consequence of the war it has been again increased.

In England the import duty on currants is 7*s.* the cwt., which is equal to 91½ drachmas per 1,000 lbs. Venice, 1,000 lbs. Venice being equivalent to 9⅜ cwts.

In the year ending 31st December, 1862, the quantity of currants imported into England was 875,099 cwts.

Entered for home consumption	701,371 cwts.	= 10,991,000 lbs. Venice.
Re-exported	102,919 ,,	

Looking to the revenue derived in Greece from Customs, we find that the entire sum raised from imports of all kinds taken together was, according to the five year's average, only 3,684,914 drachmas. In 1862 it was somewhat less, viz., 3,477,120 drachmas. It is expected that the annexation of the Ionian Islands will increase the Customs revenue upon imports by about 1,000,000 drachmas annually. We may therefore estimate the aggregate income from Greek imports for next year at about 4,500,000 drachmas.

Now, if the Greek Government could obtain from the respective Governments of all those countries to which Greece exports currants the entire extinction of existing import duties upon the article of Greek produce, on condition that the movement of the import shall be restrained from inordinately exceeding its present bounds by a tax sufficient for that purpose upon the export of currants from Greece, it has been calculated by M. Tricoupi that a revenue might be raised from this one item only of the Greek export trade sufficient to enable the Greek Government to abolish altogether the whole of the present import duties upon merchandize of all kinds taken by Greece from other States.

The English import duty on currants is at the rate of 7s. on the hundredweight, which is equivalent to 91½ drachmas on 1,000 Venetian pounds. M. Tricoupi proposes that, if Greece were able to negotiate with the currant-buying countries some Convention or other arrangement of the kind suggested by him, the new tax which, in that case he would advocate, upon the exports of currants from Greece, should be fixed at half the import duty now levied upon their entry into England, that is to say, 45¾ drachmas on every 1,000 lbs. Venice.

If we set down the whole annual export of currants from Greece and the Islands at a minimum of 100,000,000 lbs. the proposed tax of 45¾ drachmas on this export would yield an annual revenue of 4,575,000 drachmas.* It has already been mentioned that the whole Customs revenue from imports does not exceed, at the most, 4,500,000 drachmas annually. Therefore, the value of the new export duty on currants would be equivalent to that of the whole of the present import revenue raised on foreign merchandize. Consequently, if this tax were in operation, all the present import duties upon foreign merchandize might be abolished altogether, not only without loss to the revenue, but with every probability that it would on the contrary, be considerably augmented by a great simplification of the fiscal system. For the reduction of the whole field of indirect taxation embraced by Customs to a single tax upon one export, in addition to the few export duties now existing, a tax on a permanent basis, easy to levy, would ensure to the State a great diminution of the expense of collection, of the number of paid officials, and of the opportunities for smuggling, whilst it would secure to the population at large, as consumers, a cheapened and increasing supply of the necessaries, as well as the luxuries of life, without injury to the interests of the currant-grower.

The advantages, indeed, which Greece herself would derive from the adoption of this plan cannot be doubted. The advantage which she, in turn, would have to offer to other countries lies in the abolition of all import duties upon foreign merchandize.

That this would increase also the value and activity of the Greek import trade, and especially as regards the imports from England, is most probable.

Mr. Tricoupi is of opinion that if the assent of England could be obtained to his proposal, that of other countries might be easily secured. He apprehends, however, that objections to it may exist in connection with our fiscal system, and particularly as regards the sugar trade. Since I began this report, moreover, I believe that the customs of Syra have been offered by the Greek Government on guarantee for the payment of the loan. This arrangement would probably render difficult, though not necessarily impossible, the adoption of the scheme which M. Tricoupi proposes and which I have here endeavoured to describe.

The number of vessels entering Greek ports from abroad in 1862 was 10,464, representing a tonnage of 1,078,507 tons. The number of vessels leaving Greek ports during the same year for foreign destinations was 11,209, with a tonnage of 1,062,111 tons.

* As it does not include the land tax, the total taxation of currants in Greece would be 56½ drachmas to the 1,000 lbs.

The coast navigation of 1862 represents, under entry, a tonnage of 1,204,293 tons; and, under departure, a tonnage of 1,189,814 tons.

Mr. Farquhar's recent report upon Greek finances renders it unnecessary for me to refer to that subject.

The Ionian Islands are not yet included in the published official statistics of the Kingdom. Since my arrival here I have been endeavouring to collect information with a view to show the relative commercial value of these Islands as an integral portion of the newly extended dominions of Greece. The statistics, however, which I have been hitherto able to collect are incomplete, nor have I yet had time to study them.

It now only remains for me to close this report with renewed apologies for the length to which it has extended. In justification thereof it will, I trust, be admitted that the subject of which it treats, lies far and wide beyond all that is contained within ordinary statistical summaries, and is pregnant with many more general considerations than those which I have ventured to indicate, rather than follow out, in the foregoing remarks.

The whole work of practical administration in this country still remains to be thoroughly re-cast, and comprehensively re-commenced. If the reigning Dynasty should ultimately succeed in the achievement of that difficult, but by no means impossible, task to which it is imperatively called by the duties of its position and the expectation of its subjects, it will undoubtedly deserve and secure the gratitude of every honest and patriotic Greek citizen, as well as the applause of Europe.

I have, &c.

OBSERVATIONS

ON THE

AGRICULTURAL STATISTICS OF IRELAND,

FOR THE YEAR 1863.

TO HIS EXCELLENCY GEORGE WILLIAM FREDERICK, EARL OF CARLISLE, K.G.,

&c., &c., &c.,

LORD LIEUTENANT-GENERAL AND GENERAL GOVERNOR OF IRELAND.

MAY IT PLEASE YOUR EXCELLENCY,

I had the honour of submitting, in August, 1863, a return showing the acreage under flax in 1862 and 1863 in each county and province, and, in September following, abstracts of the extent of land under the various crops, and the number and description of live stock in the same years. Tables exhibiting the *estimated average* produce of the crops in 1862 and 1863 in each county and province, and the number of emigrants who left Ireland in 1863, were submitted in March, 1864. I now beg to submit the more detailed Tables, which give the number and size of the holdings, the extent of land under each crop, and the number and description of live stock on the different classes of holdings in 1863, by baronies and poor law unions; also Tables showing the number and position of mills used for scutching flax in the same year.

The construction of the Tables is the same as that in former years, with the exception of Summary Tables II., IV., and VII., which give the *estimated* produce of the crops. The weights describing the yield of cereal crops and potatoes, heretofore published in "barrels" and "bushels," being changed to the hundred weight of 112 lbs. This alteration has been made in conformity with the provisions of the 25 and 26 Victoria, cap. 76, being "An Act to abolish Local and Customary Denominations of Weights, and to regulate the mode of Weighing Articles sold in Ireland."

PART I.—TILLAGE.

Extent under Tillage.

The acreage under tillage, grass, fallow, plantation,—and of bog and waste *unoccupied* in 1863, according to the Returns received—was as follows :—

Under Crops, including Meadow and Clover,	5,662,487	Acres.
„ Grass or Pasture,	9,757,518	„
„ Fallow,	39,619	„
„ Woods and Plantations,	317,134	„
„ Bog and Waste, *unoccupied*,	4,543,166	„

Compared with 1862, these figures show a decrease of 91,123 acres under crops; in grass lands, an increase of 57,286 acres; fallow, a decrease of 1,385 acres; and woods and plantations, of 211 acres. Bog and waste *unoccupied*, would *appear* to have increased by 35,433 acres. The area under the several crops in 1862 and 1863, and the proportion per cent. of each crop occupied, are given in the succeeding Table, from which it will be seen that 42·52 acres in every 100 were under cereals, being a decrease of 1·9 per cent. in 1863 compared with 1862. Green crops, including potatoes, occupied 25·81 acres in every 100 —an increase of 0·1 per cent. Flax increased by 1·2 per cent., there being 2·6 acres in

Extent under Tillage.

every 100 in 1862, and 3·8 in 1863. The proportionate area under rape was the same in both years—0·3 acres in every 100; and meadow and clover increased by 0·6 per cent.—the proportion per cent. in 1862 being 27·0, and in 1863, 27·6.

TABLE I.—The acreage under each crop in 1862 and 1863, and the increase or decrease in the latter year:—

CROPS.	1862.	1863.	1863.		CROPS.	1862.	1863.	1863.	
			Increase.	Decrease.				Increase.	Decrease.
	Acres.	Acres.	Acres.	Acres.		Acres.	Acres.	Acres.	Acres.
Wheat,	356,321	260,311	—	96,010	Parsnips,	402	360	—	42
Oats,	1,977,528	1,953,883	—	23,645	Cabbage,	30,543	34,125	3,582	—
Barley,	192,302	171,892	—	20,410	Vetches,	15,579	13,940	—	1,639
Bere,	2,910	2,730	—	180	Other Green				
Rye,	9,218	5,929	—	3,289	Crops,	11,626	17,803	6,177	—
Beans,	14,018	13,486	—	532	Flax,	150,070	214,099	64,029	—
Pease,	1,184	1,667	483	—	Rape,	15,251	15,998	747	—
Potatoes,	1,018,112	1,023,414	5,302	—	Meadow and				
Turnips,	376,715	351,436	—	25,279	Clover,	1,552,924	1,560,638	7,714	—
Mangel Wurzel,	23,114	16,320	—	6,794					
Beet Root,	108	114	6	—	Total extent				
Carrots,	5,685	4,342	—	1,343	under Crops,	5,753,610	5,662,487	—	91,123

The proportionate area under each crop in 1862 and 1863:—

CROPS.	Proportion per cent.		CROPS.	Proportion per cent.	
	1862.	1863.		1862.	1863.
	Acres.	Acres.		Acres.	Acres.
Wheat,	6·2	4·6	Carrots,	0·1	0·1
Oats,	34·4	34·5	Parsnips,	0·01	0·01
Barley,	3·3	3·0	Cabbage,	0·5	0·6
Bere,	0·1	0·1	Vetches,	0·3	0·2
Rye,	0·2	0·1	Other Green Crops,	0·2	0·3
Beans,	0·2	0·2	Flax,	2·6	3·8
Pease,	0·02	0·02	Rape,	0·3	0·3
Potatoes,	17·7	18·1	Meadow and Clover,	27·0	27·6
Turnips,	6·5	6·2			
Mangel Wurzel,	0·4	0·3	Total,	100·	100·

The fluctuations which have taken place in the acreage under the various crops from the year 1857 to 1863, inclusive, are given in the following Table.

TABE II.—The area under each crop in 1857 to 1863, inclusive:—

CROPS.	1857.	1858.	1859.	1860.	1861.	1862.	1863.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Wheat,	559,646	546,964	464,175	466,415	401,243	356,321	260,311
Oats,	1,980,934	1,981,241	1,982,662	1,966,304	1,999,160	1,977,528	1,953,883
Barley,	211,288	190,768	177,894	181,099	198,955	192,302	171,892
Bere,	6,026	5,002	3,751	3,057	3,052	2,910	2,730
Rye,	15,348	11,470	9,447	9,677	8,530	9,218	5,929
Beans,	10,631	11,038	13,315	11,234	12,451	14,018	13,486
Pease,	2,955	1,897	1,536	1,598	1,566	1,184	1,667
Total of Cereal Crops,	2,786,828	2,748,380	2,652,780	2,639,384	2,624,957	2,553,481	2,409,898
Potatoes,	1,146,647	1,159,707	1,200,347	1,172,079	1,133,504	1,018,112	1,023,414
Turnips,	350,047	338,202	322,137	318,540	334,104	376,715	351,436
Mangel Wurzel,	21,449	29,547	26,906	31,986	22,833	23,114	16,320
Other Green Crops,	73,073	76,008	69,935	69,212	67,636	63,943	70,684
Total of Green Crops,	1,591,216	1,603,464	1,619,325	1,591,817	1,558,077	1,481,884	1,461,854
Flax,	97,721	91,646	136,282	128,595	147,957	150,070	214,099
Rape,	13,460	14,067	17,107	15,825	13,339	15,251	15,998
Meadow and Clover,	1,369,892	1,424,495	1,437,111	1,594,518	1,546,206	1,552,924	1,560,638
GENERAL TOTAL OF IRELAND,	5,859,117	5,882,052	5,862,605	5,970,139	5,890,536	5,753,610	5,662,487

From the foregoing Table it appears that the greatest extent of wheat sown in any year from 1857 to 1863 was in 1857, when it amounted to 559,646 acres, from which time there has been an annual decrease to 1863, with the exception of 1860; in 1863 the extent was 260,311 acres. The largest area under oats in any year from 1857 to 1863 was in 1861, when it amounted to 1,999,160 acres. Barley, bere, and rye, taken collectively, fluctuated from 232,662 acres in 1857 to 180,551 acres in 1863—a decrease of 52,111 acres. The extent under beans and peas was 13,586 acres in 1857, from which date it varied but little to 1863, when the area was 15,153 acres. Extent under Tillage.

The largest area under potatoes in any year from 1857 to 1863 was in 1859, when it amounted to 1,200,347 acres; the least was in 1862, the area being 1,018,112 acres. The reverse of this was the case with respect to turnips, mangel-wurzel, and other green crops, taken collectively; the largest area under these crops being in 1862, when the extent amounted to 463,772 acres; and the least in 1859, when the area was but 418,978 acres.

The greatest breadth under flax from 1857 to 1863 was in the latter year, there being 214,099 acres sown; and the least in 1858, the area being only 91,646 acres. Rape varied from 13,460 acres in 1857 to 15,998 in 1863. Meadow and clover fluctuated from 1,369,892 acres in 1857 to 1,560,638 in 1863—an increase of 190,746 acres.

The following Table gives the extent under crops in each province in 1862 and 1863, and the increase or decrease in the latter year.

TABLE III.—The acreage of cereals, green crops, flax, rape, and meadow, in 1862 and 1863, and their increase or decrease by provinces and for all Ireland:—

YEARS AND CROPS.	LEINSTER.	MUNSTER.	ULSTER.	CONNAUGHT.	TOTAL.
	Acres.	Acres.	Acres.	Acres.	Acres.
1862, Cereal Crops,	719,217	577,071	935,774	321,419	2,553,481
1863, Ditto,	699,209	542,332	869,517	298,840	2,409,898
	20,008 Decrease.	34,739 Decrease.	66,257 Decrease.	22,579 Decrease.	143,583 Decrease.
1862, Green Crops,	337,035	402,310	478,859	263,680	1,481,884
1863, Ditto,	338,587	399,007	464,475	259,785	1,461,854
	1,552 Increase.	3,303 Decrease.	14,384 Decrease.	3,895 Decrease.	20,030 Decrease.
1862, Flax,	821	1,274	146,489	1,486	150,070
1863, Do.,	2,098	2,182	207,347	2,472	214,099
	1,277 Increase.	908 Increase.	60,858 Increase.	986 Increase.	64,029 Increase.
1862, Rape,	4,083	1,065	425	9,678	15,251
1863, Do.,	5,096	1,505	362	9,035	15,998
	1,013 Increase.	440 Increase.	63 Decrease.	643 Decrease.	747 Increase.
1862, Meadow,	557,334	454,820	365,861	174,969	1,552,924
1863, Do.,	561,930	459,803	363,362	175,543	1,560,638
	4,596 Increase.	4,983 Increase.	2,439 Decrease.	574 Increase.	7,714 Increase.

There has been a decrease in the extent under cereals in all the provinces in 1863 compared with 1862, amounting to 143,583 acres; in Ulster the decrease was 66,257 acres; in Munster, 34,739; in Connaught, 22,579; and in Leinster, 20,008 acres. Cereal Crops.

In green crops there was an increase in Leinster in 1863 compared with 1862 of 1,552 acres, and a decrease in all the other provinces—Ulster having decreased by 14,384 acres, Connaught by 3,895, and Munster by 3,303 acres. Green Crops.

The area under flax increased in all the provinces in 1863 compared with the previous year to the amount of 64,029 acres; in Ulster the increase was 60,858 acres; in Leinster, 1,277; in Connaught, 986 acres; and in Munster, 908 acres. Flax.

Rape shows a net increase of 747 acres, having increased in Leinster and Munster to the amount of 1,453 acres, and decreased in Ulster and Connaught by 706 acres. Rape.

In meadow and clover there was an increase in 1863 compared with 1862; in Munster, of 4,983 acres; in Leinster, of 4,596; and in Connaught, of 574 acres; and a decrease of 2,439 acres in Ulster. The net increase amounted to 7,714 acres. Meadow.

Extent under Tillage.

Flax.

The cultivation of flax in Ireland having of late years occupied much public attention, there is given in the following Table the extent sown in each year, by Counties and Provinces, from 1858 to 1863, inclusive; also the increase or decrease in each County and Province in 1863, compared with 1862. From this Table it will be seen that in Ulster there was an increase in the acreage under flax in every county in 1863, compared with 1858. Down had the greatest area in 1863, the extent being 44,963 acres, an advance of 32,697 acres. Tyrone had 32,007 acres, an increase of 16,900 acres. Londonderry, the next in point of extent sown, had 25,872 acres, an advance of 13,207 acres; in Donegal the area in 1863 was 24,132 acres; and in Armagh 24,001, being an increase of 7,652 acres in the former, and of 13,592 in the latter; the extent sown in the other counties of Ulster in 1863 was not so great, but compared with 1858, exhibits an increase. The area under flax in 1863, compared with 1858, in the Provinces of Leinster, Munster, and Connaught—varying from 887 acres in Leitrim to 4 acres in Wicklow—shows an increase in 14 Counties and a decrease in 8. There was no alteration in the county of Dublin, 1 acre having been returned in each year.

The extent of flax in 1863, compared with the previous year, was greater in *every* county, with the exception of Dublin. The counties in Ulster which increased most were Down, Antrim, Armagh, Tyrone, and Londonderry. The increase in Leinster varied from 521 acres in Louth, to 4 in Wicklow. In Munster the greatest advance was in Cork,—372 acres; and the least in Waterford,—25 acres; and in Connaught, Leitrim had the largest increase,—358 acres; and Sligo the least,—68.

TABLE IV.—The acreage under flax in each County and Province, from the year 1858 to 1863, inclusive, also the increase or decrease between 1862 and 1863.

COUNTIES.	1858.	1859.	1860.	1861.	1862.	1863.	Difference between 1862 and 1863.

Grazing Lands in 1863.

The area of each County and Province is shown in the succeeding Table; also the extent of land used for grazing in 1863, not including the area under "meadow," and its proportion to every 100 acres. The Counties are arranged according to the relative extent of pasture land in each—which varies from 60·8 per cent. in Meath, to 30·5 per cent. in Louth. The total area under grass in 1863 was 9,757,518 acres, or 48 acres in every 100 of the entire surface of the country, omitting the larger lakes, rivers, and tideways.

TABLE V.—The acreage of the several counties, and the extent and proportion under grass in 1863, exclusive of "Meadow and Clover":—

COUNTIES.	Total Area in Statute Acres.	Extent under Grazing Land.	Proportion under Grass in every 100 Acres.	COUNTIES.	Total Area in Statute Acres.	Extent under Grazing Land.	Proportion under Grass in every 100 Acres.

Number of Holdings.

The entire number of holdings in Ireland in 1862 was 609,385; and in 1863, 605,276 —being a diminution of 4,109. The holdings by classes are given in the following summary, and also the increase or decrease in each class. The increase shown in the number of holdings "not exceeding 1 acre" may be attributed to greater accuracy in enumerating small gardens and plots adjacent to cities and towns, not to any actual increase in their number.

Size of Holdings.	Number in 1862.	Number in 1863.	Increase or Decrease in 1863. Increase.	Decrease.
Not exceeding 1 Acre,	43,716	46,096	2,380	–
Above 1 and not exceeding 5 Acres,	84,463	82,451	–	2,012
" 5 " 15 "	183,031	180,145	–	2,886
" 15 " 30 "	140,218	138,540	–	1,678
" 30 " 50 "	72,342	72,050	–	292
" 50 " 100 "	54,147	54,240	93	–
" 100 " 200 "	21,698	21,934	236	–
" 200 " 500 "	8,214	8,247	33	–
Above 500 Acres,	1,556	1,573	17	–
Total,	609,385	605,276	–	4,109

The following Table exhibits the number of holdings by classes returned for each county in 1862 and 1863. In the counties of Antrim, Down, Dublin, Fermanagh, Kildare, Londonderry, Louth, Meath, Queen's, and Wicklow, there has been a small increase, and in all the other counties a small decrease.

umber and e of Holdgs.

TABLE VI.—The number of holdings, by classes, for each County and Province, in 1862 and 1863, and the increase or decrease in the latter year :—

COUNTIES.		NUMBER AND CLASSIFICATION OF HOLDINGS.									
		Not exceeding 1 Acre.	Above 1 and not exceeding 5 Acres.	Above 5 and not exceeding 15 Acres.	Above 15 and not exceeding 30 Acres.	Above 30 and not exceeding 50 Acres.	Above 50 and not exceeding 100 Acres.	Above 100 and not exceeding 200 Acres.	Above 200 and not exceeding 500 Acres.	Above 500 Acres.	TOTAL.

umber of oldings.

In order to afford further information with regard to this subject, the succeeding Table has been constructed to show *approximately* the *number of persons* holding land in

each county, and the extent in the possession of each class of landholder. The Table has been compiled from particulars obtained on special forms issued to the Enumerators, which give the names of all persons holding *more farms than one*, also the area of each farm. *The total number of landholders* according to these returns was 546,185, being a decrease of 59,091, when compared with the *number of separate holdings* as given in Table VI., the greatest decrease being in holdings from 5 to 15 acres, and in those from 15 to 30 acres. The classes of holdings increased in number by this consolidation of farms were those from "200 to 500 acres," and those above "500 acres." The results obtained in 1863 are given by Counties and Provinces in the following Table; the figures, however, must be considered only as an *approximation*, the subject being one as to which there is much difficulty. Number of Holdings.

TABLE VII.—*Approximate Return* of the number of Holdings in each County and Province in 1863, classified according to the *total extent* of land held *by each* person, without reference to the Townland, Barony, County, or Province in which they are situated:—

Counties.	Number and Classification of Holdings.									
	Not exceeding 1 Acre.	Above 1 and not exceeding 5 Acres.	Above 5 and not exceeding 15 Acres.	Above 15 and not exceeding 30 Acres.	Above 30 and not exceeding 50 Acres. Total of Ireland,	44,063	72,632	159,206	123,960	64,663	49,712	20,583	8,821	2,545	546,185

The following summary shows comparatively the number of separate holdings given in Table VI., and of combined holdings, as shown in Table VII., together with the decrease in the numbers:—

	Separate Holdings.	Combined Holdings.	Decrease.
Leinster,	131,321	113,376	17,945
Munster,	125,822	110,545	15,277
Ulster,	216,464	200,416	16,048
Connaught,	131,669	121,848	9,821
Total,	605,276	546,185	59,091

The area under each crop on the several classes of holdings (each holding being considered a distinct farm), and the proportion per cent. on the total extent of land under crops in each class, is given in the succeeding Table. It will be seen that the greatest proportion of cereals was grown on farms from "5 to 15 acres," and from "15 to 30," and Extent of Tillage on the several classes of Holdings.

the least on farms "above 500 acres." Potatoes had the greatest proportion on farms from 1 to 5 acres—viz., 35·02 acres in every 100, and this crop decreased relatively as the farms increased in size—the proportion on farms above 500 acres being but 6·18 acres per cent. With respect to turnips and other green crops the reverse was the case, the greatest *proportion* being on farms above 500 acres, and the least on those from 1 to 5 acres. As in cereals, the greatest proportion of flax was grown on farms from 5 to 15 acres, and from 15 to 30 acres—the rate being 6·16 per cent. on the former, and 5·44 per cent. on the latter;—the least proportion was on farms above 500 acres—0·46 per cent. Meadow occupied a greater proportion—49·85 per cent.—on farms above 500 acres; and it gradually diminished with the size of the holdings to 14·52 per cent. on farms from 1 to 5 acres.

TABLE VIII.—The extent under each crop, and the proportion to every 100 acres *under cultivation*, on the several classes of holdings, in 1863 :—

Description of Crops.	Area under Crops on Holdings exceeding One Statute Acre.							
	Above 1 to 5 acres.	Above 5 to 15 acres.	Above 15 to 30 acres.	Above 30 to 50 acres.	Above 50 to 100 acres.	Above 100 to 200 acres.	Above 200 to 500 acres.	Above 500 acres.

Number of Holdings in 1841, 1851, and 1863.

The following Table gives the number of holdings in 1841, 1851, and 1863, in each province and in all Ireland, according to the classification of the Census Commissioners of 1841, from which it will be seen that there has been a decrease in the *total number* of holdings in 1863, compared with 1841, of 132,022, or 19·1 per cent., the greatest proportionate decrease being in the province of Munster—29·4 per cent., and the least in Ulster—13·5 per cent. In holdings above 1 to 5 acres there was a decrease of 227,985, or 73·4 per cent., the greatest decrease being in the province of Connaught, and the least in Leinster. Holdings from 5 to 15 acres diminished in number by 72,654, or 28·7 per cent., the province of Connaught having increased, and all the other provinces having decreased. The number of holdings from 15 to 30 acres increased by 59,198 or 74·6 per cent.; Connaught, Ulster, and Leinster showing an increase, and Munster a decrease. The increase in the number of holdings above 30 acres was 109,419, or 225 per cent.; all the provinces exhibiting an advance; Connaught had the greatest proportionate increase, and Leinster the least. Compared with 1851 there was a decrease in the total number of holdings, in 1863, of 11,158; Leinster, Munster, and Ulster having decreased by 17,866 holdings, and Connaught increased by 6,708.

TABLE IX.—The number of Holdings in each Province in 1841, 1851, and 1863, according to the classification used by the Census Commissioners of 1841, in which "above 30 acres" was the maximum; the increase or decrease in the numbers on each class;—and the proportion per cent. between 1841 and 1863:—

SIZE OF HOLDINGS.		Leinster.	Munster.	Ulster.	Connaught.	TOTAL.
		Number.	Number.	Number.	Number.	Number.
Above 1 to 5 Acres,	1841,	50,110	57,857	102,215	100,254	310,436

Rate per cent.,		14·4	29·4	13·5	20·9	19·1

The succeeding Table gives the acreage of Ireland, exclusive of the larger lakes, rivers, and tideways, and how the area was occupied by the several classes of landholders. Compared with 1862, the details exhibit no alterations requiring notice. The general results

show, as already stated in the early part of this report, a decrease of 91,123 acres under crops, an increase of 57,286 acres in grass-lands, a decrease of 1,385 acres in fallow, and 211 in woods and plantations, and an increase of 35,433 acres in bog and waste, unoccupied. The apparent increase in the column headed "Bog and Waste," may be attributed to the diminution of Live Stock caused by the "Hay Famine" of 1859, and the ungenial seasons of 1860, 1861, and 1862, which rendered the mountain and boggy pastures unprofitable as grazing land. It is, however, to be hoped that under more favourable circumstances these tracts will again be included among the pasture lands of the country.

Number of Holdings and Division of Land.

TABLE X.—The number of holdings by classes; the entire extent of land under each class; also the area under crops, grass, fallow, plantations, bog, and waste, in the several classes:—

CLASSIFICATION OF HOLDINGS.	No. of Holdings in each class.	Extent of Land held by each class of Landholders.	DIVISION OF LAND.

In order to embody as much as possible the entire of the information relative to these statistics, I beg to insert here the following extracts from the report which I had the honour of submitting to your Excellency in March last on the produce of the crops in the year 1863:—

Estimated Average Produce of the Crops.

"There has been a decrease in the extent of land under tillage in 1863 compared with "1862.—Cereals decreased by 143,583 acres. Potatoes increased by 5,302, and turnips "and mangel wurzel diminished by 32,073 acres. There was an increase in flax to the "large extent of 64,029 acres, and in cabbage of 3,582 acres. Meadow also increased, "there being 7,714 acres more in 1863 than in 1862.

"In the *acreable yield* there has been an increase in all the crops in 1863 compared "with 1862, with the exception of hay, in which there was a slight decrease.

"Notwithstanding the decrease in the acreage under cereals in 1863 compared with "1862, there has been, owing to the greater yield, an increase of 1,893,541 quarters in "the total produce of these crops. Potatoes produced 1,297,547 tons more in 1863 than

"1862. In turnips the increase was 390,990 tons. Mangel wurzel diminished by 36,456 tons. Cabbage increased by 85,987 tons. In the yield of flax there was a considerable increase—18,388 tons—not only in consequence of a much larger extent having been sown in 1863, but also of a greater produce per acre than in 1862. Hay produced 19,496 tons less in 1863 than in 1862, caused by a slight decrease in the average yield. These results are given in detail in the following Tables. Estimated Average Produce of Crops.

"TABLE XI.—The extent under each of the principal Crops in 1862 and 1863, and the increase or decrease in the latter year.

Crops.	Extent Cultivated in		Increase or Decrease in 1863.	
	1862.	1863.	Increase.	Decrease.
	Acres.	Acres.	Acres.	Acres.
Wheat,	356,321	260,311	.	96,010
Oats,	1,977,528	1,953,883	.	23,645
Barley,	192,302	171,892	.	20,410
Bere and Rye,	12,128	8,659	.	3,469
Potatoes,	1,018,112	1,023,414	5,302	.
Turnips,	376,715	351,436	.	25,279
Mangel Wurzel,	23,114	16,320	.	6,794
Cabbage,	30,543	34,125	3,582	.
Flax,	150,070	214,099	64,029	.
Hay,	1,552,924	1,560,638	7,714	.
Total Decrease,				94,980

"TABLE XII.—The *estimated produce* per statute acre of the principal Crops in 1862 and 1863, and the increase or decrease in 1863.

Crops.	Produce per Acre.		Increase or Decrease in 1863.	
	1862.	1863.	Increase.	Decrease.
Wheat, in Cwts.	8·1	13·5	5·4	.
Oats, „	10·3	12·8	2·5	.
Barley, „	12·4	15·9	3·5	.
Bere, „	12·3	15·8	3·5	.
Rye, „	9·3	10·6	1·3	.
Potatoes, in Tons,	2·1	3·4	1·3	.
Turnips, „	10·1	11·9	1·8	.
Mangel Wurzel, in Tons,	9.6	11·3	1·7	.
Cabbage, in Tons,	8·4	10·0	1·6	.
Flax, in Stones of 14 lbs.,	25·9	31·9	6·0	.
Hay, in Tons,	1·79	1·77	.	·02

"TABLE XIII.—The total produce of the principal Crops grown in 1862 and 1863, and the increase or decrease in the latter year.

Crops.	Estimated Produce.		Increase or Decrease in 1863.	
	1862.	1863.	Increase.	Decrease.

"In submitting the General Abstracts in September, 1863, which gave the acreage under "the different crops, I ventured to make the following remarks :—

"'The *average produce of the crops* cannot be so satisfactorily ascertained until after the general harvest has been "'gathered in; but from inquiries which I have made in many well-informed quarters, as well as from the very favourable "'accounts given by the provincial press in all parts of the country, it may be fairly estimated that the yield of the cereal "'crops in particular this year (1863) will prove above the average which has been known for many seasons in Ireland; "'and although there is a falling-off in the total acreage, yet it is confidently expected that it will be compensated by the "'abundant produce of almost all crops—the total value of which, it has been computed, will in 1863 exceed that of the "'crops of last year by several millions sterling, and approximate to *that* of some of our best years. In flax alone the "'increase in value over 1862, caused by the larger acreage of 64,029 acres, combined with the abundant yield and superior "'quality, will, it is estimated, amount to £1,000,000.'"

"These observations, it is very satisfactory to state, have been fully realized by the "actual increase in the yield of nearly all the crops, especially in that of flax, as exhibited "in the foregoing Tables.

"METEOROLOGICAL OBSERVATIONS.

"I beg to subjoin an abstract of the Meteorological Observations for the year 1863, "taken at the Ordnance Survey Office, Phœnix Park, Dublin, for which I am indebted "to Captain Wilkinson, R.E. The mean temperature of the thermometer, according to "this abstract, was 49°·8 being 1°·3 higher than in 1862. The highest reading of the "barometer, corrected and reduced to 32° Fahrenheit, was 30·443 on February 13th, at Meteorological Observations.

Meteorological Observations.

"9.30, A.M.; the lowest reading was 28·638 on October 29th, at 9.30 A.M., wind S.W. The "highest temperature in the air during the year was 80°·4 on July 11th, and the lowest "26°·0 on the 12th of February; the highest in 1862 was 73°·9 on the 27th of August, and "the lowest 19°·9 on the 3rd of March. Rain fell on 212 days, being nearly 7 months of "rainy days; the greatest rain-fall in 24 hours was 1·305 inches on the 26th of August, "with the wind from the S.W. The prevailing wind was from the S.W., from which "quarter it blew on 117 days. The strongest winds were on the 29th and 31st of October, "the pressure being 25 lbs. to the square foot. The mean number of days in each month "the sky was overcast with cloud was 14.

PART II.—STOCK.

Number of Live Stock.

The number and ages of each description of live stock in 1862 and 1863 are shown comparatively in the following Table, from which it will be seen that there has been a diminution in every description of live stock in 1863, compared with 1862, with the exception of mules, which exhibit a slight increase. The number of horses decreased by 22,916, and asses by 3,643. The decrease in cattle amounted to 110,659. The number of sheep diminished by 147,928; and pigs to the number of 86,866. The number of goats was 9,284 less in 1862 than 1863; and of poultry 267,512. The increase in the number of mules was 298.

TABLE XVII.—The number and ages of the Live Stock in Ireland, in 1862 and 1863, and the Increase or Decrease in each description :—

DESCRIPTION OF STOCK.	Number in 1862.	Number in 1863.	Increase in 1863.	Decrease in 1863.
HORSES :				
Two years old and upwards,	506,817	497,301	—	9,516
One year old and under two,	52,153	47,641	—	4,512
Under one year,	43,924	35,036	—	8,888
Total No. of Horses,	602,894	579,978	—	22,916

Munster,	8	2	.	.	.	10	Connaught,	3	.	.	.	.	3

The mills in Ireland used for scutching flax in 1863, as given in the above Table, amounted to 1,080, being an increase of 20 compared with the number in 1862. 1,055 of these mills were situated in Ulster, 12 in Leinster, 10 in Munster, and 3 in Connaught.

Of the total number of scutching mills, 971 were propelled by water; 58 by steam; 29 by water and steam; 16 were wind-mills; and 6 were worked by horses.

The county, barony, and townland in which each mill is situated will be found at page 203 of this Report.

EMIGRATION FROM IRISH PORTS IN 1863.

Emigration from Irish Ports.

The total number of persons who emigrated from Ireland during the year 1863, *who stated it was not their intention to return*, amounted to 117,820—61,690 males and 56,130 females,—being an increase of 45,090 persons compared with 1862.

TABLE XXIV.—The following Table shows the Emigration from each Province during 1862 and 1863 :—

RESIDENTS OF	Males.		Females.		TOTAL.	
	1862.	1863.	1862.	1863.	1862.	1863.

As to the ages of the emigrants in 1863, including both sexes, 19,966—or 16·9 per cent., were under 15 years of age; 76,523—or 65 per cent., were from 15 to 35; 13,795—or 11·7 per cent., were 35 years old and upwards; and the ages of the remaining 7,536—or 6·4 per cent., were not ascertained.

In conclusion, I have the honour to acquaint your Excellency, that the information necessary for the compilation of these Returns has, with a few exceptions, been readily afforded to the Enumerators by the landed proprietors, tenant farmers, and owners of stock, to all of whom I have to express my respectful acknowledgments; to the Clergy of all Denominations I am much indebted for their continued support; and also to the metropolitan and provincial press for making known the object for which these Statistics have been collected; and it is very satisfactory to me to state that the members of the Constabulary and Metropolitan Police, who were selected to act as Enumerators, performed this duty in their usual efficient manner.

I have the honour to be,

Your Excellency's

Very faithful servant,

WILLIAM DONNELLY.
Registrar-General.

HENRY WILKIE,
Chief Clerk.

AGRICULTURAL AND EMIGRATION STATISTICS' OFFICE,
5, HENRIETTA-STREET, DUBLIN,
10*th September*, 1864.

Beans and Pease were included in the same column in the Returns up to the year 1851. The produce of Flax in 1847 was estimated at 48 stones per statute acre. There was not any return of produce for Cabbage in 1847, as the extent of land under that crop was entered under the head of "Other Green Crops" in the Enumerators' returns.

Copy of the Form used in taking the Returns of Emigrants at the different Ports of Ireland, . 24

AGRICULTURAL STATISTICS, IRELAND.

THE ESTIMATED AVERAGE PRODUCE OF THE CROPS;

ALSO,

THE EMIGRATION FROM IRELAND IN THE YEAR 1864.

TO HIS EXCELLENCY JOHN, BARON WODEHOUSE,

LORD LIEUTENANT-GENERAL AND GENERAL GOVERNOR OF IRELAND.

&c. &c. &c.

MAY IT PLEASE YOUR EXCELLENCY,

On the 26th of last September I had the honour of submitting General Abstracts of the Agricultural Statistics of Ireland for the year 1864; I now beg to submit the accompanying Tables, which show the *estimated average* yield of the crops for 1863 and 1864 in each county and province; also the number, age, and sex of the emigrants who left the different counties during 1864; and the ports at which they embarked.

The information as to the *average* produce was compiled, as in former years, from Returns of the acreable yield of the crops grown in each Electoral Division throughout the country, procured by Enumerators selected from the Constabulary Force, for their intelligence and fitness for the duty. The names and addresses of all persons affording the particulars for each locality are stated on the forms. On the receipt of the returns at this Office they were copied and forwarded to the Boards of Guardians of each Union for their consideration; and it is satisfactory to state, that out of 3,438 Electoral Divisions, the returns of the average produce for 2,612 were revised by them. Copies of the Circulars and Forms used are given at pages 23 and 24.

Acreage under Crops.

According to the revised Returns of the acreage in 1864, there has been an increase of 12,421 acres under tillage in 1864 compared with the previous year. Cereals decreased by 121,782 acres,—wheat, barley, bere, and rye having increased to the extent of 17,215 acres, and oats decreased to the amount of 138,997 acres. The decrease in the area under oats was not confined to any particular locality, but extended to every county. In potatoes there was an increase of 16,310 acres. Turnips, mangel wurzel, and cabbage, taken collectively, decreased by 18,632 acres. The acreage under flax in 1864 amounted to 301,693 acres, being an increase of 87,594 acres compared with 1863, the largest extent sown in any year since 1847, when these returns were first collected. This increase, as might be expected, was principally in Ulster, where it amounted to 70,796 acres,—in Connaught the increase was 6,110 acres,—and in Munster and Leinster, 5,398 and 5,290 acres, respectively. The area occupied by meadow and clover was 1,560,638 acres in 1863, and in 1864, 1,609,569, being an increase of 48,931 acres.

Estimated Produce per statute acre.

In the *estimated* produce of the crops per statute acre, there has been a decrease of 0·2 cwt. in wheat, of 0·7 cwt. in oats, and of 2·1 cwts. in rye, and an increase of 0·6 cwt. in bere. The acreable yield of potatoes increased by 0·7 ton; turnips decreased by 1·6 ton, mangel wurzel by 0·8, and cabbage by 0·7 ton. In flax there was an increase of 2·3 stones; meadow and clover diminished by 0·2 ton per statute acre.

Total produce of the Crops.

With respect to the *total* produce, there has been a falling off in cereals of 1,062,704 quarters in 1864 compared with 1863, this decrease was caused not only by the diminished area under oats, but also by the decrease in the acreable yield causing a diminution of 1,102,339 quarters in the produce of this crop alone. In wheat there was an increase

Total produce of the Crops.

of 37,876 quarters; in barley of 3,380; and in bere of 1,194; and a decrease of 2,815 quarters in rye. In the produce of potatoes there was an increase of 866,439 tons, attributable to a greater acreage under this crop in 1864, and also to an increased yield. The produce of turnips, mangel wurzel, and cabbage diminished by 798,988 tons. In flax there was a large increase amounting to 21,860 tons, owing to the increased area and a more abundant yield. The produce of hay diminished by 154,880 tons, in consequence of the decrease in the acreable yield.

TABLE I.—The extent under each of the principal Crops in 1863 and 1864, and the increase or decrease in the latter year.

Crops.	Extent Cultivated in		Increase or Decrease in 1864.	
	1863.	1864.	Increase.	Decrease.
	Acres.	Acres.	Acres.	Acres.
Wheat,	260,311	276,483	16,172	.
Oats,	1,953,883	1,814,886	.	138,997
Barley,	171,892	172,700	808	.
Bere and Rye,	8,659	8,894	235	.
Potatoes,	1,023,414	1,039,724	16,310	.
Turnips,	351,436	337,355	.	14,081
Mangel Wurzel,	16,320	14,073	.	2,247
Cabbage,	34,125	31,821	.	2,304
Flax,	214,099	301,693	87,594	.
Hay,	1,560,638	1,609,569	48,931	.
Total Increase,				12,421

TABLE II.—The *estimated produce* per statute acre of the principal Crops in 1863 and 1864, and the increase or decrease in 1864.

Crops.	Produce per Acre.		Increase or Decrease in 1864.	
	1863.	1864.	Increase.	Decrease.
Wheat, in Cwts.	13·5	13·3	.	0·2
Oats, „	12·8	12·1	.	0·7
Barley, „	15·9	15·9	.	.
Bere, „	15·8	16·4	·6	.
Rye, „	10·6	8·5	.	2·1
Potatoes, in Tons,	3·4	4·1	·7	.
Turnips, „	11·9	10·3	.	1·6
Mangel Wurzel, in Tons,	11.3	10·5	.	·8
Cabbage, in Tons,	10·0	9·3	.	·7
Flax, in Stones of 14 lbs.,	31·9	34·2	2·3	.
Hay, in Tons,	1·8	1·6	.	·2

TABLE III.—The total produce of the principal Crops grown in 1863 and 1864, and the increase or decrease in the latter year.

Crops.	Estimated Produce.		Increase or Decrease in 1864.	
	1863.	1864.	Increase.	Decrease.
	Quarters.	Quarters.	Quarters.	Quarters.
Wheat,	837,906	875,782	37,876	.
Oats,	8,928,671	7,826,332	.	1,102,339
Barley,	758,529	761,909	3,380	.
Bere,	13,966	15,160	1,194	.
Rye,	15,495	12,680	.	2,815
	Tons.	Tons.	Tons.	Tons.
Potatoes,	3,445,949	4,312,388	866,439	.
Turnips,	4,183,672	3,467,659	.	716,013
Mangel Wurzel,	185,222	147,284	.	37,938
Cabbage,	342,412	297,375	.	45,037
Flax,	42,646	64,506	21,860	.
Hay,	2,762,033	2,607,153	.	154,880

Acreable yield of the Crops in 1863 and 1864.

TABLE IV.—The *average acreable yield* of the principal Crops in 1863 and 1864, by Counties and Provinces :—

COUNTIES AND PROVINCES.		ESTIMATED AVERAGE YIELD PER STATUTE ACRE.										
		Wheat, in cwts.	Oats, in cwts.	Barley, in cwts.	Bere, in cwts.	Rye, in cwts.	Potatoes, in tons.	Turnips, in tons.	Mangel Wurzel, in tons.	Cabbage, in tons.	Flax, in stones of 14 lbs.	Hay, in tons.

METEOROLOGICAL OBSERVATIONS.

Meteorological observations.

In connexion with these statistics, I beg to give the following abstract of the Meteorological Observations taken at the Ordnance Survey Office, Phœnix Park, Dublin, with which I have been kindly furnished by Captain Wilkinson, R.E.

The mean temperature of the thermometer in 1864, according to this abstract, was 49°, being 0·8° lower than in 1863. The highest reading of the barometer, corrected and reduced to 32° Fahrenheit, was 30·587 inches on the 6th of November, at 9.30, A.M., wind S.E.; the lowest reading was 28·390 on the 13th of November, at 9.30, A.M., wind S.E. The highest temperature in air during the year was 81·4° on the 14th of August, and the lowest 14·8° on the 6th of January; the highest in 1863 was 80·4° on the 11th July, and the lowest 26·° on the 12th of February. Rain fell on 197 days; the greatest rain-fall in 24 hours was 1·696 inches on the 21st of October, the wind blowing from the N.E. The prevailing wind was S.W., from which quarter it blew 93 days. The strongest winds were on the 13th of February, the 28th of March, the 31st July, and the 9th of September, the pressure being 20·25 lbs. per square foot. The mean number of days in each month the sky was overcast with cloud was 13.

EMIGRATION FROM IRISH PORTS IN 1864.

Emigration from Irish Ports.

The emigration from Irish Ports during the year 1864, amounted to 114,903 persons—of whom 61,125 were males and 53,778 females, being a decrease of 2,917, compared with the previous year; this number includes 734 persons, natives of other countries, who embarked at Irish Ports.

TABLE VII.—The Emigration from each Province during 1863 and 1864 :—

Emigration from Irish Ports.

The following Table gives the number and ages of the Emigrants from each Province, and from all Ireland, by which it will be seen that of the total number who emigrated during the year 1864, 48,397, were from Munster; 19,853, from Ulster; 19,790, from Leinster; and 18,121, from Connaught; the Provinces from which 8,008 Emigrants came were not ascertained.

Respecting the ages of the emigrants, 19,804, or 17·2 per cent., were under 15 years of age; 72,207, or 62·9 per cent., were from 15 to 35; 14,152, or 12·3 per cent., were 35 years of age and upwards; and the ages of the remaining 8,740, or 7·6 per cent., were not specified.

TABLE IX.—NUMBER and AGES of EMIGRANTS from each Province, and from all Ireland, during 1864:—

In conclusion, I have to express my respectful acknowledgments to the landed proprietors and tenant-farmers of Ireland, who so willingly furnished the Enumerators with the information necessary to ascertain the Rates of Produce,—to the many Poor Law Guardians who so kindly assisted in the revision of them,—and to the Metropolitan and Provincial Press, for their valuable aid in making known the importance of these Statistics. The members of the Constabulary and Metropolitan Police who were appointed to act as Enumerators, discharged this duty in their usual efficient manner.

I have the honour to be,

Your Excellency's

Very faithful servant,

WILLIAM DONNELLY,

Registrar-General.

CIRCULARS

AND

COPIES OF THE FORMS USED IN OBTAINING THE AVERAGE YIELD OF THE CROPS PER ACRE, FOR 1864.

General Register Office,
5, Henrietta-street, Dublin,
20th October, 1864.

SIR,

You will receive herewith blank copies of "Form C," referred to in the "General Instructions" addressed to the Enumerators on the 18th of last May, in order to enable you to procure Returns of the *Rates of Produce* of the various Crops grown in *each* of the *Electoral Divisions* mentioned in the enclosed List,—which should be sent back to this Office with these Returns—*in one file*—when completed.

I beg you will be so good as to select for this service Enumerators known to you for their intelligence and acquaintance with the parties resident in the *Electoral Divisions* for which the Returns are required. Instructions as to the method of filling the Forms are printed on them. *Pray direct the Enumerators to pay particular attention to these instructions.*

From the friendly co-operation and assistance afforded to the Enumerators by all ranks and classes when collecting the Agricultural Returns for this year, I confidently trust that by making inquiries from the resident Gentry, Clergy, and intelligent Farmers in the District, a valuable approximation will be arrived at as to the *average* Rates of Produce per Acre of the various kinds of Grain, Potatoes, and other Crops grown in the several Electoral Divisions;—that being the object of this Return,—to which *accuracy, as far as possible*, can alone give any real value.

Your attention is particularly requested to this subject, in consequence of the increasing importance of Agricultural Statistics, and I trust you will be enabled to forward the Returns for your District to this Office before the 10th of November, in order that a General Abstract of the results may be compiled and submitted for the consideration of His Excellency the Lord Lieutenant.

It is my intention, as in former years, to solicit the assistance of the Boards of Guardians on this difficult question, in order to procure their opinions as to the Rates of Produce in the several Electoral Divisions. This information will form a valuable auxiliary to that obtained through the Constabulary.

I am, Sir,

Your obedient servant,

WILLIAM DONNELLY, *Registrar-General.*

To the Sub-Inspector of Constabulary

at———

FORM C.—AGRICULTURAL STATISTICS—IRELAND, 1864.

County of——— *Union of* ———
Constabulary District of——— *Electoral Division of* ———

RETURN showing the Estimated *Average* Produce per *English* and *Irish* Acre, of the following Crops in the Electoral Division of ———.

CROPS.	Produce of the Electoral Division.		Name and Address of Person from whom the information was obtained.
	Per *English* or Statute Acre.	Per **Irish* Acre.	
Wheat, in cwts. of 112 lbs.,			
Oats, do. do.			
Barley, do. do.			
Bere, do. do.			
Rye, do. do.			
Beans, do. do.			
Pease, do. do.			
Potatoes, do. do.			
Turnips, in tons, . .			
Mangel Wurzel, do., . .			
Carrots, do., . .			
Cabbage, do., . .			
Green Vetches (*for feeding purposes*), in tons, . .			
Flax, scutched, in stones of 14lbs.			
Rape Seed, in cwts. of 112 lbs.,			
Rape (*for feeding purposes*), in tons, ...			
Hay, in tons, . . .			

* NOTE.—The *Irish* Acre is equal to 1A. 2R. 19P. *English* or *Statute* Measure.

I certify that I have procured the Information contained in the foregoing Return from the Persons above named, who in my opinion were well qualified to give it, and I believe the Estimated *Average* Rates of Produce to be correct. Dated at ——— this ——— day of ———, 1864.

(*Signature of the person by whom the information was obtained*), ———

I believe the foregoing Return to be correct.
——— *Sub-Inspector.*

INSTRUCTIONS.

1. In filling in the Rate of Produce, the *yield* will be stated per *Irish* and also per *English* or *Statute* Acre, for *each* Crop, *and the Enumerator will be careful to enter the Rate in the Weights* (Act 25 and 26 Vict., cap. 76) mentioned opposite to the respective Crops named on the other side of this Form. It is particularly to be borne in mind that the average yield per Acre is for the *entire* Electoral Division—not for any individual Farm or portion of the Electoral Division.

2. One Form will be filled by the Enumerator for *each Electoral Division*, as per List furnished to the Sub-Inspector.

3. The information as to the probable yield of the Electoral Division for which the Return is made, should be procured from intelligent Landholders of the District, whose Names and Addresses will be stated in the column left for that purpose.

4. The greatest care should be taken in filling these Forms, and the information should be procured and the Return sent to the Sub-Inspector of the District, on the 10th of November—sooner if practicable.

5. In those parts of the country in which the *Cun-*

ningham Measure is used, the word "*Irish*" may be erased with the pen, and the word "*Cunningham*" substituted at the head of the column. A *Cunningham* Acre is equal to 1A. 1R. 6P. *English* or *Statute* Measure.

WILLIAM DONNELLY, *Registrar-General.*

General Register Office,
5, Henrietta-street, Dublin,
October, 1864.

General Register Office,
Henrietta-street, Dublin,
14th November, 1864.

GENTLEMEN,

I beg to enclose copies of Returns showing the *estimated average produce* by the *English*, and also by the *Irish* Acre, of the various crops grown in 1864, within each Electoral Division of the Union of in order to procure from the Guardians their opinion as to whether the AVERAGE PRODUCE per Acre,—obtained by the Enumerators from resident Landholders,—fairly represents the yield of the respective crops.

In case the Guardian signing the Return considers any *rate* entered upon it to be *above* or *below* what it should be, columns are provided in which to insert the *corrected rate*.

As these Forms may be filled without much trouble, I shall feel much obliged if the Guardians will be so good as to favour me with their opinion respecting the produce of the various crops in their Union, and thus aid in increasing the value of these Returns, which are of so much general importance to the community.

May I request you will be so good as to give directions to the Clerk of your Board to *return these Forms to me as soon as possible*, as they are required to assist in compiling for publication the Table of *estimated* average produce of the Crops in 1864.

In case it is inconvenient to obtain the signature of an Ex-Officio or Elected Guardian, particularly connected with any Electoral Division, the signature of any other Guardian acquainted with the District will be sufficient;—or, if these *rates of produce* are discussed and decided upon at a Meeting of the Board, the signature of the Chairman, or of the Clerk, with his approbation, will answer the purpose.

I take this opportunity of expressing my obligations to the many Guardians who were so kind as to assist me in the revision of the Returns of Produce in 1863, and I trust that, on public grounds, I may be excused for soliciting the opinion of your Board on this subject.

Communications to this Office NEED NOT be prepaid.

I am, Gentlemen, your faithful servant,

WILLIAM DONNELLY, *Registrar-General.*

To the Chairman and Board of Guardians of the Union of ———

AGRICULTURAL STATISTICS—IRELAND, 1864.

RATES OF PRODUCE.

Union of ——— *Electoral Division of* ———

RETURN of the AVERAGE RATES of PRODUCE of the undermentioned Crops, as made by the Constabulary Enumerators, submitted for the opinion of the Guardians of the Union of ———.

CROPS.	*Average Produce* as returned by the Constabulary Enumerators.		*Corrected* Average Produce *according to the opinion of the Guardians.*	
	Per *English* or *Statute* Acre.	Per *Irish* Acre.	Per *Irish* Acre.	Per *English* or *Statute* Acre.
Wheat, in cwts. of 112 lbs.,				
Oats, do. do.				
Barley, do. do.				
Bere, do. do.				
Rye, do. do.				
Beans, do. do.				
Pease, do. do.				
Potatoes, do. do.				
Turnips, in tons, . .				
Mangel Wurzel, do., . .				
Carrots, do., . .				
Cabbage, do., . .				
Green Vetches (*for feeding purposes*), in tons, . .				
Flax, in stones of 14 lbs., .				
Rape Seed, in cwts. of 112 lbs.,				
Rape (*for feeding purposes*), in tons, ...				
Hay, in tons, . . .				

In my opinion, the Average Rates of Produce returned by the Constabulary Enumerators for the Electoral Division of ——— are fairly stated, except for those Crops opposite to which an amended Rate is given.

Signature of Guardian ——— *Date* ———

The Registrar-General requests that the Guardian to whom this Form is forwarded for revision will be so good as to return it to the Clerk of the Union, signed and dated, at his EARLIEST convenience, for transmission to the General Register Office, Dublin.

EMIGRATION.

COPY of the FORM used in taking an Account of the Emigrants from the different Ports of Ireland.

EMIGRANT RETURN. EMIGRATION FROM IRELAND, 1864.

County of ——— *Constabulary District of* ——— *Port of* ———

RETURN of all Emigrants and Passengers who left this Port on board the ———, bound for ———, on the —— day of ———, 1864.

In filling this Return observe the Instructions for Enumeration of Emigrants, in Circular No. 9.

Nos.	NAMES OF EMIGRANTS AND PASSENGERS.		AGE.		SEX.		INTENDED PERIOD OF EMIGRATION.		RANK, PROFESSION, OR OCCUPATION.	WHENCE.	WHERE GOING TO.
